

6335

OR, AN EXPOSITION UPON Sir George Ripley's Hermetico-Poetical WORKS.

Containing the plainest and most excellent Discoveries of the most hidden Secrets of the Ancient Philosophers, that were ever yet Published.

Written by EIRENÆUS PHILALETHES an Englishman, stiling himself Citizen of the World.

LONDON, Printed by Tho. Ratcliff and Nat. Thompson, for William Cooper at the Pelican in Little-Britain: 1678.

THE Author's Preface TO HIS EXPOSITIONS UPON Sir GEORGE RIPLET'S Compound of Alchymy, &c.

and the second

His Canon of Bridlington flourished in the days of Edward the Fourth, King of England, to whom he wrote an Epistle,

as in the beginning of this Book appeareth : a true Artift he was, as every one who hath attained the knowledge in this Maftery can teftifie. He wrote among other Writings, these Twelve Gates of Alchy-* 3

my, which with the Preface, Recapitulation, Erroneous Experiments by him warned of, his Epistle to the King, Vision, and Wheel, I shall unfold.

For his Experience herein he was eminent, yea his Writings indeed are, in my opinion, for the fulnels of them, and eminent descriptions of things, to be preferred before any that I have read or seen, yet I have seen many.

I would detract from no candid well-deferving Author, but would ingenuoufly give them their due; yet *Ripley* to me feems to carry the Garland.

For mine own part, I have caule to honour Bernard Trewisan, who is very ingenious, as in all his Writings, so especially in that Epifile of his to Thomas of Bononia, in which

n

h

which let me ferioufly profefs, I receiv'd the main Light in this hidden Secret. I fhall not name the place, but read the Epiftle, and read it again and again, for in it is most excellent truth, and Naked truth.

Next to him, or rather before him in fome respects, is an Author whom I will not name; yet truly all Chymical Writers are therein to be preferred by any man, by how far he gets good by them : one commends *Raymond Lully* before all, yet I remember not that ever I got good by reading of him : fome in good footh, who are not Profession of this Secret, write more edifyingly to the informing of a *Tyro*, then those whom skill hath made crafty, especially in such places where they intend nothing

, less

less then to discover fuch Secrets : I learned the Secret of the Philolophers Magnes, from one ; of their Magical Chalybs, from another; the ule of Diana's Doves, from a third ; the Air, or rather the Camelion of the Philosophers, from another; the gross Preparation of their Menstruum, in another; the number of Eagles, in another : but for operation on the true Matter, and figns. of the true Mercury, I know none like Ripley, though Flammel be eminent. I know what I fay, as knowing experimentally the truth, and what is errour.

For mine own part, I have had experience of milleading Sophiftical Writers, and have made many toylfom laborious Experiments, though but young ; and therefore having at length, through the undeferved

The Anthor's Preface.

deferved mercy of God, arrived at my Haven of Reft, I shall stretch out my hand to such as are behind.

I have wrote leveral Treatiles, fome in English, but especially in Latine; one English Treatise touching the Stone, very plainly written, but not perseded, unfortunately flipt out of my hand, and perhaps may come abroad into the World; if it do, I should be forry. Two Latine Tractates, one intituled, Brevis manuductio ad Rubinum Cælestem, another, Fons Chymice Philosophia, I wrote, which for especial Reasons to me known I resolve to suppress. Two other Latine Treatifes, the one intituled, Ars Metallorum Nietamorphofeas, the other, Introitus apertus ad occlusum Regis Palatium, I lately wrote, which

The Author's Preface.

which perhaps thou mayst enjoy. Two English Poems I wrote, declaring the whole Secret, which are lost. Also an Enchiridion of Experiments, together with a Diurnal of Meditations, in which were many Philosophical Receipts declaring the whole Secret, with an Ænigma annexed; which also fell into such hands, who I conceive will never restore it. This last was written in English, with many other which I wrote for mine own recreation, and asterwards burned.

But now at length fludying how to profit the Sons of Art to my utmost, I have rather resolved to unfold *Ripley's* Knots, and so thou mayst have two Witnesses in one; for by the unfolding of him thou shalt both see the depth of the Man,

Man, and difcern that both he and I were truly, and not Sophiftically, intrusted with this Divine Science and Art; in which it is not notional, as many men conceive the Art to be, but real Experiments of Nature, taught me by the only God and Master of Nature, that was my Guide; having feen and made the Secret Water of the Philosophers, and known the use of it by ocular experience, to the effecting of the admirable Elixir. These Writings peruse, for they are not Fancies, and fo with the help of the most High, thou shalt attain thy wish.

AN

verti

"He Compound of Alchymy which Seems to be most made use of in this Book for Quotations, agrees for the most part with the Edition published by Ralph Rabbards, and Printed at London 1591. in 4º. in which Edition the English is not fo old as is that Copy which was published by Elias Ash-

mole Ffq; 2 : Tet I laborious Collection of our humbly conceive that Ancient English Hermetick Authors, called Theatrum this Expositor bath Chymicum Britannicum,

a In his most excellent and Printed at London 1652.

in 40. with his learned and ingenious Obfervations upon the fame. And I heartily with that the learned Philofophers of our Age, could prevail with him to publish his fecond Vohume of that Collection, which he had almost finished near twenty years fince, (as I had it from his own mouth) and hath lain afleep ever fince, and likely fo to lie; for to the perfecting thereof he is now unwilling to be brought, unlefs fome worthy Friend of his can be wrought upon to prevail with him, before the fleep of death feizes him, and leaves those rare pieces of Antiquity to be inevitably loft, to the prejudice of all Philosophers, and great diffionour of the English Nation and Starsin St.

thought

thought fit to clear the sence of the old English Verse, by the change of some few words, more fignificant to the prefent speech, and yet doubtless not differing from the mind of the Author 3 which change of words, I durst not presume to alter, but that I ought rather in justice to the Author to let them pass; and for this reason like-mile, that whom soever shall defire to see the difference, may eafily compare all three together, becanfe they are all published in Prints. and in performing this service, I hope I have done my duty faithfully, and wronged no body. I likewife make bold to acquaint the Reader, that in the Exposition upon Sir G. Ripley's Preface, in the Learned Sophies Fealt, pag. 52. line 5. I find this word [greatest,] which from what follows line 11. (I humbly conceive, with submi (fion) should be [meanest,] as may more. manifestly appear from the same Author, in his Secrets Reveal'd, pag. 62, 63. and in Sir G. Ripley's 5th. Gate, Stave 40. line 6. But because I found it [greatest price] in two Copies. I therefore left it fo, and by this Advertisement submit it to the Readers Judgment. I have likewise found, that in ti care ba the

LUBERIN NELS

Louis / edulation King Edward the Fourth, The Cold in the Co LDED.

His Epiftle as it was immediately written to a King, who was in his Generation, both wife and valiant; fo it doth comprize the whole fecret, both learnedly

described, and yet artificially vailed. Yet as the Author teftifieth, that in this Epiftle he doth plainly untie the main knot; So I can, and do teltifie with him, that there is nothing defirable for the

A 2

true

An Exposition upon

true attaining of this Mystery, both in the Theory and Practick of it, which is not in this fhort Epiftle fully taught. This then I intend as a Key to all my former writings, and affure you on my faithful word, that I shall not speak one word doubtfully or Mystically, as I have in all my other writings, feeming to aver fome things, which taken without a Figure, are utterly falle, which we did only to conceal this Art. This Key therefore we intend not to make common; and shall intreat you to keep it fecret to your felf, and not to communicate it, except it be to a fure friend, who you are confident will not make it publick : And this requeft we make upon very good grounds, knowing that all our writings together, are nothing to this, by reafon of the contradictions, which we have woven into them, which here is not done in the least measure. I shall therefore in this Epistle take up a new Method, and that different from the former, and shall first draw up the fubstance of the Philosophy couched in this Epiftle, into feveral conclusions, and after elucidate the fame.

The

the

m

it

int

po

Sir G. Ripley's Epistle.

The first Conclusion is drawn from the Ninth Stave of this Epiftle, the eight first Staves being only complementall; and that is, That as all things are multiplied in their kind, so may be Metalls, which have in themselves a capacity of being transmuted, the imperfect into perfect.

The fecond Conclusion in the Tenth Stave is, That the main ground for the poffibility of transmutation, is the poffibility of reduction of all Metalls, and fuch Minerals as are of metallick principles, into their first Mercurial matter.

The third Conclusion is in the Eleventh Stave, that among fo many Metaline and Mineral Sulphurs, and fo many Mercuries there are but two Sulphurs that are related to our work, which Sulphurs have their Mercuries effentially united to them.

The fourth Conclusion from the fame Stave is, That he who understands these two Sulphurs & Mercuries aright, shal find that the one is the most pure red Sulphur of Gold, which is Sulphur in manifesto, and Mercurius in occulto, and that other 15

A 3

An Exposition upon

is most pure white Mercury, which is indeed true Quicksilver in manifesto, and Sulphur in occulto, these are our two Principles.

\$1

The fifth Conclusion from the Twelfth Stave is, That if a mans Principles be true, and his Operations regular, his Event will be certain, which Event is no other then the true Mystery.

These Conclusions are but few in number, but of great weight or concernment; the Amplification, Illustration and Elucidation therefore of them, will make a fon of Art truly glad.

The second states of the second states and the second states and the second states and the second states and the second states are second states and the second states are second are se

STAVE IX. In the Edition 1591: but in Efq: Assence's Theatrum it is Stave 8.

But notwithstanding for peril that may befall,

If I dare not here plainly the knot unbind, Tet in my writing I will not be fo mysticall, But that by study the true Knowledge you may find

How that each thing is multiplyed in its kind,

- And how the likeness of Bodies Metalline be transmutable,
- I will declare, that if you feel me in your mind,

My writing you shall find true, and no fained Fable.

FOr the First; Forasmuch as it is not for our purpose here to invite any to the Art, only intending to lead and guide the sons of Art; We shall not prove the possibility of *Alchymy*, by many Arguments, having done it abundantly in another Treatife. He then that will be incredulous, let him be incredu-A 4 lous;

An Exposition upon

feth

mil

T

6

loas; he that will cavil, let him cavil; But he whole mind is perfwaded of the truth of this Art, and of its Dignity, let him attend to what is in the Illustration of these Five Conclusions discovered, and his heart shall certainly rejoyce. We shall therefore briefly Illustrate this 1 ft. Conclusion, and infiss there more largely, where the secrets of the Art are most couched.

For this first, which concludes in effect the truth of the Art, and its validity; he that would therein be more fatisfied in it, let him read the *Testimony of the Philosophers*: And he that will not believe the Testimony of so many men, being most of them men of renown in their own times, he will cavil also against all other Arguments.

We fhall only hold to *Ripley's* Teftimony in this our Key, who in the Fourth Stave, affures the King that at *Lovain* he first faw the greatest and most perfect secrets, namely, the two*Elixirs*; and in his following Verses, craved his confident credit, that he himself hath truly found the way of secret *Alchymy*, and promifeth Sir G. Ripley's Epiftle. 7 feth the difcovery of it to the King, only upon condition of fecrecy.

5

1

t

2.

-

ie

And in the Eighth Stave, though he protefts never to write it by Pen, yet proffers the King at his pleafure, to flew him occularly the Red and White *Elixir*, and the working of them, which he promifeth will be done for eafle cofts in time So then, he that will doubt the truth of this Art, must account this Famous Author for a most fimple mad Sophister, to write and offer fuch things to his Prince, unlefs he were able in effect to do what he promifed ; from which imputation, his Writings, and also the History of him, of his Fame, Gravity, and Worth, will fufficiently clear him.

STAVE X.

An Exposition upon

8

STAVE X.

As the Philosopher in the Book of Meteors doth write, The likeness of Bodies Metalline be not

tranjmutable, But after he added these words of more delight,

Without they be reduced to their beginning materiable.

Wherefore such Bodies which in Nature be liquiable,

Mineral & Metalline may be Mercurizate, Conceive you may this Science is not opinionable,

But very true, by Raymond and others determinate.

W^E come to the fecond Conclusion; the fubstance of which is, that all Metalls, and Fodies of Metalline Principles, may be reduced to their first Mercurial Matter; And this is the main and chief ground for the possibility of Transmutation. On this we must infist largly and fully, for (trust me) this is the very hinge on which our fecrets hang.

rft,

This Sulphur is not wanting even in common Argent Vive, by the Mediation of which, it may be precipitated into the form of a drie Powder : Yea, and by a Liquor well known to us, (though nothing helping the Art of Transmutation) it may be fo fixed, that it may endure all Fires, the Teft and Coppel, and this without the addition of any thing to it, but the Liquor (by virtue whereof it is fixed) coming away intire, both in its Pandus and Virtue. This Sulphur in Gold and Silver is pure, in the other Metalls less pure; Therefore in Gold and Silver it is fixed, in others it is fugitive; in all the Metalls it is coagulated, in Mercury or Argent Vive, it is coagulable, in Gold, Silver and Mercury; this Sulphur is fo ftrongly united, that the Antients did ever

ever judge Sulphur and Mercury, to be all one; but we by the help of a Liquor, the Invention of which in these parts of the world we owe to Paracelfus, (though among the Moors and Arabians, it hath been, and is (at this day) commonly known to the acuter fort of Chymifts.) By this I fay, we know that the Sulphur which is in Mercury coagulable, and in the Metals coagulated, is external to the Internal nature of Mercury, and may may be separated in the form of a tincted Metallick Oyl, the remaining Mercury being then void of all Sulphur, fave that which may be called its Inward or Central Sulphur, and is now incoagulable of it self, (though by our *Elixir* it is to be coagulated) but of it felf, it can neither be fixt nor precipitated, nor fublimed, but remains un-altered in all corrolive waters, and in all digestions of heat. One way then of Mercury Azating all Metals and Minerals, is by the Liquor Alchaheft, which out of all fuch Bodies as have Mercury in their Constitution, can separate a running Argent Vive, from which Argent vive all its Sulphur is then separated, fave that

Sir G. Ripley's Epistle. that only which is Internal and Central to the Mercury, which Internal Sulphur of Mercury no corrofive can touch : Next to this way of universal Reduction, there are also some other particular ways by which Saturn, Jupiter, Antimony, yea even Venus and Mars may be reduced into a running Quick-filver, by the help of Salts, which because (being corporeal) they pierce not fo radically as the fore-named Liquor. doth; they therefore do not spoil the Mercury of its Sulphur, but that as much Sulphur as there in is Common Mercury; fo much also there in is this Mercury of the Bodies, only this Mercury hath specificated qualities according to the nature of the Metal or Mineral, from which it was extracted; and for that realon, fas to our work which is to diffolve perfect Species of Metals,) it hath no more virtue then common Argent Vive. There is than but one only humidity, which is applicable unto our Work, which certainly is neither of Saturn nor Venus, not is drawn from any thing, which nature hath formed, but from a substance compounded by the Art of the Philosopher. So

So then, if a Mercury drawn from the Bodies, have not only the fame deficiency of heat and fuperfluity of faces as Common Mercury hath, but also a diffinct specificated form, it must (by reason of this its form) be so much the farther remote from our Mercury, then common Argent Vive is. Spro

Our Art therefore is to compound two Principles, (one in which the Salt, and another in which the Sulphur of Nature doth abound,) which are not yet perfect, nor yet totally imperfect, and (by confequence) may therefore (by our Art) be changed or exalted, which that (which is totally perfect) cannot be; and then by Common Mercury to extract not the Pondus, but the Coelestial virtue out of the compound; which virtue (being Fermental) begets in the common Mercury an Offfpring more noble then it felf, which is our true Hermaphrodite, which will congeal it felf, and diffolve the Bodies : Observe but a grainof Corn, in which, scarce a difcernable part is Sprout, and this Sprout, if it were out of the Grain, would die in a moment; the whole grain is fown, yet the **fprout**

Sir G. Ripley's Epistle. 12 Sprout only produceth the Herb : So is it in our Body, the Fermental Spirit that is in it, is scarce a third part of the whole, the reft is of no value, yet all is joyned, (in the composition,) and the faculent corporeous parts of the Body comes away with the dregs of the Mercury. But beyond the example or fimilitude given of a grain of Corn, it may be observed that the hidden and spiritual virtue of this our Body, doth purge and purifie its Matrix of water, in which it is fown; that is, it makes it east forth a great quantity of filthy earth, and a great deal of Hydropical Saline moisture. For instance, make thy washings (for a tryal) with pure and clean Fountain water; weigh first a Pint of the fame water , and take the exact weight of it; then walk thy compound 8 or 10 Eagles (or times,) fave all the faces, weigh thy Body and Mercury exactly, weigh thy feces being very dry, then Diftil or Sublime all that will Sublime, a very little quick Mercury will afcend, then put the relidue of the faces in a Crucible, fet them on the Coals, and all the faculency of the Mercury will burn like a Coal, yet without

without fume; when that is all confumed, weigh the remaining faces, and thou shalt find them to be two thirds of thy Body, the other third being in the Mercury ; weigh the Mercury which thou Subliment, and the Mercury prepared by it felf, and the weight of both will not recompence thy Mercuries weight by far: So then, boyl up thy water to a skin, in which thou madeft thy Lotions, for that is a thick water; and in a cool place thou shalt have Crystals, which is the Salt of Mercury Crude, and no way fit for Medicines; Yet it is a content for the Artifts to fee how the Heterogeneities of Mercury are discovered, which no Art fave the Liquor of Alchahest can do, and that in a destructive, not a generative way as this is: for this operation of ours is made between Male and Female, within their own kind, between which there is a Ferment which effecteth that which no other thing in the world could do. . In all truth I tell you, that if you should take our imperfect compound Body, per le, and Mercury per Se, and Ferment them alone, though you might bring out of the one a

Sir G. Ripley's Epiftle.

IS

a most pure Sulphur, and out of the other Mercury of Mercury, which is the Nut of Mercury, yet with these thou couldest effect nothing, for Fermental virtue is the wonder of the world, and it is by it, that water becomes Herbs, Trees, and Plants, Fruits, Flefh, Blood, Stones, Minerals, and every thing; feek then for it only, and rejoyce in it, as in a defervedly invaluable treasure : Now know, that Fermentation works or ferments not out of kinds neither do Salts Ferment Metals. Wilt thou then know whence it is that fome fixt Alcalies do extract a Mercury out of Minerals, and out of the more imperfect Metals? Confider then, that in all these Bodies the Sulphur is not fo radically mixt and united, as it is in Silver and Gold. Now Sulphur is of kin to divers Alcalies, that are extraordinarily diffolved or melted with it, and by this means the Mercurial parts are disjoyned, and the Argent vive is by fire separated. The Mercury thus separated, is spoiled of its Sulphur when as indeed there needs, or is required only a depuration of the Sulphur by separating the impure from the pure; B but

but these Salts having separated the Sulphur, do leave the Mercury worfe; that is, more estranged from a Metallick nature than it was before; for in its Compolition that Sulphur of Saturn will not burn, but though it be Sublimed, Calcinated, made Sugar or Vitrified, yet by Fire and Fluxes it still returns to the fame it was in before; but its Sulphur being (as is aforefaid,) separated, will take fire if joyned with Salt-peter, even as common Sulphur doth, fo that the Salts act on the Sulphur of which they rob the Mercury, but on the Mercury they act not for want of Ferment, which is not to be found, but only amongst Homogeneal things. Therefore the Ferment of Bread Leavens not a Stone, nor doth the Ferment of any Animal or Vegetable, Ferment a Metal or Mineral. So then, though out of Gold thou mighteft obtain a Mercury by the help of the Liquor of the first Ens of Salt, yet that Mercury would never accomplish our work : whereas on the other fide Mercury made out of Gold by our Mercury, though there be three parts of our Mercury to one of Gold: This

Sir G. Ripley's Epiftles This Mercury I fay, will (by continual digeftion) accomplish the whole work ; marvel not then, that our Mercury is more powerful, which is prepared by Mercury: For certainly the Ferment, which cometh between the compound Body and the water, caufeth a death and a regeneration; it doth that, which nothing in the world can do: Besides it severs from Mercury a terrestreity which burns like a coal, and an Hydropical humour melting in common water, but the refidue is acuated by a Spirit of Life, which is our true embryonated Sulphur of our water, not visible, yet working visibly. We conclude then, that all operations for our Mercury, but by common Mercury, and our Body according to our Art, are erroneous, and will never produce our Mylterie, although they be otherwife, Mercun ries never fo wonderfully made. For as the Author of the New light, faith, No Water in any Island of the Philosophers was wholfom, but that which was drawn out of the reigns of Sol and Luna. Wilt thou know what that means, Mercury in its pondus and incombustibility is Gold fugitive B 2

STAVE XI.

In the faid Book the Philosopher Speaketh alfo. Therein if it please Your Highness for to read, Of divers Sulphurs, and effectally of two, And of two Mercuries joyned to them indeed. tot Whereby he doth true understanders lead, To the knowledge of the Principles which be only true, Both Red, Moist, Pure, and White, as I have espied, Which be nevertheless found but of very few.

ME now come to the Third Conclusion, which is, that among all Metalline and Mineral Sulphurs there are only Two that belong to our Work; which Two have their Mercuries effentially united with them : This is the truth of our fecrets, though we (to feduce the unwary) do feem to aver the contrary; for do not think that (because we do infinuate two ways, therefore) we really mean. B 3 as

19

as we fay, for verily (as witneffeth Ripley,) There is no true Principle but one, nor have we but one matter, nor but one way of working upon that matter, nor but one regimen of heat, and one linear way of proceeding.

Thefe two Sulphurs as they are Principles of our Work, they ought to be Homogeneal, for it is only Gold Spiritual that we feek; Firft White, then Red, which Gold is no other then that which the vulgar fee, but they know not the hidden Spirit that is in it. This Principle wants nothing but composition, and this composition must be made with our other crude white Sulphur, which is nothing but Mercury vulgar, by frequent cohobation of it upon our Hermaphroditical body, fo long till it become a fiery water.

Know therefore, that Mercury hath in it felf a Sulphur, which being un-active, our Art is to multiply in it a living active Sulphur, which comes out of the loins of our Hermaphroditical body, whole Father is a Metal, and his Mother a Mineral; Take then the most beloved Daughter of Saturn, whose Arms are a Circle Ar-

gent,

And in all truth I affure thee, that although thou hadft our Body Mercurialized (without the addition of Mercury, or of the Mercury of any of the Metals) made per se, that is, without the addition of Mercury, it would not be in the least profitable unto thee, for it is our Mercury only, which hath a Celeftial form and power, which it receives, not only, nor fo much from the Compound Body or Principles, as from the Fermental virtue which proceeds from the composition of both the Body and the Mercury, by which is produced a wonderful Creature : So then let all thy care be to marry Sulphur with Sulphur, that is our Mercury which is impregnated, which Sulphur must be espoused with our Sol, then hast thou two Sulphurs **B**4

22

Sulphurs married, and two Mercuries of one off-fpring, whole Father is the Sun, and Moon the Mother. thei

The Fourth Conclusion makes all perfectly plain which hath been faid before; namely, that these two Sulphurs are, the one most pure Red Sulphur of Gold, and the other of most pure clean White Mercury.

Thefe are our two Sulphurs; the one appears a coagulated Body, & yet carries its Mercury in its belly : the other is in all its proportions true Mercury, yet very clean, and carries its Sulphur within its felf, though hidden under the form and fluxibility of Mercury.

Sophifters are (here) in a Labyrinth, for becaule they are not acquainted with Metalline love, they work in things altogether heterogeneal,; or if they work upon Metalline Bodies, they yet either joyn Males with Males, or elfe Females with Females, or elfe they work on each alone; or elfe they take Males which are charged with natural inabilities, and Females whole Matrix is vitiated. Thus by their own inconfideration they fruftrate their

Sir G. Ripley's Epifile. 23

their own hopes, and then caft the blame upon the Art, when as indeed it is only to be imputed to their own folly, in not understanding the Philosophers.

eit

I know many pitiful Sophifters do dote on many Stones, Vegetable, Animal, and Mineral; and some to those add the fiery Angelical, Paradaical Stone, which they call a Wonder-working Effence; and because the mark they aim at is fo great, the ways also by which they would attain their scope, they make also agreeable, that is a double way; One way they call Via Humida, the other they call Via Sicca, (to use their languages:) The latter way is the Labyrinthian path, which is fit only for the great ones of the earth to tread in; the other the Dadalean Path, an easie way of small cost for the poor of the world to enterprize.

But this I know, and can teltifie, that there is but one way, and but only one *Regimen*, no more colours than ours; and what we fay or write otherwife, is but to deceive the unwary: For if every thing in the world ought to have its proper caufes, there cannot be any one end which

24

which is produced from two wayes of working on diffind Principles.

e

Therefore we proteft, and must again admonish the Reader, that (in our former writings) we have concealed much. by reason of the two ways we have infinuated, which we will briefly touch; There is one Work of ours, which is the Play of Children, and the Work of Women. and that is Decoction by the Fire; and we proteft that the lowest degree of this our work, that the matter be ftirred up, and may hourly circulate without fear; of breaking of the Veffel, which for this reason ought to be very strong; but our lineal Decoction is an Internal Work, which advances every day & hour, and is distinct from that of outward heat, and: therefore is both invisible and insensible. In this our work, our Diana is our body when it is mixed with the water, for then all is called the Moon; for Laton is whitened, and the Woman bears rule : our Diana hath a wood, for in the first days of the Stone, our Body after it is whitened grows vegetably. In this wood are at the last found two Doves; for about the

Sir G. Ripley's Epiftle. 25 the end of three weeks the Soul of the Mercury afcends with the Soul of the dif folved Gold; these are infolded in the everlasting Arms of Venus, for in this seafon the confections are all tincted with a pure green colour; These Doves are circulated seaven times, for in seaven is perfection, and they are left dead, for they then rife and move no more; our Body is then black like to a Crows Bill, for in this operation all is turned to Powder, blacker than the blackeft. Such passages as these we do oftentimes use when we speak of the Preparation of our Mercury; and this we do to deceive the fimple, and it is also for no other end that we confound our operations, speaking of one, when we ought to speak of another; For if this Art were but plainly set down, our operations would be contemptible even to the foolifh. Therefore believe me in this, that because our works are truly natural, we therefore do take the liberty to confound the Philosophers work with that which is purely Natures work, that fo we might keep the fimple in ignorance concerning

cerning our true Vinegre, which being unknown, their labour is wholly loft.

its

it

15

0

g

Let me then (for a close) fay only thus much; Take our Body which is Gold, and our Mercury which is feven times acuated by the marriage of it with our Hermaphroditical body which is a Chaos, and it is the folendor of the Soul of the God Mars, in the Earth and water of Saturn ; mix these two in fuch a Pondus as Nature doth require : in this mixture you have our invitible Fires, for in the Water, or in the Mercury is an active Sulphur or Mineral Fire, and in the Gold a dead, passive, but yet actual Sulphur; Now when that Sulphur of the Gold is ftirred up and quickned, there is made between the Fire of Nature which is in the Gold and the Fire against Nature, which is in the Mercury, a Fire partly of the one, and partly of the other, for it partakes of both ; and by these two Fires thus united into one, is cauled both Corruption (which is Humiliation) and Generation, (which is Glorification and Perfection.) Now know that God only governs this way of the Internal. Fire,

Sir G. Ripley's Epistle. 27

Fire, Man being ignorant of the progrefs thereof, only by his Reafon beholding its operations, he is able to difcern that it is hot; that is, that it doth perform the actions of heat, which is Decoction. In this Fire there is no Sublimation, for Sublimation is an Exaltation; But this Fire is fuch an Exaltation, that it is Perfection it felf, and that beyond it is no progrefs.

All our Work then is only to multiply this Fire, that is, to circulate the Body, to long until the Virtue of the Sulphur be augmented. Again, this Fire is an invisible Spirit, and therefore not having Dimensions as neither above nor, below, but every where in the Sphere of the activity of our Matter in the Veffel; So that though the material visible fubstance do fublime and afcend by the action of the Elemental heat, yet this Spiritual Virtue is always as well in that which fublides in the bottom, as in that which is in the upper part of the Veffel. For it is as the Soul in the Body of Man, which is every where at the fame time, and yet bounded or terminated in none. This

This is the Ground of one Sophilm of ours, (viz.) when we fay, that in this true Philosophical Fire there is no Sublimation; for the Fire is the Life, and the Life is a Soul, which is not at all subject to the dimensions of Bodies : Hence alfo it is, that the opening of the Glafs, or cooling of the fame during the time of Working, kills the Life or Fire that is in this fecret Sulphur, and yet not one Grain of the matter is loft. The Elemental Fire then is that which any Child knows how to kindle and govern, but it is the Philosopher only that is able to discern the true inward Fire, for it is a wonderful thing which acts in the Body, yet is no part of the Body. Therefore the Fire is a Cœlestial Virtue, it is uniformed; that is, it is always the fame until the period of its Operation is come; and then being come to perfection, it acts no more, for every Agent, when the end of its action is come, then refts.

19

ha

ar P

2

Remember then, that when we speak of our Fire which sublimes not, that thou do not mistake, and think that the moisture of the Compound which is within the

the Glass, ought not to Sublime, for that it must do unceffantly; but the Fire that fublimes not is the Metalline love, which is above, and below, and in all places alike. Now then for a close to all that hath been faid, learn, and be well advifed what matter you take in hand, for an evil Crow lays an evil Egg, as the Proverb hath it; Let thy Seed be pure, and thy Matrix also pure, then shalt thou fee a Noble Off-spring : Let the Fire without be fuch, as in which our Confections may play to and fro unceffantly, and this (in a few days) will produce that which thou most longest for, the Crows Bill. Continue then thy Decoction, and in an hundred and thirty days thou shalt see the White Dove, and in ninety days more the Sparkling Cherubim.

For the more exact Guiding of your Pratice, take notice of these Tnenty Rules Rule I. following.

Whatever any Sophifter may fuggeft unto you, or you may read in any Sophistical Author; yet let none take you from this ground, (viz.) That as the end you look for is Gold : fo let Gold be the fubject on which you work, and none others not servery a fig not carbined Rule II. Statut to any

Let none deceive you with telling you, that our Gold-is not common, but Philosophical; for common Gold is dead, which is true : But as we order it, there is made a quickening of it, as a grain of Corn in the Earth is quickened. L'alo I. So

32

So then in our work, after fix Weeks, Gold that was dead, becomes quick, living, and fpermatical; and in our compolition, it may be called Our Gold, becaufe it is joyn'd with an Agent that will certainly quicken it : So a Condemned Man, is called a Dead Man, though at prefent living.

Rule III.

Belides Gold, which is the Body or Male, you must have another Sperm, which is the Spirit and Soul; or Female, and this is *Mercury*, in Flux and Form like to common *Argent Vive*, yet more clean and pure.

There are many, who inftead of Mercury, will have ftrange Waters or Liquors, which they ftile by the name of Philofophical Mercury; Be not deceived by them, for what a Man fows, that he mult look to reap: If thou fhalt fow thy Body in any Earth, but that which is Metalline and Homogeneal to it; thou fhalt inftead of a Metalline Elixir, reap an unprofitable Calx, which will be of no value.

IV.

Our Mercury is in fubftance one with common Argent Vive, but far different in Form; For it hath a Form Cœleftial, Fiery, and of excellent Virtue : and this is the Nature which it receives by our Artificial Preparation.

altow of Rule V. stat and data

The whole Secret of our Preparation, is, that thou take that Mineral which is next of kin to Gold, and to Mercury; Impregnate this with Volatile Gold, which is found in the reins of Mars, with this purifie your Mercury until feaven times are past; then it is fitted for the Kings Bath.

Rule VI.

Yet know, that from feaven times to ten, the Mercury is made better and better, and is more active, being by each Preparation acuated by our true Sulphur; which if it exceed in number of Preparations, becomes too fiery; which inftead of diffolving the Body, will Coagulate it felf. D 2 Rule VII.

Rule VII.

tun

pur

of

We

ci

W

15

EV

0

21

This Mercury thus acuated, is after to be diffilled in a Glass retort twice or thrice; and that for this reason, because some Atoms of the Body may be in it, which were insensibly left in the Preparation of the Mercury, afterwards it is to be cleansed well with Vinegar and Sal-armoniack, then is it fit for the work.

Rule VIII. 2 200

Chufe your Gold for this work pure and clean from any mixture: if it be not fo when you buy it, make it fo by Purgation; then let it be made fine, either by Filing, Malleating, Calcining with Corrofives, or any other way, by which it may be made most fubtile.

Rule IX.

Now come to your mixture, in which take of the aforefaid Body fo chofen and prepared, one Ounce of Mercury, as is above taught animated, two Ounces or three at the moft, mix them in a Marble which may be warmed fo hot as water will heat it; grind both together till they be well incorporated, then wash the mixture

Sir G. Ripley's Epistle. 35

ture with Vinegar and Salt till it be very pure; And laftly, Dulcifie it with warm water, and dry it carefully.

Rule X.

Know now, that whatever we fay out of Envy, our way is none other, and we proteft, and will proteft, that neither We, nor any of the Antients knew any other way; for it is impossible that our fecret can be wrought by any other Principles, or any other disposition then this. Our Sophifm lies only in the two kinds of Fire in our work : the Internal fecret Fire, which is Gods Instrument, hath no qualities perceptible to man, of that Fire we speak often, and seem yet to speak of the External heat; and hence arife among the unwary many Errours. This is our Fire which is graduated, for the External heat, is almost linear all the work, to the white work, it is one without alteration, fave that in the feaven first days we keep the heat a little flack for certainty and fecurity fake, which an experienced Philosopher need not do. But the Internal governing heat is in-

D 2

fenfibly

26

fenfibly graduated hourly, and by how much that is daily vigorated by the continuance of Decoction, the Colours are altered, and the Compound maturated: I have unfolded a main knot unto you, take heed of being infnared here again.

Rule XI.

Then you must provide a Glass Tun, in which you may perfect your work, without which you could never do any thing; Let it be either Oval or Spherical, fo big in reference to your Compound, that it may hold about twelve times the quantity of it within its Sphere, let your Glass be thick and ftrong, clear, and free of flaws, with a neck about a Span or Foot long; In this Egg put your matter, fealing the neck carefully, without flaw, or crack, or hole, for the leaft vent will let out the fubtile Spirit, and deftroy the work.

You may know the exact Sealing of your Glass thus, when it is cold, put the neck where it is fealed, into your mouth, and fuck ftrongly; if there be the least vent, you will draw out the Air, that is

in the Vial, into your mouth, which when you take the Glass from your mouth, is again suckt into the Glass with a hiffing, so that your ear may perceive the noise; this is an undoubted tryal.

Rule XII.

You must then provide your felf with a Furnace, by wife men called an Athanor, in which you may accomplish your work; nor will any one ferve in your first work; But such a one in which you may give a heat obscurely red at your pleasure, or leffer, and that in its highest degree of heat, it may endure twelve hours at the least.

This if you would obtain; Obferve, First, that your nest be no bigger then to contain your dish with about an Inch vacancy at the side where the Vent-hole of your *Athanor*, is for the Fire to play.

Secondly, Let your Difh be no bigger then to hold one Glass with about an inch thickness of Alhes between the Glass and fide, remembring the word of the Philosopher, One Glass, One Thing, One Furnace; for fuch a Difh ftanding with

D4

the

28

the bottom level to the vent-hole, which in fuch a Furnace ought to be but one, about three Inches Diameter, floping upwards, will with the ftream of Flame, which is always playing to the top of the Vefiel, and round about the bottom, be kept always in a glowing heat.

Thirdly, If your Difh be bigger, your Furnace vent must be within a third part, or a fourth as big as your Platter is Diämeter, else it cannot be exactly, nor continually heated.

Fourthly, If your Tower be above fix Inches fquare at the Fire-place, you are out of proportion, and can never do rightly as to the point of heat; For if you caufe it (if above that proportion) to ftream with flame, the heat will be too big : And if it ftream not, it will not be big enough, or very hardly.

Fifthly, Let the top of your Furnace be clofed to an hole which may but juft ferve for caffing in of Coals about three Inches Diameter or Square, which will keep down the heat powerfully.

[][.

These things thus ordered, set in your Glass with your matter, and give Fire as. Nature requires, easie, not too violent; beginning there where Nature left. Now know, that Nature hath left your Materials in the Mineral Kingdom; therefore though we take comparison from Vegetables and Animals; Yet you must understand a Parallel in the Kingdom, in which the Subject you would handle is placed: As for Instance, if I should Analogize, between the Generation of a Man, and the Vegetation of a Vegetable, you must not understand, as though the heat for one, were to be measured by the other; for we know, that in the ground Vegetables will grow, which is not without heat, which they in the Earth feel, even in the beginning of the Spring; yet would not an Egg be hatched in that heat, nor could a man feel any warmth, but rather to him a numbing cold.

Since then you know that your work appertains all to the Mineral Kingdom; you must know what heat is fit for Mineral Bodies, and may be called a gentle heat,

40

heat, and what violent; First, now confider, where Nature leaves you, not only in the Mineral Kingdom, but in it to work on Gold and Mercury, which are both incombustible : Yet Mercury being tender, will break all Veffels, if the Fire be over extreme; Therefore though it be incombustible, and to no Fire can hurt it, yet also it must be kept with the Male Sperm in one Glass, which if the Fire be too big, cannot be, and by confequence the work cannot be accomplished. So then from the degree of heat that will keep Lead or Tin constantly molten, and higher, fo high as the Glass will endure without danger of breaking, is a temperate heat; and fo you begin your degrees of heat according to the Kingdom in which Nature hath left you.

As then the higheft degree of heat which the root of a Tree feels in the bowels of the Earth; is not by far comparable to the loweft degree of heat an Animal hath; So the higheft degree of heat a Vegetable will endure without burning, is too low for the first degree of Mineral heat as to our Work.

Know, that all your progress in this Work is to ascend in *Bus & Nubi*, from the Moon up to the Sun; that is in *Nubibus*, or in *Clouds*: Therefore I charge thee to fublime in a continual vapour, that the Stone may take Air, and live.

Rule XV.

Nor is this enough, but for to attain our permanent Tincture, the water of our Lake must be boyled with the Assess of Hermes Tree; I charge thee then to boyl night and day without ceasing, that in the troubles of the stormy Sea, the Heavenly Nature may assend, and the Earthly descend.

For verily, if we did not Boyl, we would never name our work Decoction, but Digeftion; For where the Spirits only Circulate filently, and the Compound below moves not by an Ebullition, that is only properly to be named Digeftion.

Rule XVI.

Rule XVI.

gin

IS,

de

te

he

W

W

Be not over hafty, expecting Harvest too soon, or the end soon after the beginning : For if thou be patiently supported, in the space of fifty days at the farthest, thou shalt see the Crows Bill.

Many (faith the Philosophers) do imagine out Solution to be an easie work; But how hard it is, they can only tell, who have tryed and made Experience: Seeft thou not a Grain of Corn, fow it, and after three days thou shalt only see it fwell'd; which being dry'd, is the Corn it was before : Yet thou canst not fay it was not cass into its due Matri x; for the Earth is its true place, but only it wanted its due time to Vegetate.

But things of an harder Kernel lie in the ground a far longer time, as Nuts and Plumb-ftones, for each thing hath its feafon; And this is a true fign of a natural Operation, that it ftays its feafon, and is not Precipitate : Doft think then, that Gold the most folid Body in the world? will change its Form in a fhort time; Nay, thou must wait and wait until Sir G. Ripley's Epifile. 43 til about the 40th day utter blacknefs begins to appear; when thou feeft that, then conclude thy Body is deftroy'd, that is, made a living Soul, and thy Spirit is dead, that is Coagulated with the Body; But till this fign of Blacknefs, both the Gold and the Mercury retain their Forms and Natures.

tain of all Goodness; I shall take up his Pattern for a Precedent rather of Imitation, than a Subject of Exposition.

And first, as touching those who thall bend themselves to this Science ; Let them refolve that they undertake a most admirable piece of Work, in which (though far be it that I should think that God bestows upon any of us what we enjoy for our own Merits, but of his free Grace, yet withal) let me exhort any one who shall set his Studies this way, to addrefs himfelf to the Author and Fountain of Goodness for his help, that he may have grace to honour God in the use of fo great a Talent : For I perfwade my felf, that whomever God shall appoint to be Heir of fuch a Talent, that he will give him a heart to improve it aright; or elfe he will add to his Judgment for the abuse of so great a Bleffing.

For whoever fhall be wanton and diffolute, and live without the fear of God, what may he not do with fuch an Art? unlets God reftrain him, as certainly he will, hiding this Secret from him, or making it to him a fnare and trap to betray his Life into

the Preface of Sir G. Ripley. 3 into the hands of covetous men of the World, as many have found it by fad experience. Therefore the Lord give both me and thee that grace, that he may be continually before our Eyes, The Alpha and Omega of our Thoughts, Words and Actions: Even fo Amen.

Above all which and in all which God is, he is the Maker and the Lord of all, above all, bleffed for ever, who hath purchafed to himfelf a People, and redeemed them, and they fhall reign with him for ever and ever.

For as of one Maß was made all things, right so in our practice must it be.

A Pply all this to the work of this Maftery Analogically and Allegorically: for as the Lord made all the works which we fee, fo he did lay them all under his powerful word of Command, by which they continue to be what they are, and are carried with an uniform motion to that first Pattern or Draught of things.

the Preface of Sir G. Ripley. 5

All our Secrets of one Image must Spring.

it of

111

A^S then out of one mixed confueed Mass all things had an actual existence according to their feveral kinds, fo out of one Image all these Secrets mult flow: Truth doth not confiss in Heterogeneity, but in Unity; for God is one, and his works uniform; and the more Noble any thing is, the nearer to Simplicity.

As in Philosophers Books, whose list to see.

TO this the Sentences of the Philofophers concur, as many as have truly underftood the Secret, as Morien often and plentifully witneffeth, Geber, Trevisan, and many others: The thing is but one in kind, though two in number; and though more things are used, yet till they be all brought to an oneness of Nature, they are not fit to enter into this work.

A 4 the Red to Our

6

Our Stone is called the Leffer World.

わいう

A Nd therefore our Stone is refembled to Man, who although he have a Wife different from him in Sex, yet one with him in kind; in which fence it is called the Microcofm, or Lefs World: for indeed, next to Man, who is the Image of God, it is the true little System of the Great World: I shall not particularize here how, for in its place it will fall in feafonably.

One and Three.

This Stone is alfo called Trine or Trinity in Unity, from the Homogeneity of the Matter, as Trevisan faith: Our Stone is made of one Root, that is, of two Mercurial Substances, &c. This Trinity is different in the Components; for first there is the Body, which is Sol, and the Water of Mercury, in which befides its Mercuriality, there is a spiritual feed of Sulphur, which is the fecret Fire. This is the Trinity, these are called the Body,

the Preface of Sir G. Ripley.

Fire.

the

Body, the Soul, and the Spirit; the Body is the dead Earth, which increaseth not without the celeftial Vertue; the Spirit is the Soul of our Air or Chameleon, which is also of a two-fold composure, yet made one inseparably; the Soul is the Bond of Mercury, without which our Fire never appears, nor can appear, for it is naked, it inhabits the Fiery-Dragon, and it yields his Soul to the true Saturnia, and is embraced by it, and both become one together, bearing the ftamp of the most High, even the Oriental Lucifer, the Son of the Morning : This Soul is Chalyb's Magical Volatile, and very tender, the true Minera of Sol, out of which Sol naturally proceeds, which I my felf know to be true, and have spoken of it in my little Latin Treatife, called Introitus apertus ad occlusum Regis palatium : This is true Sulphur, which is imbibed by the Mercuriality of Saturnia, and notes it with the Regal Signet, and being united and revived into a Mineral Water by the Mediation of Diana's Doves, it is the fharp Spirit which in the Water moves the Body to putrefie. Thus is the Trinity propor-

."#"

8

proportionable, to wit, three Natures in the first Mixture, the Work is carried an end to perfect Complement diffinctly, according to the Vertue of a Body, Soul, and Spirit : for the Body would be never penetrative, were it not for the Spirit, nor would the Spirit be permanent in its fuper-perfect Tincture, were it not for the Body; nor could these two act one upon another without the Soul, for the Spirit is an invisible thing, nor doth it ever appear without another Garment, which Garment is the Soul. In this it exerciseth its vertue : this Soul, as it is drawn from the Saturnia, folid and dry, is named our Air, or rather the Chameleon, which is an airy Body, changing its hue according to every Object it beholds, fo our Air is of an altonishing Nature, out of which I know all Metals may be drawn, yea even Sol and Luna, without the Transmuting Elixir, of which in my little Latine Treatile (which was the Congest of mine own experience) I spake fully.

This Air being diffolved into Water Mineral, hath in it two of our *Trinity* united to really that in a fhort digestion the the Preface of Sir G. Ripley. 9 the fpiritual inhabiting invisible Sulphur will without addition congeal the Mercury in which it is, and make a visible congelated substance of Luna and then Sol.

Thus this Trinity is indeed Unity, one being Gold mature, fixt, and digefted in act, the other Gold volatile, white, and crude, yet (in posse) to be made most fixt and folid by naked digestion. It is not then a delusion that Philosophers speak and write, for trust me (Viderunt nudam fine veste Dianam; sciens loquor) I know I speak true, which the Sons of Art do know, and can testifie with me.

Magnesia also.

This Stone is by the Philosophers called their Magnesia, their Adrop, &c. with many more names, and is indeed their Stone in the first true mixture of the true matter; for it is the true seed, and will produce, with the co-operation of external Fire, in a patient expectation of the time of Nature, which is not long to him that understands it.

10

Of Sulphur and Mercury.

ma Tr

tri

th

P

FOr that which is done by Nature in many years and ages, in the bowels of the Earth, decoding Mercury alone, without addition; Art, tomake the work fhort, first impregnates Mercury with a spiritual feed of Sulphur, by which it becomes powerful in the diffolution of Metals, and then adds to it mature Sulphar, by which the work is shortened; and out of these two Parents of one Root is brought forth a Noble Son of a Regal Off-spring, that is not simply Gold, but our Elixir, ten thousand times more precious.

Proportionate by Nature most perfectly.

Y Et all this Work of the Artift is only to help Nature ; we can do no more, yea we have profefied and will profes, that we do only administer unto Nature herein ; for all the Works of God are intire, we can but behold them and admire them ; and therefore we seek our Prin-

the Preface of Sir G. Ripley. 11

Principals where Nature is, and amend Nature in its own Nature. Nor do we make the fimple believe, which is the Trade of Sophifters, that we by our Extractions and Manual Operations upon Vegetables, Minerals, Urines, Hair, or the like, intend to make our fo highly prized Elixir; but out of fuch things in which Nature hath put it, we by Art do make it appear by revealing what was hidden, and hiding what was manifeft.

But many one marvelleth, and marvel may, and museth on such a marvellows thing.

W Hereas those who work upon other matters than the true, do betray their ignorance herein most foully, that they do not confider the possibility of Nature, but work after their Fancy; as though out of combustible fubstances filthy in their nature, and made up of Heterogeneities, might be produc'd a pure perfect Metallick Substance, by reafon of its unseverable Unity invincible, and by vertue of its transcendent Excellency cleansing and fixing all leporous and fugi-

+2

fugitive bodies in the Mineral Kingdom, and reducing them to the Anatical proportion of perfectly digefted Sol or Luna, according to the quality of the Medicine. When therefore their Principles are not found, their Conclusion is always deceitful, and then they not knowing Nature in her Operation, but interpreting the words of the crafty and envious Philosophers, according to the Letter, do stand admiring at the Unconformity of their Work to the Promifes of the Philosophers, at least as they understand their Books; they admire what this Stone is, if it be a Truth, or a Conceit; and why they (as well as any) do not attain it if poffible : Such meditations ufually fill the minds of unfuccessful Alchymists, who though they be (as they effecm themfelves) very Judicious, yet cannot ftumble upon this unhappy Stone.

To this I answer, That Mercury it is I wis.

TEt trust me, though the wife men thus write, and it be true, there is notwithstanding something to be added to their Sentence, according as the Author of Novum Lumen well observed, as namely, That this Art is easie to him that understands it, as Artephius plainly expreffeth; but to him that is ignorant of it, there is nothing can appear to hard ; The Wife Man, faith Sendivogius, finds it in a Dunghil, but the Fool cannot believe that it is in Gold. I for my part (through the great mercy of God to me an unworthy and unthankful Creature) I know the Art to be true, and not that only, but alfo very eafie; and I wonder that men of so great parts have studied for it so long in vain; only this I am confident of, it is the gift of God; nor is it in him that willeth, nor in him that ranneth, but in God that give th mercy : In which respect I am bold, to the glory of God, to confess that I have the Art, and have Natures Operations in these so hidden Secrets, before mine the Preface of Sir G. Ripley. 15 mine eyes at this prefent writing, which I fee hourly with admiration of the infinite Glory, in the beholding of fuch a great Glory in the Creatures, which, truft me, will ravifh the Beholder, to fee fuch a defpifed Infant as our Mercury is, to grow into fo ftrong a Herce, which the World cannot purchase.

But not the Common, called Quick-filver. by name.

TEt the difficulty is not over when once it is known that the whole Secret confifteth in Mercury; for what more frequent among the Sophifters than to cry, Our Mercury, &.c. and yet in the Work of Nature they are as blind as Moles? The cause is, for that Nature hath produced a Mineral Juice in the bowels of the Earth, which doth answer. to molt of the Philosophical Descriptions. of their Water ; as namely, that it is mineral, quick, current, without humectation, ponderous, and the like; which when the vulgar Alchymists read, they apply it to this naughty Mercury, which for inward

ward Qualities hath nothing in it like ours.

An

110

H

n Some there are, who trufting to the Sentence of most of the Wife Men who have written concerning this Art, do rejeft Mercury vulgar in word, when as indeed they dote as much upon it as others, whenas by their mock-purgations they handle Mercuries divers ways by Sublimation, Precipitation, Calcination Manual, even to a black substance, like to Soot or Lamp-black, by distillation from fundry Faces, after grinding with Vinegar, by Calcination with Waters-fort, by Lotions innumerable, changing Mercury into fundry forms, and after quickming him: By all which Operations they imagine themfelves fecure of the Secret of our Mercury, whenas all fuch ways indeed are but Sophilms; and yet Mercury fo abused is one and the same vulgar Mercury.

So that upon this Rock more have fumbled than upon any other, & yet will fumble, till they know how to diftinguish our *Mercury* from Common, and our preparations from that of the vulgar Sophifters

Being to thee nothing deceiveable.

A S then I have chosen *Ripley*'s Method; to follow, so will I imitate his Ingenuity, and do solemnly profess not to be deceiveable to thee in any thing, though I shall not so unfold the Mysteries, that bare reading shall suffice to shew the unveiled Diana.

Know therefore affuredly, that when the Philosophers fay, That their Matter is every where, &c. This they speak only for the blinding of all such who taking the Philosophers meaning according to the bare sound of their words, do reap Trifles instead of Treasures. I shall therefore let you understand that this subject of the Philosophers is considered either in reference to its Matter, or formal Vertue; in reference to the former, it is a concrete of Water, as all other Compounds are; in respect of the latter, it participates

the Preface of Sir G. Ripley. 27 ticipates of a Celeftial Virtue, and that in a high degree in both respects. It is faid to be in every place : for the origi. nal matter, which is Water, passeth equally through the whole Family of Concretes: and for the celeftial Influence, it is fo univerfal that nothing is hidden from the heat of it : so that indeed in this fence it is faid to be every where. Moreover, the Stone being the System of the great World, doth in some way or other represent every thing which is or can be perceived by man; I mean in reference to some or other operation, colour or quality, and therefore the Wife have described it almost by all things imaginable, for to every thing in some or other circumstance it hath refemblance.

Take heed therefore what I to thee write.

A Nd now I call God to witnels that I will thew you a great Mystery: our Stone is in one part of a perfect nature, which we would exalt into a more then most perfect, and for this end we stand in need of our true Fountain, which I have elsewhere described, and shall not now repeat: This Fountain hath three Springs, and these are three Witnesses which testifie to the Artist of the truth of his proceedings; these are the Spirit, the Water, and the Blood, and these three agree in one; the Water is a Mercurial Bond, which the Sophisters can behold fo far as the

the Preface of Sir G. Ripley: 29 the outward shell reacheth, but the wife man can behold his hidden fecret Contre: the Blood is of our Green Lyon, which is indeed the greeneft or raweft of the three : for it hath no manner of Metalline Sulphur, no not a grain, and therefore is Totally Volatile, and it is more raw than the common Water. and yet it is called the Blood, for a most fecret reason, because it is the seat of the Life, which is the Spirit, as Blood in man is the feat of his Life ; yea the Spirit by this Soul of our Green Lyon, is made manifest, and is united to it, fo that though it be very green or unripe, yet that inhabits it, which is both pure and ripe, and can and will digeft it with the Water, and make both become life with life : Now the Spirit is nothing elfe but a Chaos, the Wonder of the Wonders of God, which every man almost hath, and knows it not, because as it appears to the World it is compact in a vile despised form ; yet is it fo useful, that in humane Affairs none can want it : to the Philosopher it appears united to the Blood, that is, of our Green Lyon, which truly is not a Lyon till the **fpirit**

30 An Exposition upon fpirit be joyned with it, and then it is made able to devour all Creatures of its kind.

And these three agree in one, they are not absolutely one, mark that; our Fire is not of the matter, and yet it is united with the matter, as if it were of one form with it; and there is an agreement in one, though not a radical union; for the spirit (which is the Fire) is separable from the Water and the Blood; and then is our Lyon actually Green, but ceaseth then to be our Lyon, but is the true matter to multiply Emeraulds more glorious than natural.

For if to thee. Knowledge never come, Therefore yet shalt thou me not twite.

A Nd now indeed if any be ignorant, let him be ignorant; I know not what more to fay, and not transgress the filence of *Pythagoras* I have told you that our matter is two-fold, crude and fixed; the fixed is by Nature perfected to our hands, and we need only to have it made more then

the Preface of Sir G. Ripley. 31 then most perfect, which Nature alone could never perform; nor is there any. thing that can thus exalt Tinctures, but our diffolving Water, which I told you floweth from three Springs 5 the one is a common Well at which al! draw, and of which Water many use; this Well hath in it a Saturnine droffines, which make the Waters unuleful; these frigid superfluities are purged by two other Springs, through which the Water of this Well is artificially cauled to run : these Springs make but one Well, whole Waters appear dry, the humidity being fealed; the Well; it felf is surrounded with an Arsenical Wall, the flimy bottom abounds with the First Ens of Mineral Salt and Sulphur ; which acuate the Water of the first Well, whofe primary quality is Coldness; being thus acuated, it becomes fo powerful: a Menstruum, and so pleasant to the Metals, that for its peculiar Vertue it is chofen for to be the Bath of the Sun and Moon.

As Washington and the Breat of the other of For

For I will truely now thee excite to understand well Mercuries three.

is a start to the

B Ut because one Book never is sufficient in this Mastery, to discover all that is to be known, and other Authors write variously of *Mercury*: Attend further what I have to say to the concerning this point. Owned because

We have in our work properly three Mercuries, of which one is to be by the Philotopher prepared, of which I have fpoken; and this being joynd with the perfect Body, and fet to digeft, the Glass is flut, and then in this first Composition is the Matter called *Relis*, that is, (two things) to wit in Number, for you may yet leparate each from other in its intire nature.

These two being joyned, do operate fo within the Vessel till the Compound become a black Powder, which is then called the Ashes of the Platter.

This Powder relenteth into a black Broth, which is called *Elixir*, or Water extracted by Elixation, which is reiterate Liquefaction. This

the Preface of Sir G. Ripley. 33

This Elixir is divided into a more fubtile part, which is called *Azoth*, and the groffer part is called *Leton*, which is by *Azoth* washed and whitened.

This

In Rebis the Matters are confused, in Elixir they are divided, and in Azoth they are conjoyned with an inseparable union.

The Keys which of this Science be.

These Menstruums or Mercuries are the very Keys of this Science: The first is the Philosophers Key, the other two are Natures Keys;

Reymund his Menstrues doth them call.

They are called by the wife men Menfrues, in three refpects : first for the tecrefie of them; as those Lunary Tributes of Women are hid from common view, so these Mercuries from vulgar Searchers. Secondly for the Prognosticks of them; as those in Women betoken maturity to conceive, so these are called Menstrues because they are fit for C 2 pro-

procreation. Thirdly in regard of the office of them; as those in Women are accounted nutritive for the Embrion, fo our Child is nourished by these to perfect age and strength.

Let me add a fourth reason, and that is, in respect of the time; the Philosophical Preparation will hardly give thee thy first Menstruum fit for thy use in less than a month. And after conjunction thy first Menstruum will begin to hold of the nature of the Body in another month, and then thou shalt see a flow of the fer cond Menstruum ; but wait till another month, and thou shalt fee thy fecond. Menstruum compleat; then yet wait a third month, and thou shalt see a show of the third Menstrumm, which in the fourth month will perfectly exuberate, and then with it thou shalt soon see perfected Sulphur of Nature, for it is Fire of Nature ; and in this first Exaltation is the white Stone perfected.

and Course would be to be appropriately be

bout

He then that knoweth not the Secret of our *Menstruals*, let him forbear the practice of the Work, for verily he may expect nothing but a fophiftical Delufion inftead of the true Work of Nature : He is like a man that would enter an inacceffable Caftle without a Key, or fhoot in a Bow without a ftring.

But two of them be superficial.

Now that you may know our Secrets exactly, we fhall faithfully difcover unto you our Experience, as cordially as a Brother may declare to a Brother; and fhall reveal what I never found yet revealed in any Author.

There are in our *Mercury* three Mercurial Substances, which may well be called *Menstrues*, the one the more groß part, (which though it be a Water, yet it being the most palpable part, and visible, may be termed the Body of the Water: the last is a Fiery Form, which is the C 3 Blood

26

Blood of Cadmus; this is a real invifible form, which is effentially and formally Sol Volatile: the fecond is the mean Soul, which Philosophers without Equivocation call Saturn's Child; the middle substance of these three, are made into one wonderful Mercury, which hath not its like in the world.

Now for the superficiality of the two first Menstrues or Mercuries, and the effentiality of the third, know and underftand, for our speech will be very mysterious : Know I fay, what it is to be superficial, and what effential : Effence you know is invifible, and more formal then material, which doth actuate the matter, and ripens it ; but that which is fuperficial is visible, and may be seen, and is more material and paffive : Now those two first which are superficial, are the Water and the Blood, the effential Menftrue is the Spirit, which all are in one ; yet distinguished in number, though not in kind.

Tbe

The third Effential to Sun and Moon.

t-

1-

Id

fe

he

en.

ej

lot

SO then two are material pative fubftances, which are united in our fophical Mercury; the third is an active effence which is hid in our Mercury, which is effential to Sun and Moon, becaufe it is a Fire, which is Sol volatile; and as the Artift may govern this Mercury, it will digeft the paffive Principles either into Sol or Luna, at the Philosophers pleasure.

Their Properties I will declare right foon.

I Shall by and by in its place defcribe to you all the Properties of these three Menstrues, when I come to it; in the mean time take notice that by this Mercury in which are three Mercuries, or Menstrues, the perfect Bodies will be calcined, and then diffolved into Mercury, which is not then so properly called a Menstrue, for it is the Fruit it self, called Azoth, or Virgins Milk; which is a digestion beyond the Menstrues.

C 4

And

And Mercury of Metals effential, Is the Principle of our Stone material. -1 1 1 - 1 1 1 1 1 Chiphens desi teefa

He Bodies when they are diffolved do transmute the foresaid Mercuries by their own ferment, into their own nature, for the Fire of Nature affimilates all that nourisheth it to its own likenes; and then our Mercury or Menstrue vanisheth, that is, it is swallowed up in the Solary Nature, and all together make but one universal Mercury, by intimate union, and this Mercury is the material Principle of the Stone; for before our Mercury (as it was compounded of three Mercuries) had in it two which were superficial, and the third effential to Sol and Luna only, not to the Stone: for Nature would produce these two out of it, by artificial decoction: but when the perfect Bodies are diffolved, they transmute the Mercury (that diffolved it) and then there is no more repugnancy in it, then is there no longer a diffinction between superficial and effential, but all is become effential : And this is that one matter of the Stone, Level

that

the Preface of Sir G. Ripley. 39 hat one thing which is the fubject of all Wonders

In Sol and Luna our Menstrues are not feen.

1

S

•

n.,

le

Υ.

e-

ury.

10

le,

When thou art come to this, then thalt thou no more differen a diffinction between the Diffolver and the Diffolved; for the Water thall neither afcend nor defcend, go out nor in alone; but the Fire of Nature thall accompany it, and the colour of the mature Sulphur, which is unfeparably joyned, thall tincture thy Water.

It appeareth not but by effect to fight.

S^O that thou fhalt never fee them fevered one from the other, but fhalt difcern them by the effect, and by the eye of thy mind more then of thy body Therefore faith the Philosopher, Azoth and Fire are sufficient for thee in the middle and end, but not in the beginning, for then they are not our Mercury, that is our universally united Mercury. But in the

the first days of the Stone, there appear four Elements, of which three are in the Mercury fublimed, and one in Sol, which is counted all for Earth till it be diffolved, and then it fermenteth the Mercury. and makes the three qualities of it, which it hath, drawn from three substances to unite into one Mercuny which hath all in it one effential property, and that is Solary, which first will shew the Moon in the full, and is the true one matter of all our Secrets, our one Image out of which fprings white and red, not bare Sol and Luna, as will spring out of our Mercury, which we prepare with our hands, but the white and red Elixirs, which shew that this Mercury which Nature hath made in the Glass, without our help, is far beyond that Mercury which we prepared with a laborious toil.

This is the Stone of which we mean, Who fo our Writings conceiveth aright.

LOUISIL LUCA

A Nd verily he that hath well fudied our Books shall understand that this general one Mercury which we call Azoth, is indeed our Stone, which wanteth only digestion, for it is inseparably united, not in a Dyptative Conjunction, which is barely a mixture of the Sun with our Mercury; or Triptative, which is a mixture and union of the Body, Soul, and Spirit, which is before Putrefaction; but Tetraptive, which is the Anatization of qualities, which is the first degree of the white Stone, which will then grow higher and higher, till the Moon come up to the full.

It is a Soul and Substance bright.

LUCE TRAIL

7

T His Stone or Virtue multiplicative is not in relation to the matter, but the form, which doth make the matter to receive and after impress Tinctures : for who could believe that Sol, in which the vir.

virtue is but unary, I mean only fufficient for it felf, thould by the addition of our *Mercury*, which in reference to its material parts, is below the degree of *Sol*, and needs digeftion, and that only to maturate it to the height of *Sol*, I fay that by the mixture of those two Venerial Tinctures, thould be multiplied in a manner infinitely.

Of Sol and Luna a subtile Influence.

1 mail and and the second

W Ere it not that this Tincture which in the Mercury is Sol and Luna, were as a Soul, that is, a fpiritual thing, it were impossible; it is therefore the very Dos facunditatis which is in Minerals (which doth appear in their Lunary and Solary Tinctures) which was put and planted on and in them, in the first Benediction of (Crefcite & Multiplicamini) which increasing is in some things juxta quantitatem : This is in quality.

Whereby

Whereby the Earth receiveth resplendences

by

the second second second CO then the matter of Minerals is a I dead paffive thing, in which there is included a Light which is cloathed (vitali Aura etheria) as I may speak; this form of Light is it which doth actuate and specificate or determine the matter ; and this splendor or Light is in all Metals, Sol or Luna, which are conspicuous more eminently in those two perfect Bodies Gold and Silver, but are in other Mineral Bodies more Clouded and Eclipfed with an earthly fæculent interpolition between the fulgor and the fuperfluities, which is the Imperfection of fuch Bodies; and is accompanied with a rawnels and inconstancy in the Fire, the Impure carrying away the Pure.

and the second s

For

44

For what is Sol and Luna, faith Avicen, But Earth which is pure White & Red?

SO then Sol and Luna is more formal then material; for the matter is a groß Terrene Substance, but the form of Light purifying the Substance, is a most fubtile spiritual thing which doth ennoble the großness of the matter by a Fire-abiding Tincture.

Take from it the faid Clearness, and then That Earth will stand but in little stead.

B Ut if this Tincture could be feparated from the pondus of the matter, the remainder would be an unprofitable Terrefiriety: Our work therefore is for to advance this Light by exaltation in the matter; which as it in its fimplicity is but in unity, fo it may be brought to a Virtue millenary, and gradually fo exalted, that the matter would feem to be quite fwallowed up of the form; and yet in this exaltation it is not the moles or pondus that is the Solary or Lunary Virtue, but the Preface of Sir G. Ripley: 45 but a Light whole multiplication is not in the increase of *pondus*, but in the circulation of Natures, till the Heavenly illuminate the Earthly with an immediate Beam, all interposition being removed out of the way.

The whole Compound is called our Lead.

1

ħ

ł

e

a

R

ŀ

29

F Or to attain this admirable multiplication Philosophers have found out a most subtile yet very natural Composition, which hath been not a little sought for by many : this the wise Antients, both to describe the Fountain of these Mysteries, as also to hide the Secret from the unworthy, have mystically called their Lead.

The quality of Clearneß from Sol and Luna doth come.

T His Lead, so called from the appearing baseness of its original, is notwithstanding of an admirable power, for it contains the Bath for Sol and Luna; that is, the San and Meon enter into it, and fend

fend out their Tinctures into it, which it receiveth, and like to a fertile Soil ennobleth it an hundred and an hundred fold.

These are our Menstrues, both all and some.

Thus have I in general given you a defcription of our Menstrues, which are three, Acetum, Elixir, and Azoth; which I shall now particularly describe.

Bodies with the first we Calcine naturally; perfect.

T fo

äni

À

8.2V

T He first Menstrue we call our sharp Vinegar, with infinite other names, which it will be tedious for to recite; and with this is made our Magical Solution of Sol; this, saith Sendivogius, is (Menstruum mundi in Sphara Luna toties restificatum at possit calcinare Solem.) In this, saith the noble Author of the Hermetical Arcanum, is made Eclipsis Solis & Luna in Cauda Draconis : this is, as Artephins saith, the only Instrument in the World for our Art: for it causeth the Sun to putrefie; that is, it loseth its hard compabud

ction, and makes it to be an impalpable Powder, as faith the truth-telling *Flammel.* In this Calcination, as all Authors teftifie, and our own Experience hath taught us, Natures are united, Colours are mingled, and one holds of the other, and this is the period of the first Men*ftruum*, which ends in this Circulation.

But none which been unclean.

This Blackness many erroneously conceive to be uncleanness, but it is not fo, for it is only the Sepulcher of our King; in which, though he seem to have lost what he was, yet from hence he shall arise what he never was before.

011,

Except one.

A Nd verily there is nothing of an unclean nature that entreth our Compolition except one thing, which is the Inftrument moving the *Gold* to putrifie; and in regard that it doth naturally incline the Body to putrifie, and is as it were the very grave of it, it is called by fome Philofo-D phers

48

phers Aqua fætida, and by fome Mortis Immundities; yet indeed it is not in its own nature unclean, but made pure, as pure as the Art of the Artift can make it with the help of Nature, joyning Confanguinty with Confanguinity.

Which is ufually Named by Philosophers their Lyon Green.

T His hidden Body, or rather Chaos, the Philosophers have highly extolled and deeply concealed, but they usually call it their Green Lyon, which many missing apply to Venus, and some to Vitriol, which is all one in a manner, Vitriol being only Copper corroded by an embryonated Salt; but Fools, saith Ripley (in his Errors) call it the Green Lyon. I shall discover this Subject to you, so far as I dare, in this following Song.

<u>(</u>

He is the mean the Sun and Moon between, Of joyning Tintures with perfectness.

Learn then to know this Green Lyon and its preparation, which is all in all in the Art, it is the only knot, untie ir, and you are as good as a Mafter; for whatever then remains is but to know the outward Regimen of Fire, for to help on Natures internal Work.

As Geber thereunto beareth witness.

MOreover be not various, feeking that in many things which is verily but in one thing; for in all the world there is not any one fubject but this: *Ripley*, after the Rehearfal of all his Errors, tells you, That he never faw true Work but one: And Geber, *Exacte (inquit) fingula*

fumus experti, idque probatis rationibus &mihil invenimus præter folam unctuofam humiditatem penetrantem & tingentem & c. And Artephius faith, There is no other fubject in the World for this Art, naming it, although in a Philosophick manner, wonderous fubtilly. I counfel thee, with Ripley, to learn to know this one thing which I have faithfully declared, and I know what I have declared ex. perimentally to be true: Hè that underftands me will have cause to thank God and me for what Light I have given to Ripley : He that with me understands Ripley will easily difcern.

With the fecond which is an humidity Vegetable reviving what earst was dead.

O Ur fecond Water, or Menstruum, or Fire, is our Elixir, which is an Elixation of our Matters, or drawing forth, the Tincture out of our diffolved Bodies; which doth cause our dead Body to rife, and to spring forth in Springs and Branches, like to the tender Grass in the Spring out of the Field; and this so long until

56 until an intire Triptative Union be made of Body, Soul and Spirit. In this operation our Body of the Sun hath its dead moles turned into a living quick active Spirit, and our Compound after death begins to fprout, and to thew its true Vegetative nature, it is indowed with a green Colour, which is the fign of the growth of The Real Property of the Second State all things.

Both Principles Materials must loofed be.

TI

T

an

N

m

be

000 ple

HEre your Natures are changed, and hold one of another, and become one inseparably; that is, the Solary Nature is not to be divided from the Mercury, nor the Fire from the Water, but with one the other is always moved; and to though there yet be a *superius* and an inferius, an ascendens and subsidens, yet now quod est superius est sicut id quod est inferius.

And

And Formals, else they fand in little stead.

NOw between the two Extreams of Mercury and Sulphur, you have a marvellous medium ingendered: now the form of Gold is taken quite away, and it hath at prefent an accidental imperfect form, which is the mean through which it paffeth to its transcendent perfection.

These Menstrues therefore know, I thee reed.

L Abour with all thy might to attain the skill of these two first Menstruums Theoretically and Practically; the first is to be by thee prepared and proportioned in the beginning, before thou attempt any thing. When thou hast the true Nymphs Bath, then joyn this Spouse with her beloved Husband, and see if the will make his Body fall to funder in impalpable Atoms: Then let Saturn be thy Chamberlain, and let him gather together these diffevered members, and of them make one broth, in which is blackness compleat, after which followeth greenness; and

n

t

d

and then shalt thou know that thy Compound is by the living God endowed with a vegetable Soul.

Without the which neither true Calcination Done may be, nor true Diffolution.

HE who knoweth not the Myftery of thefe two Menstrues, can never attain either to Calcination or Diffolution of the Philosophers: The Myftery of the first confists in the acuating of thy Vinegar with the Blood of our Green Lyon, and the Soul of the Fiery Dragon, which is by seven Eagles, which are seven Cohobations and Depurations of thy feminine Sperm, till it conceive a spiritual seed, or true natural heat, to animate thy young King.

The Mystery of the second Menstrue confists in the true proportion of thy first Water, with its own Body, and the administration of true heat external, by which the combat between the Eagles and the Lyon may be stirred up; thus shall the Duel be ended, the Lyon rent in pieces, and the Carrion of its Carcass shall kill

N

th

in

we

the Preface of Sir G. Ripley: 59 kill the Eagles; and out of these Atoms shall the second Water be made apparent by Diffolution.

With the third Humidity most permanent.

T He third Menstrue is by Artephins called the second Water, for our second he doth joyn together with the first; although where he doth particularize the three Fires, he doth then distinguish three Menstrumms.

The like course many Philosophers have used in the description of their Operations, some omitting the first, or at least confounding it with the second, for the greater obscuring of the Art.

But we have (beyond what any have hitherto performed) particularly infifted upon the three in order, and have taken more pains in the difcovery of the firft, becaufe the wife Ancients have taken fuch pains to conceal that moft; and after that we have made an orderly proceeding to the fecond, which we have in like fort handled, and this being performed, we do now addrefs our felves to the third. This

This is called by Ripley a most permanent Humidity: and note by the way, that the first Water is called by Authors a permanent Water likewise; but take notice that there is a different reason for each denomination; for first of all, all Mercury is Water permanent, that is; the parts have no Heterogeneity, they will not leave one another in the examen of the Fire, but either all flyes and is unconftant, or else all abides and is constant in the tryal of Vulcan : and fo is our first Menstruum. And in this our Mercury and Common Mercury agree, belides the identity of matter, for it is the form only that diftinguisheth them. But in the next place, our Water is permanent with the Body, which Common Mercury is not; that is, it by digestion doth unite, not only adhere to it, fo that both together do make one Individuum, which is done by our fecret Conjunction. But laftly, when the Body is thus by our Water re-. duced, at last it comes that the four Elements are united in this Water. After Putrefaction and Purification, which is the last most laudable Tetraptive Con-- 17 junction,

th

11,

THis is our true Incombustible Mercury, for it is totally purged from all its burning faculency; Gold though it be a pure Metal, in respect of others which are imperfect, yet compared with our Stone it hath also its faces; but this when it is taken away by Putrefaction and Ablution, then becomes a total feparation of what is precious from what is vile, and as the Philosopher well faith, In the troubles of this our ftormy Sea, all that is pure will afcend, and all that is impure defcend, and will abide in the bottom of the Veffel in the form of a combuit Earth; then is made the new Heaven and the new Earth, pray to God then that thou mayft fee when there fhall be no more Sea. Yet I fay before thou hast this final Inceration, thou hast this most incombustible Menstruum, and most permanent, in which Nature and Art have

have confpired and made a Purification, beyond what Nature alone could ever have brought to pass.

Therefore this Mercury, though it be liquid and in the form of Mercury, it is notwithftanding Unctuous, that is, great with Child, which Child is Sulphur, which Sulphur it will in the end bring forth, and shall then be sealed up in the belly of this Infant; which is when all is fixed; and Mercury is then hidden under the fixity of Sulphur.

Hermes Tree unto Ashes is burnt.

I doth therefore naturally incline it felf unto Inceration, for Earth is the Nurfe of our Stone, and in it is its virtue attained, and its perfection intire, according to noble Hermes in his Smaragdine Table ; Vis (faith he) ejus eft integra fi versa fuerit in terram. By vertue of this third permanent pure incombustible Water, thou that at last attain a total Inceration; for this Water though it be wholly Mercurial to fight, yet hath it in its own Bowels its own Sulphur, nay it is

all Sulphur, and that all incombuffible. This work is called the burning of Hermes Tree to Afhes, which is done thrice; firft, into a black unctuous Calx, as impalpable as Atoms, which are only to be different in the Sun-beams : fecondly, into a fine white Calx, in which is the Moon in the full : the third, a red Calx, in which the Sun is Orient. Now know that the firft Calcination is from the vertue of the Sun, in which the Sun feeks to rife, but by reafon of the equal oppofition it finds from the water, it is beclouded, and after through the interpofition of the Earth, totally Eclipfed.

This Fire therefore, becaufe of the mixture of it with the natural Fire of Sol, which is in it diffolved, is called unnatural; the first Fire of our Water is called Fire against nature, and the Fire of the Sulphur of the perfect Body is called Fire of nature. In this operation, through the power and will of the Almighty, the Body which hath been fo long dead, is by this Water quickned, and actually sprouts like to a Vegetable; for when the pores of it are opened by

64

the moistning of our Water, it straight begins to follow the Spirit upon the Fire, the Spirit then doth mount aloft; which the Body thus made tender cannot follow, but as the Poet saith, non passibus. aquis, as a Son that is little followeth his Father. It therefore in a token of its friendship with the Water, doth bud forth like to the tender Frost upon the furface of the Earth, and retains a quantity of the Water with it felf, occupying a middle room between the bottom and the top; in which respects the Philosophers have called it their Soul, which to fhew its union to the Body, rifeth no' higher then it can have a root or Basis below; and to manifest its love to the Spirit, it doth as it were climb after it higher and higher for its season, until at length it return from whence it came : And verily this Soul is the Magnetical Medium between the Spirit and the Body, which doth defire the Spirit as its true drink; and therefore as it grows dry, it doth attract the greater drops of fweat, which falling to the Earth, arife in a pleasant fume, and do moisten the grow-

the Preface of Sir G. Ripley: 65 growing virtue with a pleasant dew, by reason of which it grows every day more and more.

This Tree of ours fome have compared to one thing, and some to another ; fome to a Cypress or Fir-Tree, which indeed may feem to refemble it; others to Haw-Thorn Trees, as Ripley in his Gate of Cibation; others to Shrubs and Bushes, others to thick Woods, and in these Woods, faith Lambsprint, there is a Beast all over black. I confess there is a similitude between our Germination, and all these; others, because of the Humidity of the Compound, which is ever and anon returning by drops, have likened it to a moorifh low Bog, in which Rushes grow, and Toads keep; others have called it their Coral, which is indeed the fittest comparison, for in our Tree there are Shoots and Sprigs, without any thing that may be properly likened to Leaves : as then Coral is an union of a Vegetable and a Stony nature, so is it in our Tree, (for Stones, and Minerals are of one Composition)our Tree is Metalline, and yet through the E 2 power

power of God it feems to Vegetate. 2ly. Coral grows under the water, where one would think no Vegetable could grow; ours alfo grows in a heat in which no Vegetable but it self can grow. 3ly. Coral hath many Sprigs and Branches without Leaves; so is our Tree. 4ly Coral as it is under water hath a most exquisite biting tast, which in the Air it quickly loseth ; fo our Stone, or Tree Metaline, in its place is of a pontique Fiery nature, but taken out, it in a fhort space loseth the same irrecoverably. 5ly. There are five forts of Coral, the common Gray, the Milk White, the Green, the Bloud Red, and the Black ; fo our Tree is at his periods of all these colours, and in this form, which Tree by the heat of the Fire is dryed to a Calx, which is called the Ashes of Hermes Tree. Laftly, Coral is more heavy then any other Vegetable; and fo is our Tree beyond all Vegetables, yea and Coral it felf, in ponderofity. It was not therefore a fortuitous comparison that Philo-Sophers named their Mastery the Tree of the Eesperides, nor is it in vain that they bring

one:

the Preface of Sir G. Ripley. 67 bring in Jason pouring Broth at the Root of it to attain the Mastery; for verily the wife Philosopher (noted by Jafon) fo governing his Fire, that the Lunary or Water of the Moon may return to the Earth in which these Trees grow, the Earth will at length be fo dryed by the heat of the Sun, that it shall afford the Tree no more moisture; then shall the Tree it felf be calcined by the prevailing heat, into a Powder impalpable, first black, then white, then red. Therefore is our little Glass by Flammel in his Summary named the Philosophers Garden, in which the Sun rifeth and fetteth, and the Philosophers Tree is moistned with the dew of Heaven day and night without intermission? Ra bas hadd lis omno

It is our natural Fire most fure.

T His Mercury drawn out of the Sun is the true natural heat, in the acuating and ftirring up of which is the whole fecret of the Maftery; this is the honoured Salt, when this is made to appear thy operations will be fo admirable, that they E 3 will

68

will take up thy whole worldly content, and with their variety the time will feem fo fhort, that thou wilt not take notice of any tediousness in the passing of it.

Our Mercury, our Sulphur, our Tincture pure.

THis is our Mercury which cannot be attained with money, which is nothing but Sulphur, and Sulphur which is nothing but Tincture, in which all Elements are proportioned perfectly.

Our Soul, our Stone born up with wind, In the Earth ingendred. Bear this in mind.

T His is our Body, which is now become all Soul and all Spirit, all the pure parts are feparated now totally from the uncleannels of the dead; it is our Stone, though it be as yet volatile, yet it hath all in it effential to our Stone, and therefore though it fly and fublime for the space of seven times, yet his Nurse is the Earth, and therefore to it as to its Nest it returns, and in seven sublimations what was before all Heaven, will now the seven times is the Earth of the seven seven the seven times to its the transformed to the seven times to its the seven seven times to its the seven times to its the seven seven times to its the seven times to its the seven seven times to its the seven times to its the seven times to its the seven seven times to its the seven times to its the seven seven times to its the seven times to its the seven seven times to its the seven times to its the seven times to its the seven seven times to its the seven times to the Preface of Sir G. Ripley. 69 become all Earth. And this is the period of all the Rotations, and Natures confummation.

This Stone also tell thee I dare, Is the vapour of Metals potential.

A Nd now if any fhould demand of us what our Stone is, we fhall answer him, that it is Gold digested to its height of purity and perfection, through the cooperation of Art and Nature; but the means to get this, is to learn to turn thy Body into a vapour, that is, into Mercury, which then ascends in form of a vapour.

How thou shalt get it thou must beware, For Invisible truly is this Menstrual. (cal, Howbeit with the second Water Philosophi-By separation of Elements it may appear To sight in form of Water clear.

BUt the means to attain this is not a light work, it requires a profound meditation, for this is the Seed of Gold, (which as the Poet fang, reclufa refedit longins) it is involved in many links, E 4 and

and held Prisoner as it were in a deep . Dungeon; fo that as the noble Sandivow hath it, it is the work of a very wife Philosopher to let loofe Sulphur; he that knows not our two first Menstruals, is altogether fhut out from attaining to the fight of this third and last Menstrue; yet he who knows how to prepare the first Water, and to joyn it to the Body in a just pondus, to shut it up in its Vessel Philosophically, until the Infant be formed, and what is the greatest of all, to govern his Fire dexteroully, fo as to cherish Internal heat with External, and can wait with patience till he fee his figns, he shall see the first Water will work on the Body till it hath opened the pores, and extracted partly the Tincture of Sol, which as it comes out gradually, fo it contests with the first Fire against Nature, fo long till they be reconciled in an imperfect medium; in which they, like to weary wounded Combatants, lye gasping and panting for breath, and at length dye; and then appears the fecond Water of the wife, which doth alcend and defcend to long till it ruine the dead Carthe Preface of Sir G. Ripley. 71 Carkafs, and then a Soul comes into it, and it vegetates and circulates, and changeth colours fo long, till Blacknefs vanifhing there be made a perfect union and univerfal temperament of Elemental qualities, never more to contend together: then the whole Compound for a time appears like to a new glorious Water, glittering like Oriental Pearls, and Fifh-eyes.

e

Of this Menstrue by labour exuberate, With it may be made Sulphur of Nature.

This is it which Raymund calls his Mercury exuberate, as much as to fay, Mercury with Child; Artephius calleth it, the Salt pregnant, for it hath Sulphur actually hidden under the Mercurial quickness; therefore it by digestion is easily turned into our Stone, which is Sulphur, or Fire of Nature.

Wind Shares of the state of the state of the

If it be well and kindly acuate, And circulate into a Spirit pure, Then to dissolve thou must be fure Thy base with it in divers wise, As thou shalt know by thy practise, That point, &c.

THis Mercury thus renovate or new born, may by the Philosopher be diverfly handled; for he may take his work from the Fire, and circulate and cohobate this Mercury by a peculiar operation, which is partly Mechanical, till he have a most admirable pure subtile Spirit, in which he may diffolve Pearls and all Gems, and multiply them or his Red Stone, before it be united with a Metal in projection for the making of Aurum Potabile. And in this Mercury thus circulated, is doubtless the Mystery of the never-fading Light, which I have actually feen, but yet not practically made. In a word, every one who hath this exuberate Mercury, hath indeed at command the subject of wonders, which he may imploy himself many ways in both admirably

the Preface of Sir G. Ripley. 73 rably and pleafantly. And certainly he that hath this, needs no information from another; himself now standing in the Centre, he may eafily view the Circumference, and then operation will be, next to the Spirit of God, his best Guide. Know then, that if thou be a Son of Arr, when thou art once arrived hither, thou art fo far from being at the end of thy fearch, (unless thou make Gold to be thy final object, and fo thou shalt never come hither) that thou art but now come into the Mystical School of the hidden wonders of God, in which thou mayst every day see new Miracles, if thou be fludious and defirous of knowledge, which all Adepti are ; they prize skill before any earthly thing, and therefore refuse Honour and Pomp, and retire only to the beholding of God and his Works, in this admirable Looking-glass of the most hidden Mysteries of Nature.

For fo together they may be circulate, That is, the base oyl and vegetable Menstrual, So that it be by labour exuberate, And made by craft a Stone celestial.

YEt doth not wildom come naked, but with her fhe brings riches and length of days; for this exuberate Mercury is an Hermaphrodite, and may without taking out of the Glass be circulated into a fifth Effence.

fly

th

Bo

Now the union between the two Principles, is the very true caufe of this circulation; for though in this last Menstruum there is an infeparable onenefs. yet the Components do give each their most noble quality to exalt the transcendency of our Medicine. The extreme Components of this third Menstruum, are the Sulphur and Mercuriality of the second; as the first Menstrue, and Sol our Body, were the extremes of the fecond. The bafe oyl, our Sulphur is called, for he is the unctuous Dragon, or Earth which lyes at bottom without wings, and is the Basis as it were of the Work. The Mer-

the Preface of Sir G. Ripley: 75

Mercury is called Vegetable, for that it flyes and returns, and makes the Earth to fprout and bud with tender branches. These two (the base oyl or Sulphur, and the vegetable Menstrue) at last make one intire indivisible substance, which is of an Hermaphroditical quality, the Man is the Woman, and the Woman the Man ; the Sulphur the Mercury, and the Mercury is the Sulphur; in this respect the Earth flyeth as if it were Heaven, and at length the Heaven will precipitate in the form of Earth, and then is our work at an end, there is the Harvest in the South, when the glorified Soul is become a spiritual Body, which is called our Stone of Paradile:

76

Of nature so Fiery that we it call, Our Basilisk, or our Cockatrice, Our great Elixir most of price. For as the sight of the Basilisk his object Killeth, so slayeth it crude Mercury, When thereupon he is project, In twinkling of an eye most suddenly. That Mercury then teyneth permanently All Metals to Gold and Silver persite. Thus guide thy base both red and white.

THis Heavenly Earth is true Mineral Fire, which is then refembled to the Sun in its Summer Solftice; it is called Venom, becaule it penetrates Metals fo wonderfully; it is called our Bafilisk, our Cockatrice, our Tyrian Poifon, though indeed it be an excellent Medicine, in which respect it is called our incomparable inestimable Elixir. But the denomination of Basilisk it retains from its sudden operation upon Mersury; for it penetrates it in projection, as warm Oyl runs into finking Paper, even to the profundity of it. Let thy Mercury therefore be taken as it is crude bought at the Apo-

of

fir

the Preface of Sir G. Ripley. 77 Apothecaries, and thou shalt set it in a Crucible to the Fire, in fuch a heat as the Mercury may not fume; and when it is fo hot that it is ready to fly, which you shall difcern by a spurtling noise, throw uponit of your Medicine as much as will teyne it, and you shall see that in a moment it will enter it, and straightway the Mercury loseth its flux, and stands congealed. Then it is to be melted by a Fire of fusion, and you shall find pure Gold or Silver, according to the quality of your Medicine. But if you cast your high Elixir in too great a quantity on Mercury, you shall find in the Grucible after projection, a brittle massof the quality and colour of the first Medicine, only of a lower virtue, which then you may project upon any inferiour Metal, and it will transmute it into most perfect. This operation is not apparent or to fight, as is the work of Sophisters, but it is both inward and outward, for it transmuteth into a perfect species, and not only to fhew. This is the way of projection both of thy white and thy red Quinteffences, first to cast them upon Sol or Luna, according

cording as thy Medicine is, and after that to make projection on *Mercury* again and again, till you find the true extent of the virtue of your Stone.

Aurum Potabile thus is made, Of Gold not commonly calcinate.

Nd now I come to the fecond reward A that Wifdom doth bring with her, and that is length of days; and here I have transposed some few Verses of Ripleys concerning Aurum Potabile, that what he faith in this point may be reprefented in view together, Method inviting me to it. Some propound the Medicine. of Aurum Potabile to be Extracted out of Sol pure, by corroding with Aqua Regia, and afterwards levigating it by reiterate Calcinations in the Fire, and manual Contritions. This Calx fo fubrilized, some attempt to refolve by Men-Arnes, (as they call them) but in vain, there being only one Menstruum that hath the power to refolve both Gold, and all fublunary Bodies, to their first matter. Paracelfus the first Author of this, did name

pl

gro

Whi

the Preface of Sir G. Ripley. 79

name this diffolving Water his Alkaheft, his Ignis Gehenne, his Corroficium Specificum, with many other names. This Medicine thus made of Gold by the Alkaheft, as it is Philosophical and real, so it is very excellent, and known only to the Adepti.

Yet this is not our great Medicine, for this being but a refolution of Gold in its unary fimplicity, doth afford to us only the most exquisite Medicine that is in Gold, as it is made and left by Nature, which partly for its fimple vertue, and partly for its Metallick determination, doth not enter our Constitutive Principles, and consequently cannot touch or reach long life.

But of our Tincture which will not fade, Out of our base drawn by our Menstrue circulate.

B Ut when as we have by our Art exalted Gold from an unary to a millenary perfection, and advanced it from its groß corpulency to a Spiritual Tincture, which is unfading, and of all Sublunary k things

things the most durable, then out of this fo glorious and triumphant in an universal virtue, we do make an Oyl so called by us, (though it be permiscible by mixture in any Liquor) which Oyl is the very Tree of Life, which prevails and triumphs over all the Miseries in the world. For it is not Metallum, but transcending all Metalline things : This Tincture is extracted out of Gold, not as Tinctures are drawn by the Sal Circulatum of Paracelfus, but by an universal changing of the Sickness of the Metalline off-foring, into a true posture of Health ; by which means it is able to heal all Metalline Bodies from their Leprofie, and being refolved by its own Vegetable Humidity, which is our first Menstrue, circulated till the Water have a ferment from the Bodies, and the Bodies from the Water, it will give a Spiritual Tincture, sparkling like the flame, to talt most fweet, to fmell most pleafant, the most incomparable Treasure of the whole World.

And

This Caftle round by force Inexpugnable, Whofe Composition's Homogeneal, Immortal ever stands, that none is able To conquer it by force, though frand withall Concur; its standing is so firmly stable, No way to storm it, though we could recall Great Hercules, 'tis so inviolable : And yet withall its Beauty is so amiable.

Twelve Gates it hath, and yet they are but one, And these twelve Gates have but one only Lock.

So that you either open all or none; Nor can you force it open with a knock, For violence cannot it break in funder, Those who attempt it the event doth mock; Nay though you could call down the dreadful Thunder,

It would nothing avail; who fo his ftock Shall thus imploy, may walk at length in thread-bare Cloak.

There

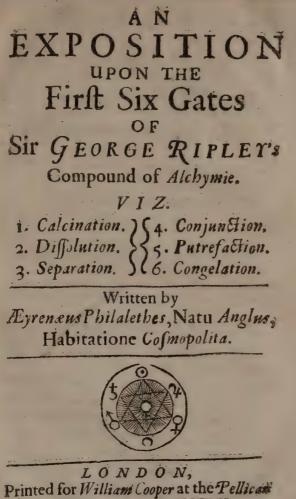

An Exposition, &c.

There is one only Key, this learn to know And make, then I will you a Master name. This Key the entrance of the I ock will show, And being enter'd will unlock the same: Which being done, to you shall open fly The twelve Gates of this Castle, great in

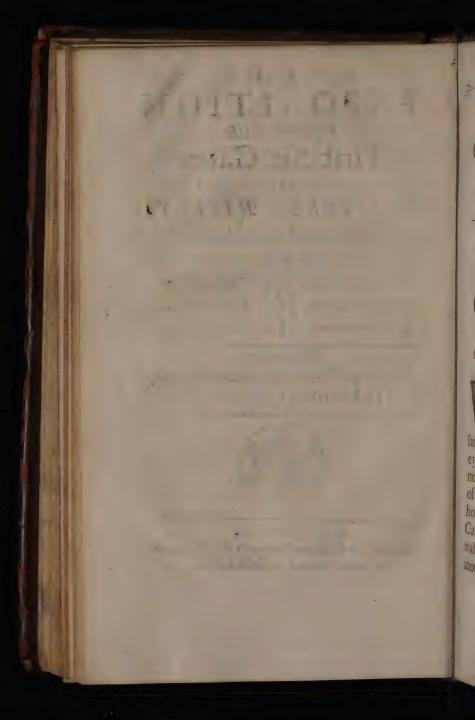

fame, Little in bulk, which once I did espy; Also within it a most noble Game Fought 'twixt an Eagle volant, and a Lyon' tame.

FINIS.

Pr

in Little Britain, MDCLXXVII.

Sir GEORGE RIPLET'S Compound of Alchymie Expounded by a Son of ART.

The Contraction of the second second

.64

The first Gate opened, Which is CALCINATION.'

Calcination is the Purgation of our Stone.

E have led thee as it were by the hand through many a wafte Field, and many a Defart and Thicket, and now lift up your eyes and behold where you are, and now welcom my Friend into the Garden of the Philosophers; here you may behold (like a Landskip) a very glorious Caftle, walled about with a very high wall, and twelve Gates one following another hindering your entrance and G 2 possibility

98

possession of it at will, one being opened the reft open of themselves, and yield to thee a far more renowned Conquest, thenever Cafar or Alexander won. The first Gate loe is as it were dug hollow into the Earth, and little to be feen above the Superficies : view well the Infcription which is written over it, which is the words of that Curfe which God inflicted on Adam, in the day that he fell, Dust thou art, and unto Dust thou Shalt return. Mark the Escutcheon that is set forth upon the Gate, this fignifies unto thee, that some Great Person is dead within, therefore behold the Attendants all ftand in Mourning; amongst whom one with this verse of Solomon, I am black, but comely, &.c.

This Lady the Sages have called Juno, or the Metallick Nature, which is indeed very comely, yet black, for why the Sun hath fhined upon her. Another who feems to fupply the room of the Porter, fpeaks unto you in these words, Nothing entreth hither that defileth, or that is unclean. But enough of this, we must not here stand gazing, lest we be taken for Spyes; n ha pli pli of W lei

25;

First of all then know, that for his parts he is a very stupid Fool, there is none more simple among all his Brethren; yet is he most faithfull to his Lord, and doth all things for him most

03

pru-

prudently, ordering all things in the Family very discreetly; which I may rather ascribe to a natural instinct, then to any quickness of parts. He is very faithful, for that cause he will never either ask or answer any question, but goes on filently: Nor will he ever go before you, but follow ; you mult be very wary how you lead him, if he can find an opportunity he will give you the flip, and leave you to a world of misfortune. By his countenance you shall know whether he be pleased or displeased; therefore lay bonds on him, that is, thut him close where he may not get forth, then go wifely before with heat, and ever observe his countenance as he follows ; his anger you shall know, by redness in his countenance, and his fullenness by his lumpish behaviour; in his good temper he is indifferent active and merry; and fo you Ihall pass on forward, or turn, or go back, as you see his countenance and temper inclined. In the next place you are to understand, that he was born to be a drudge, and is the very Servant unto all his Brethren; and hereupon he doth as it Browieg - Lever Setting at the strange and a were

Sir G. Ripley's first Gate. 101 were monopolize the whole toyl and task of labour to himfelf, and if you go about to do any thing, he will prefently take fnuff, and will leave you all the work to do, and will not do one ftroke more.

Thirdly, he through long cuftom hath gotten a habit of perpetual working, and therefore if you allow him one hours respite, he will never work more; for in his Fathers house he committed the offence of Cham, and is therefore judged to be a Servant of Servants : his body is very tender and naked, yet will he have no Cloaths, nor will he endure any Confolidation of parts without exception; for in his youth he offended with Ruben, and went up to his Fathers Couch, and was for that doomed to a perpetual inconstancy, and is as unstable as Water. These in general are the qualifications of your Guide, and you must address your felf to him accordingly, or elfe your labour will be in vain.

ays

THen I lift up mine eyes, and behold I faw Nature as a Queen glorioufly adorned, fitting upon her Throne, and in her hand a fair Book, which was called, Philosophy Restored to its Primitive Purity; whom with low submission Idid obeyfance to, and the gracioully took notice of me, and gave me this Book to eat it up, which I did, and straight-way she had another of the same in her hand : Then was my Understanding fo enlightned, that I did fully apprehend all things which I faw and heard; and when I approached to any Gate or Door, fraightway (as though they were acted by a fensitive Spirit) they opened of their own accord: And all in the House did fealty to me, and faid that I was to be honoured as Lord

Lord of the place : For, fay they, the Queen and He are in love united, and fire moreover bath plighted her troth to him. Then I confidered with my felf, and be-- hold the Book that I had devoured (like a Charm) had fo commanded my Spirits. that I could think of nothing more than the enjoyment of this rare Beauty which I had beheld : And while I was full of these thoughts, behold I heard a Voice behind me, faying, What wouldest thou in this World? I was a little aftonished at the Voice, but yet boldly answered, Nothing but that I might once more see that admirable Perfection which once I beheld in a Nymph, which not long fince I faw, who with seeming affection did salute me, and gave me a Book to eat; which when I had eaten, my Intellectuals seemed as though the Candle of the Lord had beenkindled in them: But fince I could never fee her whom my Heart longs for : Ob that I might only be fo happy again ! Then faid the Voice, Thou art happy in that thou hast seen her, more happy in that she gave thee that Book, which few in an Age attain to ; most happy in that thon couldest and didst eat it, which every one Sect. 1

Sir G. Ripley's first Gate. 105 one that hath it cannot do : She therefore whom thou seekest for, is gone into her retired Solitudes, and as a Legacy hath left thee two great Treasures, the Treasure of Riches, and the Treasure of Long Lif: Then faid I, Ah Sir, this you tell me of, is nothing but an aggravation of my misery; for all the wealth in this world I count but as a straw in comparison of the enjoyment of that most admirable Lady's presence, whose Service I should take for a greater happines, than if I were Master of all the World besides. If then I may not see her again, my Life will be to me a burden, and to what then will Long Life avail? Thus I fat bemoaning my felf, and I heard a shrill Voice as it were close by me, and I looked fuddenly, and behold an unspeakable Light, in comparison whereof the Sun it felf seemed dark; and close by me I faw a most fecret place, and in it a fecret Room of Diaphanous matter, and round: and within it this Lady whom I formerly had seen, upon her Throne; and another in the person of a King, in most gay Raiment, as if it were a Robe of beaten Gold, which reached from his thoulders to

e

19

rt

DY

Ŵ

ţţ

J.

to the ground, and a Crown of pure Gold on his head; and a third perfon, who like a Water-bearer had a Pitcher on his shoulder, and in the midst of it there burned as it were a Lamp! The fight was excellent, yet I could not be pleased, for that I saw this Lady stark naked with this King, fo in private; and while I viewed the Room, I found it was exquisitely closed on every side, so that it feemed as if it were made of one intire piece of Crystal. I marvelled at what I faw: for the Houle was but small, the Chamber lefs, and the Ciofet of Crystal to fight no bigger than a fmall Egg; and the three Parties, with all the Accoutrements of them, might well have been inclosed in a Hazel Nut: Yet was their Delineaments fo lively, that I might eafily discern her intire shape, whom I could not but with distracted thoughtfulnels and a fad countenance behold; which fhe perceiving, faid unto me, Friend, Why art thou fad? I am not fad, quoth I, most Noble Lady, but am pensively meditating on what I behold, which doth not a little amazeme, the fight not being to be parallell'd

Sir G. Ripley's first Gate. 107 lell'd in John Tradescants Chamber of Rarities, which is the System of the Novel Rarities of the known World : For whom I lately beheld glorious upon a Throne in the Majesty of a Queen, I now see cloistered up in a small Diaphanous Pix, in a stature fo small as is scarce credible : Moreover, whom I deemed so piously virtuous a Lady, to be foretiredly naked with a man, only attended with a Water-bearer, makes me very thoughtful what this thing should be. Moreover, it was my hopes fo to have ingratiated my felf into your favour, as to have been a Servant unto you, who I fee are otherwife provided of a Lover. Then faid the, My Friend, what you admire in this strange Metamorphofis of me, know that it is by a Magical Vertue, which is alone given to me from GOD, my immediate Lord and Ruler; and for any Diabolical Art, which your Scruple feems to manifest your suspition of, it is because of your unexperience in these things ; and this your Ignorance is no way provoking unto me, for in these Affairs (though a man) yet you are but a (hild ; and this liberty I allow all my Sons while they are Children, so to speak, so to think, and

and fo to act ; and I love to hear and anfiver their childish prattle. Know then that the Devil is but one of my Servants, and in my Kingdom he doth ferve GOD, his and my Lord: And though of all my Servants he is the worst, yet he can do nothing of himself, either without me, or against, me, or above me : He for the most part is a deceitful Jugler, and doth make things appear, that are not ; but whatever is actually effected by him, is nothing but what is in my Power : He only applies Agents to Patients, and adds a little of his own villanous qualities, as a circumstantial aggravation of the horror of what he thus (by my virtue) brings to pass, and then his villanous mind attributes that to himfelf, which is my Act, that so he might arrogate the bonour due to my Lord and his Master. Now I will tell you a strange thing, which yet is very true : I am obedient to all my Subjects, which are many, and they obey me; Irule them, and they do as it were inforce me, for fo my Lord hath pleased to. ordain it : If they call me, I am straight at hand; yea, in my Body which thou jeest (which is no Body (but only reprefentative) 1. 2. 18 for

Sir G. Ripley's first Gate: 109 for I am all Spirit) I feel the Sympathies and Antipathies, the Actions and Pallions of every thing in the World; and I must be always present, for nothing is or can be well done without I be present : I always work according to the subject and its disposition, which doth alter the effect wonderfully. In a word, whatever thou feeft that I am, and more then thon canst see by far, though thon hadft the Eyes of Argus. My Rule is not as is the Rule of Princes among Men, but I am ferviceable to all, yea to the leaft Worm in the World ; and because I am so ferviceable, therefore my Master bath appointed that nothing can or may disobey me, or offer violence to me; the Devil here hath no power, though malice enough : Therefore my Lord hath given me his own Diploma to make me the more Honourable; first, An Omnisciency of all things which are done in the World, as touching the Being, Confervation, or Mutation of them; and next, An Omnipresency, by which I am every where present at once, and I am seated in the Will of God, which is my Centre, All my Subjects are put under Man, therefore he hath a free power to ast any thing within bis

that you see me naked with this King, know that this place and my Kingdom are in the State of Innocency, though we are by the Fall of Adam laid subject to Vanity; and till the final Restitution of that Fall, I am forbidden to work any thing of my own accord beyond the state of fading corruptibility, though all things have an incorruptible Spirit, which when Heaven and Earth Shall be renewed, Shall cause an Immutable Glory in all these things. Know then that this King is my Servant, and he hath many Brethren who in their passage to him are taken Prisoners, and kept in bondage, and there is no way to Redeem them, unless he give his Flesh and Blood for their Ransom, which cannot be effectual, unless he die and arife from the Dead : This I cannot perform alone my felf, nor can any help me herein but Man alone 3 for God hath here limited my power, I cannot bring Agents and Patients together, though he hath given me power to work on them being composed, and to effect what may serve for the Ranfom of those poor Captives, and he hath given man a free power to act in subordination to him in the World, though through H the

the Fall the Wings of this power are not clipt at all, but clogged with Ignorance, that it is very nneffectual in comparison of its virthe. If those couldest but understand and believe, thy very Soul would command all Nature in the whole Fabrick of it : for if thon didst but know things as they are, thon wouldest withal clearly fee the Dignity of thy Soul, being the Image of God ; and this would command Faith, and kindle Defire : Now Faith and a kindled Defire in the Soul is that extatical Palsion which attracts the whole Phanomena of Nature. This is the Dignity of a Mental Man. Now then, my Friend, hearken to me, and what I advise, that do ; help me in what I cannot, and I will help thee in what thou canst not; fo shalt thou be (to GOD subordinate) Lord both of me and mine; and the Blood of this King, which redeems his Brethren, will give thee a Medicine to command all the Imperfections of thy mortal Body; and though it be no Antidote against Death, the irrevocable Decree being past, yet it triumphs over all the Miseries of Life, both of Poverty and Sickness, and it possesses a Man of the most incomparable Treasures of this

fro

inc

m y

am

Sir G. Ripley's first Gate. 113 this World. Then full of Admiration, with Tears for very Joy trickling down abundantly, I befpake her, and faid, Lady, I thank you for your so great favour to me, as so familiarly to discourse with me; Now then, without any Complement, I am yours (ad usque aras) and whatever you please, that will I do. Then said she, Under this Chamber and Clofet there is a Stove, put Fire into it, for this King must fweat to death. Ab freet Lady, faid I, and what will become of you ? Care not you for that, faid she, do you as I bid you : But yet farther to fatisfie your curious mind, let me tell you, That I indure without hurt the most violent Fires which are or can be made, for I am in them all, and no lefs in the most frozen places. Then I confidered, and methought my Understanding it was inlarged, and I perceived the extent of Nature, and of a sudden she appeared not to my fight; but where she was I faw a most exquisite Light, which took up an incredible small room, and methoughts my Head seemed as it were diaphanous : And while I confidered these things, it came into my mind to wonder what was H 2

become of my Guide, for I mils'd him. While these thoughts perplexed me, an Answer was given, as if from an intelligent Spirit within the Glass, saying, Let not thought's fill your mind, he whom you feek is with us, for fo it must be, this King is his Lord. This straight made me view the complexion of the Water-bearer, and his countenance told me that he was my very Guide: Then I viewed his Pitcher well, and I found that his Pitcher was clear as pure Silver; and what was strange, the Bearer, and the Pitcher, and the Water in it were one; and in the midit of the Water, as it were in the very centre, there was a most radiant twinkling Spark, which fent forth its Beams even to the very furface of the Water, and appeared as it-were a Lamp burning, and yet no way diftinguishable from the Water. The Voice then spake to me a second time, Delay not to put Fire under us, and govern it as you shall hear the Voice direct you. Then I put Fire in at the open door at the top of the high Turret, and Coals upon it, and caufed my doors to be ftopt both above and below, and

waxed bigger and bigger, until the Water appeared no more, but she her self had transmuted its whole substance into her shape. This fight I beheld with pity, for the (far unlike unto the first Lady) was wholly impatient of the heat which I had made, and yet was fo inclosed in the Clofet that the could not get out ; the fweat therefore even as though the would melt, and feemed as though continually fainting : Then the King (who feemed as it were glad of the heat) feeing her knew her to be his Sifter, his Mother, and his Wife, and compaffionating her estate, ran unto her and took her in his . Arms, and the feeling him, did fo ftrongly embrace him, that he could not hake her off, and with her fweat partly, and partly with her tears, the did to beftream his Kingly Robes, which thone like unto Tagus or Pattolus, that they were all fuddenly changed into a colour Argent : the King loving her exceedingly, asked her what the defired ? She answered, That - her defire was to have of him Conjugal Fealty; for, faid flie, I cannot endure this heat, but I must die in it, and without me your High-

out recovery. Then my Eyes were opened, and I faw Nature walking up and down among the Carcales, and in her hand her unparallell'd Lamp; and taking a more ferious view, I faw in those rotten Atoms the Idea's of all things natural and fupernatural; and I found the dead King with his Wife were intombed in a Field Sable, and the Tomb as it were of polished Jet or Ebony; and as in that place all things were strange, fo most strange was it that the Tomb and the intombed Carcals were one, and that infeparably. Also upon the Tomb I found written a Prophecy, viz. That they (if the Fire were kept equal and continual) should rife again, and be more glorious and powerful than ever they. were before. Then faid I to the voice which is in the Glass, I must be directed both what, and how, and when to do. The voice answered me, Take no care, only do as I shall direct, and all shall be well; in the mean time you may view the places that are about, only be fure that you neglect not your time of attending here : And for to take away the tediousness which the

out

the length of time, would otherwife work, ask of me, and I shall inform you in whatever you defire, por shall I think my discourse to me a burden, so you will not think your labour a trouble. Then faid I, Not fo; though I should be bound to ferve you during my whole Life, yet fhould I count it a priviledge, not a burden. Then the gave unto me as it were a Ball of fine Silk, wound up as on a bottom, and faid, Make this fast to a Pin of this Tower, and then go round and behold the place, it may thorten the time to you ? Carry this bottom with you, and unwind it as you go, and by it you may return till you know the place. le serie, and bemore elorse al

But do not after the common guise.

Then I paffed along, and was no fooner out of that place, but a very thick milty darkness apprehended me, to thick that I might feel it 3 and though my head were as it were transparent and very light, and I took also a Candle with me, which was burning there continual-

1

in

WC

ly

Sir G. Ripley's first Gate. 121 ly at the entrance of the Tower, yet the darknels was luch, that it would not receive the light, for they were not homogenial, but were a little dif-joyned by the Rays of the Light, and as it were here and there condensed into strange figures, as of Birds, Beasts, and creeping things of monstrous stranges: And by reason of this opposition the Rays of the Light extended but a little way, and the Light most clear did shoot as it were in Beams, and the darknels stood as it were in clusters by it felf.

There were as it were a multitude of men, who feeing my Light in my hand, which they could not differn well, they being in that dark which would not be inlightned, but as through a thick cloud they beheld my Candle, and judged it ominous, and left their flations: for their eyes with dark and fmoak were fo tender, that my Candle over-poured them, and they could not bear its luftre; therefore they crying out, ran away. I mufed much at this, how they could be in fuch Cimmerian Darknefs; and as I wondered, I efpied that they had with them

e

0-

ŗy

e,

I

ly

them Light as it were of Fox-fire, or rotten Wood, and Glow-worms Tails, and with this they fat in confultation, reading Geber, Rhasis, and fuch whom I heard them name, and commenting on them, not without much pleasantness : Then I confidered that the Light which I had brought with me, did not enlighten the place, but stood separated as it were from the darkness; and withal I remembred that once there was Light in the World, and the darkness comprehended it not, and that darkness had a falle fire Light of its own, with which it feemed to its inhabitants wonderous well inlightned : I fet down my Candle, and went with my Thread in my hand, by which I intended to return. When I was gone out of fight of my Candle, my head began to feem as it were opacous, and a wind had almost blown me down: Then I took my bottom of Thread, and made it fast to my Girdle, lest it might drop out of my hand; and well it was that I did fo, for foon a Vertigo came upon me, and I fell and flumbered ; and when I awaked, methoughts it was no more darkmes. Sir G. Ripley's first Gate. 122 darkness, but day-light about me: I wondered at the very strange change, and still felt for my Thread, which by that Light I could not fee, but only feel it. I began to look about me, to see where I was, and behold I was in a ruinous place of many millions of turnings, each leading feveral ways; and every room was to inlightned with Fox-fire and Glowworm-Tails, that for want of a better Light it seemed as if it were day: I took out of my Pocket a small Book to see if I could read in it, it was called Enchiridion Phylica Restitute, with an Arcanum at the end of it, and I could not read one word in it. There met me a man aged and decrepit, his Face rugged, his Eyes bleared, his Hands and Fingers corraded, and faluted me, and faid merrily, What Book have you there ? It is, faid I, Arcanum Hermeticum. It is a good Book, faith he. He and Sendivow are the two best that ever wrote. I but, said I, I went to peruse my Book, and I can read not one word in it. That's strange, quoth he; let me see it : Then I shewed it him, and he read out of it fuch strange things that

124

that I never had heard of before; and Sandivogius, faith he, is of the fame mind. Then he begun to read in him, and read fuch Proceffcs that I had never heard of. I do remember well the Authors, and what they wrote, but never to my remembrance did I find what you read in them, faid I. Look on them your felf, faid he, and you shall find it plain : I went to look on the Book, but could not diftinguish any word in it; which made me wonder. Then I thought with my felf, that as that Light had a peculiar difference from that Light which I faw about the Tower where I was before, for it might have its peculiar Objects : This Opinion I had confirmed by this, for that having Geber and Rhafis with me, I tried how I could read there, and all the Proceffes I could read very well, only fome places seemed as it were left out, and a diftance of white left : I knew that my Books were perfect, and some of the places (which were (as they feemed to me) left out) I remembred very well to be those places in which the Truth was couched in few words : Then I returned by my

Sir G. Ripley's first Gate. 125 my Thread to my Candle, and straight my head returned to its former diaphanity: I took my Candle in my way, and of a fudden all my places that feemed light before, returned to be Cimmerian darknefs; only with the time that I had been there, I found my Eyes were beginning to grow tender, and imarted and itched at the first glimple of this true Light, which then in comparison of the Light I had before feen, did not feem barely Light, but the Super-Cœleftial Light of Paradife. Then I demanded of her with whom in the Glass I had former converfe, concerning what I had feen. She told me, That they were fuch who wrot in Alchymy according to the Light of Fancy, and not of Nature ; though to them their Light seem clear enough, yet can they fee nothing by it but what is phantaftical, and myftically or fophiftically written by the Envious, for the feducing of fuch fanciful Doters: therefore when once the Light of Nature is brought to their station, it discovers Cimmerian darkness there, where their imaginary Light only fhines, fuch as is Fox-fire and Glowworms

e

1-

2)

K

0

17

worms Tails, that fhine only in the dark ; This Light makes their Eyes fo tender, that the Lamp of Nature makes them fly. Moreover, whatever is written according to this Light, they cannot fee, nay they cannot endure the Light of the true Luna of the wife men : for any true Light discovers their Darkness, and yet their Darkness is uncapable of apprehending the Light. Now in that you went in among them without your Candle, it was a bold adventure, for had you loft your Thread, you could never have returned. Then I looked into my Tower, and did as I was directed ; and again I went to view those parts of Cimmerian Darkness once more, yet with my Candle in mine hand, and my Thread at my Girdle ; when I came the fecond time, at the fight of this Light all fled, so that I could not meet with any, but I entered into feveral turnings which I faw, and found in them feveral works curioufly erected, in which I might guess they aimed at nothing less than the Philosophers Stone.

Sir G. Ripley's first Gate. 127.

With Sulphurs.

T Found one Furnace most curioufly L built, in which all degrees of heat imaginable, by the Art of man, might be kept with one fire ; in which was let a multitude of curious Glaffes, in which were feveral Matters, some digesting, others fubliming, others distilling, others calcining, and about the Glaffes and the Furnace was written this of Geber, Per. Deum Sulphur est omne illud illuminans quad eft supra terram. By this I knew, that Sulphur was the fubject on which was wrought; and indeed with fo great cunning, that I could not but admire the ingenuity of the men : and knowing that what a man prizeth, (though it be -a trifle) yet to spoil or destroy that would be an injury, I meddled not with any Glass, (for indeed there were Labourers that fled not, because they knew nothing, but only wrought as they were directed :) and when I came, they could not perceive that I had any Candle in my hand, and wondred their Masters thould

should fly to from a phansie. Moreover I found that they could not fee any light from the Fox-fire and Glow-worms tails, which were there; but the place being dark, as being under ground, they wrought by Candles and Lamps, which yet could give their Masters no light, but they fought all the world over for thole thining fubjects : Yet I could notwithstanding both discern utter darknes, which the Rays of my Candle would not enlighten. Then faid I to the Workmen, What is this that is brought in here? Oh, faid they, they are Sol and Luna terrestrial, whereby our Masters can see clearly the Natures of all things in the world, and to make by their light the great Elixir; and though we can fee no light in them, or very little, it is because of our Ignorance in these things, therefore we use our Lamps to work by. Where are your Masters? faid I. They ran away; faid they, because when your came they faid you were a Devil, and brought an ominous light with you, and if they did but once see that with a full view, their Works would all vanish; they

ł

"Hen faid the, Befides that they work not on the true Matter, they work not in a right way, which are two most desperate errors; for our work is to make a substance fluid, penetrating and entring, that may have ingress into imperfect Metals : for which cause we do preferve humidity, without which our Stone cannot be penetrative. So then inflead of purifying the crude, and ripening what is raw by these Calcinations, the tender Soul is put to flight, and the crudities are the more ftrongly, vitrified, blo that all hope of fruit is, wholly by this means taken away: for take this for a rule, whatever either by violence of Fire, IS Op: 12 TEXA

or Corrofives, is turned into a dry Powder or Calx, it is wholly reprobate in our work: for though we Calcine, yet it is in fuch a Fire in which our moifture is not burnt, and in fuch a Veffel fo clofed that the Spirits are retained, and in a word fo fweet is our Regimen in reference to our Matter, that moifture is advanced, and is made more unctuous, and by confequent more ingreffive.

(tion, And for a fure ground of our true Calcina-Work wittily only kind with kind, For kind unto kind hath appetitive inclination.

B^Ut all this is not enough to declare our Calcination, for Operation follows Preparation, and he that doth not before he begin to work, prepare his Matters, and fet true Agent and Patient together, it is not his Regimen that can or will produce any thing. Therefore first you must know, that we joyn kind with kind in our work, for Nature is mended and retained with its own Nature : for this cause is our King wedded to the Water-

.]¢

J'ti W Si

Sir G. Ripley's first Gate. 133 Water-bearers Daughter, of which Water-bearer I told you that his Body, his Pitcher, and the Water in it, are all one; and his Daughter was the Queen which arole out of the water, in which was feen a Lamp burning: Wonder not at it. that a Queen (hould fpring out of a Water-bearers loins, for the King is also his Son, and he is greater then both. For know, that in this place there is nothing fo hard to get as Water, which cannot be brought but by him that hath the Keys of the whole Kingdom. Take this then for a great fecret, our Water-bearer is Father to the King and Queen: the King being at perfect years, is at his own difpofe, and enjoys more Riches then his Father; but his Father hath the Key of a Closet, in which is Riches enough for all in the Kingdom, to make every Subject as rich as the King; but the dispose of this wealth the King only is to have, yet can he not have it in his possession till he marry his Sifter, which is in the water of the Pitcher invisible. This his Silter, is also his Mother and his Father, for it is one with the Water-bearer, the Water 4

er-

Water and the Pitcher, as is faid. By reafon of his Confanguinity the King embraceth his Sifter very defiroufly, and fhe by his embraces appears as a Queen, and then the Water-bearer, and his Water and Pitcher vanifh, and the King and Queen remain alone : at length both King and Queen are drowned, after the immoderate ufe of Venery, and violent fweating, weeping and piffing, which fweat, tears and urine, do make one Sea, in which fwim two Fifhes without flefh and bones, which after refolve and make one Broth, which is called Water permanent.

Who knoweth not this in knowledge is blind, He may forth wander as mist in the wind, Wotting never with profit where to light, Because he understands not our words aright.

Fu

Bi F. 7

Thus though I have fomewhat Metaphorically deciphered our true principles, yet fo plainly as that you may with diligence understand the meaning; and unless you know this, you will proceed blind-fold in your work, not knowing Sir G. Ripley's first Gate. 135 ing the caules of things, to that every puff of Sophifters will tofs you, like as a Feather is toffed in the Air with a blaft of wind: for our Books are full of obfcurity, and Philosophers write horrid Metaphors and Riddles to them who are not upon a fure bottom, which like to a running Stream will carry them down head-long into despair and errors, which they can never escape till they to far understand our writings, as to difcern the fubject Matter of our fecrets, which being known the reft is not fo hard.

Joyn kind therefore with kind, as good reafon is,

For every Burgeon answers his own feed, Man getteth Man, a Beast a Beast I wis, Further to treat of this it is no need. But understand this point if you will speed, Fach thing is first Calcin'd in his own kind, This well conceiv'd, fruit therein shalt thou find.

S Tep therefore not one ftep further till you have learned this Leffon, namely, to wed Confanguinity with Confanguinity,

136

guinity, and confider well what it is you defire to produce, and according to that let be your intention. Take the last thing in your Intention, for the first thing in your Principles : this is according to Nature, and it is the true ground of all Generation, for out of kind nothing doth engender; a Man begetteth a Man, and not a Lion, nor doth a Lion beget a Sheep, a Role doth not produce a Thorn, nor a Nettle a Gilliflower; and fo, if need were, I could particularly demonstrate it throughout all Vegetable, Animal, and Mineral Bodies, but it is fo plain a thing that I need fay no more, but leave it with you as the Foundationftone on which you shall build whatever you intend. Attempt nothing out of its own nature and kind, left you reap a fancy instead of truth. Whatever you intend to increase by way of Multiplication, attempt it only in its own kind; and so in this work especially, in which Calcination is the mingling of Seminal influence, which must be done in the fame way of homogeneity. If you apprehend this in its cause aright, and know how

Sir G. Ripley's first Gate. 137 how to apply this doctrine in your operation as you ought, in this you will find great benefit, and a door hereby opened to the discovery of greater Mysteries.

And we make Calx unstruous, black, white, and red.

nd;

the aplow A Nd now the opportunity of this difcourfe, leads me to handle our Magical Calxes, know that we do Calcine three times in our work, of which the general principle is, that our Calxes are not combust powders, but unctuous, for in them we innoble the Sulphurs, which are the Basis of Radical Humidity, which are the Basis of Radical Humidity, which Raymund calls Oyls and Unguents: So then our Calxes are one in kind, and do only differ in colour and maturity. Our first is black of the blackest, and is called Saturn; our second white of the whitest, and is called Luna; our third is red of the reddest, and is called Sol.

Of

Of three degrees or our Bafe be perfite.

THefe Calxes are the periods of 60 many Circulations, and have fo many degrees allowed to each of them; our first Circulation confounds the Elements, our fecond renews the Air, and the third exalts the Fire, and then is our Stone perfect.

Flexible as Wax, else stand they in no stead,

O Ur Calxes thus graduated, are diftinguifhable from all the Calxes in the world; firft, in that they are done without any laying on of hands: fecondly, from their exquisite subtility of parts, (for they are finer then Atoms of the Sun) joyned with an eminent Humidity, by reason of which, to the astonishment of the beholders, they flow like unto melted Wax; the first in the Glass by continuance of heat, and so the second as not being come to their period of perfection, and the second and third upon a plate of hot Metal, or on a melted Metal, or on Mercury

m

PI

mo

tio

ab di ab

ind

in

tiac

Sir GIRipley's first Gate. 135 Mercury heated to long till it is ready to fly.

By right long process, as Philosophers do write,

A year we take or more for our respite : For in less space our Calxes will not be made, Able to type with Tinsture that will not fade.

WHich last Calxes, as they are the period of Arts skill, and Natures power in this thing, fo they are a confiderable time in perfecting; the former in five months, viz. the white, and the red in nine months and a half, which is the true time, and a month we allow for the preparing of our Materials, and three months for Fermentations and Imbibitions, fo that our whole Operation is above a year. For indeed it is not an ordinary thing that we expect, but a Fireabiding Tincture, which is unfading and incorruptible, which cannot be expected in a fhort time; yet verily the Industry of the Work-man may forward, or fet back his Work, a month, two, or three, accor-

Ŋ

el-

ti-

101

on,

on hry

according to his more exquifitely preparing of his Matters, and governing of his Fire, whole exact Regimen is for speed, or retarding of the Work, almost all in all.

And for thy proportion thou must beware, For therein mayst thou be beguild, Therefore thy Work that thou not mar.

mix

grin

Mari

A Fter the knowledge of the true mate-A rial Subject, and its Preparation, the next main thing to be understood is the mystery of Proportion, which is a secret of no light concernment, for many erre therein. Thou shalt therefore understand, that our Proportion is two-fold, Internal and External; the Internal pondur is a Labyrinth in which all erre who know our Subject as many do, but not its Proportion. He who would effect any thing, must principally learn this which is set down in Golden words, in Bernard Trevisan his Treatise of the Chymical Miracle : The Sulphur, faith he, which is in the Mercury, and predominates not, is the Fire alone which governs the whole Work ; and Sir G. Ripley's first Gate. 141 and he therefore that in these things would be a skilful Artist, let him know how much Fire is beyond other Elements in subtility, and what a proportion of it will overcome all the rest. These Golden words, worthy to be ingraven in Marble, are the true foundation of our pondus.

With Mercury as much then so subtil'd, One of the Sun, two of the Moon, Till all together like pap be done.

¢

ţa

0

tŝ

17

ch

rd.

1-11

he

ki

RUt there is an External proportion, which is as neceffary as the other, or elfe the Work will either for lack, or excels of moilture, be destroyed; and that is thus : Take thy Body which without any equivocation is most pure Gold, let it be exquisitely purged, then filed or laminated, or calcined with Mercury, as is vulgarly known; of this take one part, and of our Water (which is without equivocation Argent-vive animated, which then we call our Luna) two parts, mix them together in an Amalgama, and grind them in a Mortar of Glass, or on a Marble, till they become very foft, and all

all the grettiness of the Body be subtilized with the *Mercury*, that they may seem to be one pap or paste, which we call Inceration.

Then make the Mercury four to the Sun, Two to the Moon as it should be.

NOw pluck up your attention, for my fpeech will be difficult. When your Body to your Mercury in outward proportion is one to two, then must your Mercury in its inward proportion be just opposite; that is, four to two, elfe you shall never make Harmony that is good Mulick; for do not think it is all one; with one and the fame proportioned Mercury, to put either one of the Body to two of the Water, or one to three, or two to three, or three to four ; no verily, till you come to this, to measure your Lamp clibanically to your Furnace, you are yet in the dark for Practice, though you may be true in Theory. I almost tremble to fpeak of this point, for it is the very wilde of all those who fludy this Art, and cannot come to the end of their

01

ter

Tet

it

is

Sir G. Ripley's first Gate. 143 their defires for want of true information in this particular. Know then, that when thy Mercury is to Sol in external pondus two to one, it must be as I said in respect of its own internal qualities, four to the Sun to two of the Moon; therefore, saith Artephius, that our Water is of kin to the Sun and to the Moon, but more to the Sun then to the Moon : Note this well, that is four to two, as Ripley hath it. This is indeed a great fecret, which hath befooled many.

ľ

Ò

e,

ly

10

T,

OU

121

noit

It IS

1dr

OI

Now know that our Eagles duly prepared are accommodated to the Sun from three to ten, fo that four to the Sun will be juft feven; and thy Mercury thus proportioned, let it be two of the Moon to one of its Body. Know alfo, that our Water is not called the Moon, but in, or in reference to conjunction, and fo let the Moon be two. In reference to its one Conflitution, it is called Mercury, (for fo it ought to be in that form and flux) and fo it ought to be four to the Sun, that is feven Eagles, which are to the Sun not before three, to which adding four, you make feven.

K

And

And thus thy Work must be begun, In figure of the Trinity, Three of the Body, and of the Spirit three; And for the unity of the substance spiritual, One more then of the substance corporal.

A Nd thus thy Work is brought to the true Touch-stone, and that is Trinity inUnity; for in this pondus of your Mercury you have a potential Body, which is one part of three of the Mercury, which may by Art be made appear. This potential Body is to be reckoned to your actual Body, and that makes with it two, and so in potentia you have two of the Body to one of the Spirit, which is three to three, and one to one. And this potential Body is at first spiritual and volatile, (in manifesto) for unity lake, without which could be no unity. Thus then a potential Body, but an actual Spirit, is joyned with an actual Body, by which means the actual Body, when it is actually diffolved and made no Body, but a Spirit or Spiritual Body, then this potential Spiritual Body (which was in the Water before)

th

11

Ve

the

Sir G. Ripley's first Gate. 145 before) receives this potentialized Body; and both unite and congeal together, and is endowed with a double nature and virtue, that is, Spiritual and Corporal, Heavenly and Earthly. And thus is made an union, of which the proportion of the Water in its first preparation, and its due mixing with its Body, was the moving cause, really though hiddenly enforcing the Compound by the neceffity of its end, which it could not have done had it not been so proportioned.

By Raymunds Repertory this is true Proportion, there who list to look; The fame my Doctor to me aid shew.

0

at a

is

ch

pi-

ter te) T His is the true meaning of our proportions. both according to the myftery of Internal and External pondus; this is that which Authors have fo much concealed, both Raymund, Arnold, Allert, and all who ever have wrote of it: I have broke the Ice first in plain discovering the mystery.

Yet for all this, you stand in need either of a Master, or of more then ordi-

K 2

nary

nary pains, accompanied with the bleffing of God, elle never look to find out this myftery, which though by me revealed more plainly then any, yet it will and muft remain fecret even till the fulnels of time.

Put three of the Spirit Bacon took To one of the Eody: For which I awoke Many a night ere I it wist. And both be true, take which you list.

THere is another External proportion, which is three of the Spirit to one of the Body, according to the working of Noble Bason, and many others; which though it feem little to differ from the former, vet there is a wide difference : I know them both, but shall not set down the grounds of the other; if you underfrand the former, the rule of it may guide you in the latter; for there is an infallible rule of proportion, how the External and luternal ought to concur, to make a Revet Harmony: only let me this affure you out of Norton, That if thy Body have plenty of drink, Then must thou wake when

01

10

CO

To

Of

Bo

Kil

Ma. This

Sir G. Ripley's first Gate. 147 when thou defir'st to wink; it will cost thee more affiduity of boiling for to dry up three parts, then two parts of Water; and there must be necessarily a diversity of Internal pondus, for the Water being of one and the fame Internal heat, and the External fire being the fame, the difference of decoction between two parts and three will be half in half almost until blackness, though after blackness there is one and the fame time to both. Yet either of these proportions are true, only you must be sure to qualifie your Mercury in heat, and your Regimen of your Furnace accordingly as you work with one or other of these proportions, or else your first token of the Crows head will come wonderful flowly.

If the Water alfo be equal in proportion To the Earth with heat in due measure, Of them will spring a new Burgcon, Both white and red in a Tincfure pure, Which in the Fire shall ever endure. Kill thou the quick, the dead revive; Make Trinity Unity without any strive. This is the surest and best proportion, K 3

dy

ake

hen

For

148 For there is least of the part piritual; The better therefore fall be folution, Then if thou didst it with Water (mall, Thine Earth over-glutting which loseth all. Take beed therefore to Potters Loam, And make thou never too neft thy Womb. That Loam behold how it temper'd is. The mean also by which it is Calcinate, And ever in mind look thou bear this, That never thine Earth with Water be suffocate.

A Lfo if your Water have its proportion A qualified accordingly, you may temper it with your Earth almost in an equal quality, that is, two to three, or three to four; but be fure then of your due government of external Fire, and a just fize of your Veffel, and fo you may expect from this mixture Conception and Generation : for in this pondus you shall find the death of the Spirit, and the quickning of the Body, and the exalting of your Tincture first into white, and after that into red, which will have ingress into Bodies, and tyne them permanently and radically. Though the Tincture is largeft

th

W

qui

Sir G. Ripley's first Gate. 149 largest where the Water is most, but the work is speediest where the Water is least, the Fire is also less hazardable; but your true proportion of your Mercury for such a pondus is hard to be found, and thou wilt not eafily find it unless thou be very skilful; the middle proportion is lefs difficult, that of three to one is worfe, for a Tyro, because he may very eafily have his time made tedious by it. The last would be better for such a one, if it were not fo hard to apprehend, for the Body would foon be made no Body, and the Spirit mortified, and fo Union would follow in a short time, in comparison to other proportions. So then if thou knowest how to prepare thy Mercury aright for its Internal proportion, the leffer thou putteft of the Spirit, the better and quicker shall be thy Calcination and Diffolution; and the more thou giveft of the Water, the longer thou shalt be in attaining the maftery : but if thou glut thy Earth with Water, thou wilt fo fuffocate the active virtue, that thy moisture will not be dried up; at least it would require so tedious a decoction, that thou K4 wouldeft

0

-

e-

×.

of

10.

rly

: 1S

reft

wouldest never see the effect. But the mediocrity is for thee the beft, at least at first; be not too covetous, nor too prodigal, for over-driness and over-moisture are both enemies to Generation, and make a barren Womb. If thou be'st witty to apprehend therefore, I shall shew you the certain way of External proportion; for know, that as the Water is qualified internally, fo doth it act externally, and if thou canst apprehend the sympathy that is between the inward quality, and the outward effect, thou mayft eafily difcern by what is apparent to fight, that which is hiddenly contained. Then for your true information take this rule : Let your Body be very well subtilized, and very pure, (which is a great matter, at the least 24 Carrats) mix this at first with twice as much of its Water, and grind it either on a clean Glass, or Marble Mortar; grind it thorowly, as Painters use to grind their Colours, and make not a light matter of this, for lack of one half hour or hours pains in thy Amalgamation, thou mayft fet thy work backward 20 or 30 days; for the more fubtlely

ha

it

th

Ir, the

no

Set

ber

Sir G. Ripley's first Gate. 151 fubtlely the Amalgama is mixed, the more eafily and speedily it resolves into Mercury, and is wrought upon, and the figns appear. When thou haft foundly and well ground it, and washed it very clean, and dried it very thorowly, fo that there be not the least moisture in it, observe the temper; if it be plyable like to Paste, yet fo as when you incline it this way or. that, you fee no Water run to the inclining fide, which you may eafily difcern, it is a good & fure temper; but if it be fo hard and dry, that it will not fpread eafily, it lacks moisture; or if that Hydropical water run as it were within a skin, to the declining fide of your Amalgama, add more of your Body to it, till you fee that fign no more; and grind it thorowly, as is faid, and rather chufe to lean to the other hand, then to this for there is nothing more irkfome to an Artift in his Scholarship, then to wait for his figns 20.11.12 beyond the time.

1.

ie.

Dry up thy moisture with heat most temperate. Help Difolution with moisture of the Moon, And Congelation with the Sun, then hast thou done.

When thou haft done this, then be fure to decoct it in a very gentle Fire till it be dry, not by exhaling the Water, but by coagulating it with the Body, in which thy main care muft be, that thy Veffel be clofe, and thy Fire gentle : Now the way to diffinguish a gentle from a violent Fire, is a thing deeply concealed by the envious, I shall preferibe fome few rules.

10

ti

de

of

ma

1. Know that it is the internal Fire of the Sulphur of thy Water, which doth perform the whole work.

2. That the external Fire is but an outward circumstance, which yet is fo absolutely necessary, that nothing can be effected without it.

3. The Regimen of the Fire is one Linear decoction, from the beginning to the end of the Work, boiling the thick, and fubSir G. Ripley's first Gate. 153 fubliming the thin, and so diffevering both (snaviter & cum ingenio) according to old Hermes.

4. All our Mastery confists in Vapour, which cannot be done without Sublimation and Distillation; for if our Spirit ascended not in a living form, it would all ascend and hang; but ascending quick, it returns again and moistens the Body.

e

of

th

an

10

be

j.

the

nd 165. Our Diftillation or Circulation, is not without a conftant motion of Separation; for as the fubtle is feparated from the groß by Sublimation, fo the thick of that which is below is fevered from the thin, which is by continual boiling and decocting, without a moments intermiffion: Therefore, faith Hermes, thou fhalt fever the fubtle from the groß, and the thick from the thin.

6. Our tender Spirit learns every day more and more to fuffer Fire; and therefore, faith Arnold, boil it with a Fire daily increasing: yet is it but one degree of Fire, and that is boiling, till the Womans Empire is vanquished; and then there is another degree, and that is roa sting,

ing, which hath two periods, Fixation and Calcination: therefore fay Philosophers in the beginning, *Coque*, that is, Boil, for as much as the Stone is moift; and at the end they fay, Affa, that is, Roaft, for then the Stone is dry.

7. The periods of the ftrength of the Fire are in this time many : every day if thou canft, augment a little, that it may increase intensibly, and you will find the effect the more fweetly and speedily.

8. The Philosophers in their description of the Fire, and its degrees, did more observe their matter and its capacity, then the Fire it felf.

9. They chiefly liken their Work to Man's Generation, and fo they call their Compound, Man: therefore faith *Ripley*, remember Man is the most Noble Creature.

10. This is the true meaning of Arnold's four degrees of Fire, Primus formetur ut fenfus ei dominetur; that is, the Stone being compared to Man, and its first moist Regimen to a Bath; the first degree makes it sweat gently, as a Bath to a Man, which is less hot then he can , fuffer,

Sir G. Ripley's first Gate. 155 suffer, doth caule a gentle sweat. Senfibus aquato gaudet natura secundo, is the fecond degree, in which sweat is exceedingly cauled, as a Bath which is as hot as a man can poffibly fuffer, caufes a most violent sweat. Tertius excedit & cum tolerantia lædit, is the third degree, which caufeth bubbling and fwelling, and anfwers to that heat which will blifter a mans hand; for our Compound in this heat rifeth in blifters, which fall and rife continually. Testrustor sensus gaudet procedere quartus, is the fourth heat of Congelation, which takes away fense, that is, quickness, and brings in ficcity, just as the cauterizing heat fears the flefh, and drys the moisture. Thus hiddenly did that fubtle Sophister veil his Fires.

n

)

1/3

ŀ

7.

20

由

n T, 11. Know that after 40 or 46 days continually boiling, the moifture will begin to wafte, and the Compound will begin to dry; which thou fhalt know, in that the boiling will begin to turn to a fwelling, like to Puff-pafte or Leaveneddough.

12. Know that in 36 days thou mayst have thy moisture begin to congeal, if thou

thou be exact in thy Fire, and Proportions both inward and outward.

13. Know that thy Glass must be thick, and very strong, and no less strongly closed, less it break with those winds which the first decostion will raise in thy Veffel.

14. Let its neck be fomewhat long, and fastned, that the motion which is in the Glass may not cause it (by reason of the length and thickness of the neck, and the Sublimation that is still in it, in drops which make it heavy) to sway the little Body one way or other; for if it incline, the Matter will be apt to grow to the inclining side, which should be avoided.

t

tr

qu

VI

th

01

me

Mec

15. Let the neck be confiderably cooler then the other part, that thy Vapours may condenfe in it, which elfe will burft the Glafs violently; fo mayft thou give thy Fire more ftrong then otherwife, and let thy neft be guarded from unneceffary heats and colds, which therefore would have holes at the top of the Cover, which may flut over every Glafs, and let out a part of the neck, which would Sir G. Ripley's first Gate. 157 would be very advantageous both for the fastning of the Glass, and condensing of Vapours.

16. This boiling will begin in the first three days, and if you be a good Work-man, in the first 24 hours; and from its first ebullition your time is to be reckoned.

17. When you fee the Water thicken in its boiling, there is lefs danger of the Fire.

18. If your Fire go out, your Stone dies.

19. Every intermission of your Fire, is a wasting both of its strength and virtue; and besides the most tedious protraction of time, it makes the Stone subject to many Sicknesses, which would require a most subtle Philosopher to amend, and it lays your Stone in danger of having a return of the Crows Pullets to their nest, after they are fled, which is an ominous sign.

20. Your Gold is not totally lolt before blackness perfect; yet it may be for metamorphosed, as to puzzle the best Mechanick to reduce it, and then it is never

never so full of Spirit as it was before.

21. Yet fome of it will be loft in a fhort decoction, and most of it in thirty days. In a Fire then governed according to these Rules, dry up thy moisture: and that thou mayst dry up the moisture of thy Water, thou must diffolve the Compages of thy Body, so then thy Water diffolves thy Body, and thy diffolved Body re-congeals it felf by a further decoction, and with it felf congeals the Water, which in diffolution was so united as to make one with it.

Four Natures into a fifth fo shalt thou turn, Which is a Nature most perfect and temperate.

W

tic

fer

0

Ma

Whe

T Hus shalt thou turn thy four qualities in which were repugnancy, into a fifth which is temperate; that is, thou shalt in this driness of Calcination, reconcile the Mercury with its qualities of cold and moisture, to Sulphur with its qualities of heat and driness, so shall thy Elements remain at the bottom, and thy Exhalations shall cease, and the moisture being Sir G. Ripley's first Gate. 159 being daily terminated into driness, by the ferment of the Body, as Milk by Runnit is terminated into Cheese, thou shalt have a middle product, partaking of the complexion of either Parent.

But hard it is with thy bare foot to spurn Against a bar of Iron, or Steel new acuate; For many so do which be infatuate, When they such high things take in hand, Which they in no wise understand.

THus we have plainly and faithfully done our duty, and by a Line as it were have diffevered the Truth from Falshood; yet we know, that in the World our Writings shall prove as a curious edged Knife; to fome they shall carve out Dainties, and to others it shall ferve only to cut their Fingers : yet we are not to be blamed; for we do ferioully profess to any that shall attempt this Work, that he attempts the highest piece of Philosophy that is in Nature; and though we write in English, yet our Matter will be as hard as Greek to fome, who will think they understand us well, when

when they micooffrue our meaning most perverlly: For is it imaginable that they who are fools in Nature, should be wife in our Books, which are testimonics unto Nature?

In Fggs, in Vitriol, or in Blood, What Riches ween they there to find ? If they Philosophy understood, They would not be in working so blind, Gold and Silver to seek out of its kind : For like as Fire of burning principle is, So the principle of gilding is Gold I wis. If thou therefore intend for to make Gold or Silver by craft of our Philosophy, Thereto neither Fggs nor Blood thou take, But Gold aud Silver, which naturally Calcined wisely, and not manually, A new Generation will forth bring, Increasing its kind as doth every other thing.

Some I know will ferve my Book as they have ferved others, out of it they will read their own fantaftick proceffes, which I never dreamt of, nor yet are they in Nature; and whatever I write moft plainly, they will Allegorize, and fay it is true.

1.1.1.4

for c

Sir G.Ripley's first Gate. 163 Gold, to penetrate its own dimensions fo many times, to answer your fond defires. This which you attempt is to force Nature, and to create Sperms, both which are vain to undertake, and truly impoffible. Leave then this Sophistry, and imbrace true Light. To create Sperms is Gods alone property, and every thing hath its own Sperm, as it hath its own Form : there is nothing that hath a feminal virtue applicable to two things, every thing hath its own Seed, and according to its own Form. Gold therefore and Silver being thine intention, let the fame be thy subject to work upon; Gold is thy first Basis, for thy white must first come out of thy red, and when thy white Stone is perfect, then maylt thou use Luna yulgar. Now Gold must have its hidden Seed extracted, and that is done by Mercury in Calcination, for that operation is the Mineral Copulation, in which the Seeds are fent forth and mingled together, then shall the old Body die, and a new Body shall rife again, endowed with a multiplicative virtue, according to the nature of all things; for L 2 18

dy,

the

sot old,

it favours rankly of abfurdity and ignorance, to allow all things almost a multiplicative power, and to deny it to Gold, the most perfect of all sublunary things.

And if it true were that profit might be, In things which are not Metalline.

T But some will fay, How will you an-- fwer the Philosophers, who affirm that their Stone is in all things, though in fome things nearer, and in fome things at greater diltance, yet in all things according to the rule of (propinguius & remotius?) To fuch 1 answer, I grant and know that all things originally owe all their principle material unto Water, and their formal unto Light; and according to the congress of these two principles, through the command of the Architect, this Light doth illuminate the material Water in a fingular way, according to the Ideal fpecies which were before in the Archetype: So then the Matter refides in Water, the Informing in Light, and the determination of the Form, which is as I may fay the Form's formality, is in the will of the Creator,

mi

out

of

I

gr

ye

aI

one

But

Sir G. Ripley's first Gate. 165 Creator, first impressed or sealed in the word (fiat,) and ratified in his command (producat unumquodque juxta speciem Juam.) Now to apply this to our present purpole, in Water and Light all things agree, in the determination of Illumination they differ. This determinative sentence of the Almighty, fealed a great variety in the products of the Matter and Form, which are in themselves general, and being thus sealed, not any thing can pass from its kind to mix with another kind, but it will cause a product partaking of either Parent, nor can mixture be made but in the fame genus or species ; as an Apple may be graffed on a Crabtree, a Man may (though abominably) mix with a Beast, (licentia naturali) but out of genus or species nothing can mix. There are also many particular exceptions of things in one genus, for many Trees I know which the Art of man cannot ingraff one in another, fo as to grow, will yet grow well ingraffed elsewhere; so a Dog and a Moule cannot mix, being one so disproportionable to another, But this by the by.

And under the temperate heat of the Sun, Thy Elements shall be incinerate soon, And then hast thou the Mastery won. Thank God thy Work was so begun : For then hast thou one token true, Which first in blackness to thee will shew.

T7Hen thou halt by thy first Waters Pontick virtue and firinefs, fo far diffolved thy Body as to fet at liberty its internal Sulphur, then thy Operations will be speedy; for the Sulphur of the Water, together with the natural Sulphur of thy Gold, by mixture will make an unnatural Fire, which will then burn like to the Fire of Hell, first making a total end of that diffolution which was but in part made by the Water, and after that drying up and congealing its own moilture, and the moisture of the Water, uniting the Sulphur of the Sun and the Sulphur of the Water, and the Mercury of the Sun and and and the second

and the Mercury of the Water, and the united Sulphur prevailing over the united Humidity, rotting it into powder as small as Atoms, black of the blackeft black, thou shalt then, see a total mixture of Seeds, and death of thy Compound. This rotting will begin about the 42, 46 or 50th day; and the figns of it are, the Fumes will not ascend, but the Matter will boil at the bottom of the Glass, like to melted Pitch, boiling and bubbling, fwelling and puffing in a black colour, every day blacker and blacker, fhewing changable rotting colours in its boiling. This will continue till it be fo thick, that it boil not, but grow hard and fwell; yet it will vary often, and appear fometimes as though dry, and fometimes a little moifture will appear, with fresh bubbling, but no Fumes. And this will last about 46 days, no Fumes rifing at all, fo that about the 84th or 90th day, after thy Matters begin to be boiled in a continual decoction, Putrefaction will be compleat, and then Sublimation or Circulation will begin again, which in 46 or 50 days will end in a white Dove.

aimo

T His token then is called the Crow, the Crow's Head, and the Crow's Bill, for it is a fining blacknefs, like unto Printers Ink, or a folid Coal new broken, or the most black and compacted broken Pitch.

Others name it the Ashes of Hermes Tree, for it is Ashes out of which grows Sir G. Ripley's first Gate. 177 a Tree afterwards, beautiful and glorious with Sprigs and Branches, and changable colours.

And indeed this liberty the Philofophers have taken, to call it what they lift: they call it their Toad which crawleth on the ground, and feedeth upon the flime of the Earth; becaufe before it is quite black, it may refemble the colours of a Toad, and its likenefs, puffing and fwelling, and rugged with bunches and blifters, and knobs.

t

10

11-

ell

es

WS

2

Others call it a Spirit killed with its own deadly poifon, that is, Mercury diffolving Gold, in which diffolved Body (which then feems a Spirit) there is a hidden ferment, which may recongeal the fame: this fermental virtue it is that doth coagulate or thicken the Water, that to the wonder of the Beholders what before was thinner and thinner, doth after 40 days thicken, till it come to a duft or powder like to impalpable Atoms.

But I shall not infift upon these denominations, there being so many given to it by the Envious, that there is nothing almost in the World that is black, or may

M 2

be

be made black by the Fire, but they have named it by it. Alfo whatever is filthy or fæculent, or unfavoury either to tafte or fmell, they have Allufively called their Stone by, in reference to its first putridnels or corruption. So likewile when by continuance of decoction the colour changeth to white, they then call it their Swan, their Dove, their white Stone of Paradife, their white Gold, their Alablafter, their white Smoak, and in a word whatever is white they do call it by. And fo the Red they name their Vermilion, their red Lead, their Poppy of the Rock, their Tyre, their Bafilisk, their red Lion, and in fum it borrows the names of all red things.

Now thou art entred the first five Gates of the Philosophers Castle; for do not believe but that Calcination is verily Putrefaction, and is done by Diffolution, Separation and Conjunction, as if thou hast attended this difcourse thou mays the easily conceive: only here is the Sophism, after this total Calcination, there is a relenting again; for as I faid before, our Operation is but turning as it were of a Wheel,

Sir G. Ripley's first Gate. 179 Wheel, which runs one half of its circulation directly backwards to its first progress. Thou sublimest so long, till the Body is made as volatile as it may be, this is the activity of the Spirit; then thou congealeft to long, till all appear like Atoms, and then is thy bodily virtue active, and thy Spirit paffive; then thy Spirit begins to be active again, and thy Compound which was apparently fixed, relents again and distils as before, till it come to its height again of volatility, which is again a Separation; then is celebrated again a Conjunction Tetraptive, and from that time all ascends and defcends together, and there is fuch an union, that there doth not then (as at first) exhale a quick Fume, and descend upon the bodily Moles; but all ascends like to a glorious Tree with branches, and is not fublimed to the top, but sprouts up like the tender Froft in a fair morning, which falls and rifes till all become a Powder impalpable. So then after Calcination is again a Solution, and that divides between Azoth and Laton, and a distilling Separation in which Azoth wash-M 3 eth

eth Laton; and after that a Conjunction, not of the four Elemental qualities only. which was in the first Conjunction, but of the Elements themselves, the Body, Soul and Spirit; and then is made another Calcination into a white Calx, which by continual decoction relents again, and is made volatile again : for our Wheel goes round, and when it is come thither whence it set forth, it begins again. Thus is made a third Solution, Sublimation and Calcination into a red Elixir, which is the Sabboth of Nature and Art : at which being arrived, there is no farther progress without a new Marriage, either by Ferment or otherwife, according to the rule of Nature and Art: fo that indeed all our work is three Rotations, and every Rotation hath three Members, Solution, Sublimation, and Calcination. The first Solution, is called Inceration, and Reduction or Liquefaction, the fecond properly Solution, the third Inceration. The first Sublimation is called Distillation, Ascension and Descension, the fecond Separation and Ablution, the third Exaltation and Sublimation. The firft

Sir G.Ripley's first Gate. 181 First Calcination is called Calcination and Conjunction Triptative, Putrefaction, dec. The fecond Congelation, Albification and Fixation, the Third Illumination, Over only remember, thou in thy first Calcination attainest compleat Putrefaction, in the fecond the compleat white Elixin, and in the third the compleat Red. This I premise to undeceive thee, that thou mayst not think to have a Calcination first, a Diffolution next, a Separation thirdly, a Conjunction fourthly, a Putrefaction fifthly, &c. No verily, when thou first puttest thy Matters into the Veffel, in the first day of thy Operation; thou givest a Fire in which thy Compound boileth, swelleth, and puffeth vifibly, and drops run down in veins off from the Convex of thy Glass; for in this Mercury thy Gold will, beyond the nature of any other Mercury; flow in the Fire as if the whole was Mercury, and boyl visibly, which muft never cease, not a moment, for it brings imminent damage. In the first days of your boyling, which is accompanied with a constant ascending and return of Fumes, your Compound grows M 4

he

grows more and more liquid, now and then a skin appearing in the form of a diftinguishable, though not very observable, whiteness. At length a yellowish colour will appear, lefs at first, and more afterwards diftinguishable, both in the boyling Compound below, and in the Fumes above; and when thou feelt thy Glass as if it were all over gilded, where the Fumes alcend with a blewnefs, then know that thy Man and Wife do mix their Seeds, then shall an obscure greennels pals and continue a feason, then shall thy Fumes diminish, and at length be none at all, and the Compound Ihall boyl and swell in the bottom of the Glafs.

After that, the more you boyl, your Compound will be the more black, coming at laft to the temper of melted Pitch for colour and bubbling, which fhall rot with obfcure colours untill it come to the period of Putrefaction, which is a moft exquifitely fubtle, black, unctuous Powder, which about the 84th or 90th day in a good decoction will be compleat.

Sir G. Ripley's first Gate. 182

Take heed now, for I shall not make fuch another particular Systeme of the Work in all my Writings. When the fulnels of compleat Calcination is perfect, then will the parts begin to liquefie together again, and you then shall see Vapours begin to arife again, first like to a Smoak, which will after return in drops condensing on the Veffel fides, which believe me is a gallant fight; for in this Operation as blackness by little wears away, fuch colours will appear which thou canft not imagine, that thou wilt steal from Natures due to fatisfie thine eyes in the beholding of it, when thou shouldest sleep.

and thou shalt fee a Congelation, like to the sparkling twinkling eyes of Filhes, which moving unceffantly on the Fire, will glitter incomparably and wonderfully, and thickning more and more, it will sprout like the tender Frost in a most amiable lustre, and in 25 days shalt thou have it a most impalpable undiscernable Powder. Now thou needest no farther instruction, only this let me tell you, that the continuing your Glass in the Fire, and increasing it discreetly, this white will relent again, and change into a perfect green, and will again circulate and become perfect Azure, and at the length thicken, and in the end become (after a long Citrinity) in a moment a sparkling red pure impalpable Powder. Underftand this well, and you will not be amazed any longer with the distinction of our Operations, which is but Solution (which contains Separation or Sublimation, and Volatization) and Coagulation, which contains Conjunction, Calcination and Fixation; and all is but a fucceffive action and paffion of Gold the Body and his qualities, and Mercury the Soul and

Sir G. Ripley's first Gate.

and its qualities, between which intercedes a Spirit of Life, which carries them up and down like a Wheel, which turns till it returns thither whence it proceeded, and then begins again and turns fo long till it finds its reft, which is in the Fiery Cathedra, the red of the reddeft, the great Elixir commanding all Metals, and reducing them to the highest period of Nature, which is Gold it felf, having attained a plnfquam perfection, through the marvellous co-operation of Art and Nature.

185

Thus Gold is thy Bafe or Foundation, the Centre to which all thy Operations return, and in which they reft; for they are but Circulations in their own kind, and thefe Circulations are unceffantly carried along through the never-ceafing action of the Fire, which a little intermiffion would retard notably, an extinction of the heat would extinguifh irrecoverably. If any then fhould ask us, what our natural Operation of the Stone is; we would anfwer, a making of active Natures paffive, and paffive active, by continual decoction. We boyl continually,

ally, and when the Spirit is active there is a constant ascension and descension. and the Body is diffolved and made to fly like a Spirit; and when the Body is active, the Fumes by little and little ceafe. and the Compound remains below, boiling without fuming, thickning and then at length calcining: and this is without hands repeated three times, the Fire only being kept continually, and then a Sabboth of reft and perfection is attained : in the mean time divers colours come and go, which the dying Body and vegetative Soul do work and caufe. Truft me, Friend and Brother, thou never hadlt fuch a manuduct as this in thy life, the Reasons of my plainnels my little Latine Treatife doth clearly shew.

The Battle's fought, the Conquest won, The Lyon dead reviv'd; The Eagle's dead which did him slay, And both of sense depriv'd. The Showrs cease, the Dews which fell For six weeks, do not rise; The ugly Toad that did so swell, With swelling bursts and dies.

The

Sir G. Ripley's first Gate. 187 The Argent Field with Or is staind, With Violet intermix'd, The fable Black is not difdain d, Which shews the Spirits fix d. The Compound into Atoms turn'd, The Seeds together blended; The flying Soul to th' Earth return'd, The foaring Bird descended. The King and Queen contumulate, And joyn'd as one together; That which before was two, by Fate Is ty'd, which none can fever. The King begets the Queen with Child, Conjunstion doth allay Their fury who before were wild, Conception both doth flay. The King is Brother to his Wife, And the to him is Mother; One Father is to both, whofe life Depends upon each other. The one when dead, the other dyes, And both are laid in Grave ; The Coffin's one in which both lyes, Each doth the other fave. Iet each the other doth destroy, And yet both are amended ;

One

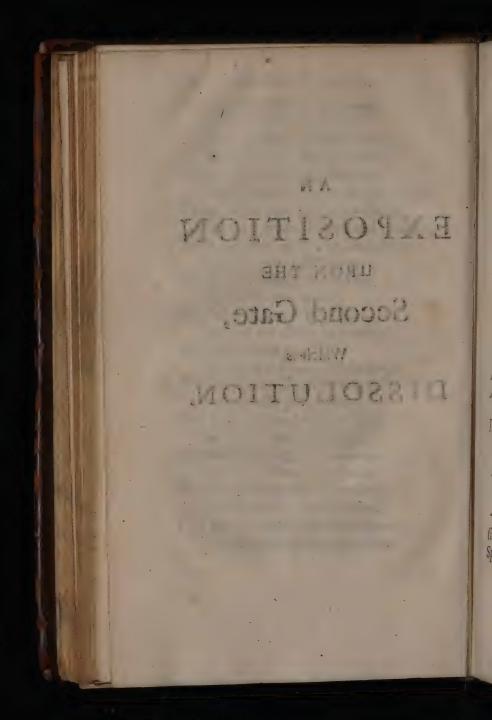

188 An Exposition, &c.

One without tother bath no joy, Both are of one descended. Twice fourty days do come and go, To which twice five are added, These do produce a perfect Crow, Whofe blackness chears hearts sadded. Twice fifteen more produce a Dove, Whofe wings are bright and tender; Twice ten more make the Soul above To need no Fire defender. For Soul and Body to combine, The Spirit interceding, Tincture to give of Silver fine, The Soul the Body in leading. Alfo such fixity to add, Against the Flames prevailing, Which may the Chymist make full glad, The Saphister still failing. Who feeks in fancies for to find Our Art fo much concealed, Not duly weighing in his mind That tis a Fountain fealed, Which one thing only can unlock ; This one thing learn to know, Left you the fame event should mock, That thing these Lines. do shew.

AN

E

AN EXPOSITION UPON THE Second Gate, Which is DISSOLUTION.

The Second Gate Opened, Which is DISSOLUTION.

191

Of Diffolution now will I fpeak a word or two, Which fheweth out what erft was hid from fight, And maketh intenuate things that were thick alfo, Py virtue of our first Menstrue clear and bright, In which our Bodies eclipfed been of light, And of their hard and dry compaction fubtilate, Into their own first Matter kindly retrogradate.

Aving run through the Chapter of Calcination, I now come to handle Diffolution, which as I faid before, is the first beginning of the Spirits activity, and it is the first half of N the

the Wheel which turns up the Spirit, and down the Body ; the fecond hath a contrary operation, for it makes the Body active, and Spirit paffive : fo then Calcination hides the profundity of the Body, which Solution discovereth. It is then nothing elfe but a boiling of hard and dry Bodies in our Mercury, in a convenient Fire, fo long till they be diffolved and made thin; then the same Fire makes them fly, and flying they condense and return in drops on the Body, and moisten it: This is Solution and Sublimation together, for the Water circulating upon the Body, doth foften it, and by often returning doth at length bring it to its own nature of moisture. In this Resolution, according to Artephius, the Sun loseth its colour and is darkned, and the Moon doth not give her light, for all things are turned into their confused Chaos, or first Matter, in which the Elements with their qualities are hurried together.

One ih Gender they be, and in Number two, Whofe Father is the Sun, and the Moon the Mother :

.

1

,

S

1

0

2

3

20

The mover is Mercury : Thefe and no more be Our Magnefia, our Adrop, and none other Things here be, but only Sifter and Brother : That is to mean, Agent and Patient, Sulphur and Mercury co-effential to our intent.

THe caufe of this is the Homogeneity of the Matter, wherein they agree in effence, together with the difference which is between them in Sex, they being in the Glass as Male and Female; and in ripenels of years one being more mature, and by confequent more active, (to wit, the Sun, who therefore is the Father) the other more crude (in comparison of the Sun) and so more passive, viz. the Moon, which therefore is the Mother of our Stone. This Mother is our Mercury (which for its eminent difference from any other Mercury, is called the Moon) with its internal true Sulphur, which is hidden under its Mercurial form, N_2 doth

doth first move; for at first our Body, which is Gold, is dead, and liveth not till it be quickned by our *Mercury*, then it lives: it behoveth thee then to put in thy Body and thy Water, and let them stand together, and add nothing to them. This Composition duly made we call our *Magnefia*, and our *Adrop*, and nothing entreth, neither Powder nor Liquor, fave only these two *species*, which *species* are the perfect Body and *Argent vive*.

I

t

1

01

tl

A

2

Thefe two fprung out of one Root, for as I told you, the Soul of thy animated *Mercury* is perfect true Gold, yet volatile, which by Art may be made to appear in a fixed form: fo then we joyn Confanguinity with Confanguinity, Brother with Sifter, and make them become together Man and Wife. Thefe two by continual Fire do act and re-act, the Woman first, and then the Man, feveral, which then are joyned and make one Hermaphrodite, acting one half of each Circulation as a Woman or Spirit, and the other half as a Man or Body.

For each of the two principles have a Sulphur and a Mercuriality; the Gold or Body Sir G. Ripley's fecond Gate. 195 Body hath its Sulphur external and apparent, the Mercury the Spirit hath it internally hidden, yet both these are co-effential each to other, and in that respect they are the only subjects in the World for our Art.

Between these two in quality contrarious, Ingendred is a mean most marvellous, Which is our Mercury and Menstrue un-Euous ;

Our fecret Sulphur working invisibly, More fierce then Fire burning the Body, Dissolving Metals into Water Mineral, Which Night for darkness in the North we do call.

•

).

C

19

10

)[

y

For with their Homogeneity, they have withall fuch a Contrariety in oppofite qualities, that they do no fooner feel the Fire, but they are ftirred up to Work, and boiling and circulating in a continual Ebullition or Vapour, they do mingle their homogeneal qualities together : by reafon of which there is a ftrange medium, of an unnatural Fire and a putrefying Bath ingendred, then the N 3 Sulphur

Sult hur or Fire of the Gold, which is the Fire of Nature, and the Sulphur of the Water, do embrace one another, and these two make an unnatural Fire, in which the Humidity appears, and the Sulphur being hidden to the eye, appears in its effects only to fight, and that is, it burns, destroys and conquers the Bodies, which common Fire never could do, making them to be no Bodies, but a Fume of Mineral Vapour; and in this Operation the Elements are confused, and make our Chaos which is void and dark, for here the Lights of the World are eclipfed, the Sun is darkned, and the Moon theweth not its light: which watrishness of the Compositions, for its abundance of moifture, and privation of light, we call Winter, and Night, and the North Latitude of our Stone.

in ve

Sir G. Ripley's Second Gate. 197

But yet I trow thou understandst not utterly, The very secret of Philosophers Dissolution, Therefore understand me, I counsel thee wittily,

For the truth I will tell thee without delufion, Our Solution is caufed of our Congelation; For Diffolution on the one fide corporal, Caufeth Congelation on the other fide spiritual.

ĉ

.

1

TTHen once thou haft the true maftery of our Diffolution, thou needeft take no care for Congelation, for governing it on with thy Fire, thou fhalt attain Coagulation without any laying on of hands. Therefore faith Ricardus, above all things it is wonderful, that in our work, Calcination, Diffolution, Sublimation, Putrefaction, Separation, Conjunction, Death and Purification, should be performed in one Veffel, and one linear decoction, without laying on of hands : for verily the Diffolution of the Body thickens the Spirit, as it is in Water in which Gum or fuch a thing is diffolved; for by how much the one is diffolved. N4

ved, the other is congealed : this proves the naturality of our Work, for as a grain of Corn is in the bowels of the Earth foftned with the moift Vapour, and fwelleth thereby, this Vapour is alfo terminated by the fermental odour of the Grain, and fo both grow up together into Stalks and Ears.

an

And we diffolve into Water which wetteth no hand; For when the Earth is integratly incinerate, Then is the Water congeal d: This underftand, For our Elements are fo together concatenate, That when thy Body from its first form is alterate, A new form is indued immediately, Since nothing being without all form is ntterly.

S^O we in our Work diffolve our Body, which is Gold, in its own Water, in which it is foftned as a Seed in its proper ground, and being foftned it relents into Water, not diaphanous, fuch as is the Waters of the Clouds, or of Fountains, but Sir G. Ripley's fecond Gate. 199 but Mineral, even Mercury which wetteth no hand, nor cleaves to any thing but that which is of its own fubftance and effence.

3

.

S

.

ſ

.

n

2

So that then in our Work, our two Principals work not according to their fingle dispositions, but as conjunct; the one, faith the Philosopher, dyeth not without its Brother : therefore when thou calcinest the Earth, thou dost in it and with it calcine the Water, and in this the Souls of both are tyed together, to the end that they may ferve the wife Philosophers. Therefore let all thy fludy be to unite Natures, which thou canft never do, unless thou separate first their Souls by Sublimation, and afterwards unite them in blackness, which a continual Circulation of thy Water upon the Earth will produce.

Now know, that when thou feeft thy Water and thy Body boil together, fo as to thicken one another, and to congeal one another, that then thy fcience is true, and then thy Body which thus thickens, is not the fame which thou putteft in, but a middle coagulate, a *terra Adamica*, a *Limus*

Limus and Chaos, for one form being taken away, a fecond neceffarily follows immediately; for as no Body can at any time have more than one form, fo can it never be void of all form.

And here a secret I will to thee disclose, Which is the ground of our secrets all, And it not known thou shalt but lose Thy labour and costs both great and small : Take heed therefore in error that thou not fall. The more thine Earth, and the less thy moisture be, The rather and better Solution shalt thou see.

A Nd here take notice by the way, that that is no total Diffolution which is before Calcination, but only partial, the Water refolves as much as it can of the Body, fo much that it doth fever between its Spirit and Body; but by reafon of its perfection and ftrong compaction, it finds a great deal of difficulty before a total Refolution, and therefore it putrefies what is most gross, and thus brings it to Atoms, which when it is once fubtilized beyond

Is

al

0

d

beyond the exigency of its own nature, it then is diffolved, and relents, and then Diffolution is made totally, viz. after Putrefaction. Then at length it becomes all like a glorious Argent vive, and this immediately before the Lunary Coagulation: Know then that our first loofing is into a viscous Powder, which is brought on by Incrudation, or rather Liquefaction ; for know that till after Putrefaction, our Stone and Compound is moift in the Fire, but hardens more and more by how much the colder it is, and softens more and more by how much hotter it is, and the heat flacking, the boiling will change into a seeming Vegetation, and the Fire going out, it is hard rather than foft, yet the mingling of the Natures is known by the colours, and drawing to Calcination. Therefore thy first Operation is to dry up thy fuperfluous watrish moilture, not evaporating it, but congealing it on the Body. Think not then, as some of the. envious Sophiltically write, that the more you put of your Water, the fooner you diffolve, and congeal the flower : No verily, your Calcination is but the medium of

of true Solution, which is (truft me) not total nor proper till after Putrefaction. I fhould never have told thee this Myftery, had not the love of my Neighbour compelled me. That opening of the Body which is before, is but an opening of its pores, which lets our Water in, and then after death and refurrection the *Mercury* of *Sol* is visible to the eye, which before was but diftinguistable by its effect.

Behold how Ice to Water doth relent, And fo it must, for Water it was before ; Right fo again our Water to Earth is went, And Water thereby congeal d for evermore : For after all Philosophers that ere were bore, Each Metal once was Water Mineral, Therefore with Water they turn to Water all.

SO then our Body hath moifture in it felf, but this moifture is fealed, as Water when frozen by the Cold. But when the pores of the Body are by our Water opened, and its central Fire fet at liberty, this internal Fire of Nature makes the Body to become no Body, but a very Spirit.

Sir G. Ripley's fecond Gate. 203

1

.

Y

Y

e

ty

2.9

It

a.

20

F,

y

In this fame Operation the Spirit is congealed, for the Body hath in it more virtue then its two Sociats, that is, than the Soul and Spirit. This is the action and re-action of our Body and its Water, for our Body is in its occulto Mercury, and our Mercury is in its occulto Sol; therefore they embrace each other, becaule of the nearness of their Natures, and so the Body hath its profundity discovered, and the Water its altitude, and both together are glorified in one Spiritual Body together, according to Noble Hermes, Vis ejus est integra si versa suerit in terram. But thou canst never have this excellent fixity, till the fixed have attained its volatility.

In which Water of kind occasionate, Of qualities been repugnance and diversity, Things into things must therefore be Rotate, Until that Trinity be brought to perfect Unity.

T His Water into which our Bodies are first liquefied, is not properly Water, but (modo quodam) as we may fay in the

the Fire. During the predomination of the Woman, all appears in a moift posture, and so will do most part of the first 50 days; yet this is a groß moisture, and by confequence the more fit for Putrefaction: in which groß Humidity all the Elements are in a confusion, not the Elements of the great World, but our Mineral Elements; thou must therefore work by a continual boiling, in which thy Compound will appear like unto the Itormy Sea in a Tempest, raging and fwelling, waves and bubbles rifing one in the neck of another inceffantly. The Vapour of this Bath being imprisoned, condenfeth and returns every moment, until there be an union made of all the Elements, in a terra Adamica, or Limus. Then will the Body, Soul and Spirit remain below in the bottom of the Veffel. which is as a Tomb, in which they dye and rot, and are putrified.

tl fi

works, and it is barren of it felf: to make it fruitful thou must bring on the Winter thowrs, which is the North Latitude, and by these the Earth will be made mellow, and the Seeds will rot ; which Seeds are Sol terrestrial, in whose belly is a hidden Luna. These Lights will in this Operation be darkned, and by little and little a horrible Night will over-shadow the Earth and Heaven, a blackness like unto Pitch: this blackness and Ecliplation will continue until the end of thy first three months, perhaps 100 days, perhaps 120, yea sometimes 130 days, as it may fall out; think not this time long, for it must be that thy Matters must be purified, before they can or fhall be glorified.

Then take thy courfe up to the East anon, By colours rifing variable in manifold wife, To the Fast therefore thine alcending devise, For there the Sun with day-light doth uprise In Summer, and there differt thee with delight.

T Hen shalt thou see thy Exhalations to return again, and by the continuance

Sir G. Ripley's fecond Gate. 211 ance of them on thy Body, light shall begin to appear, which is our Spring and East season, in which as the riling Sun scatters the darkness with multitude of previous colours, especially in a misty morning; fo is it with our Work, fuch admirable colours will appear, as never, were seen by the eye of man in so little a room before. Then rejoyce, for now our King hath triumphed over the miferies of death, and behold him returning in the East with the Clouds in power and great glory. Now the Night is overgone, and the Morning breaks ; the Winter is past, and the Spring comes on pleafantly, with fweet showrs of April, hastning the most beautiful Flowers of May. Now as the Winter is a fad time, being cold and wet, frofty and flabbery, the Countries of Pleasure being dirty to the Horses belly, but the Spring returns the year, and pleafure with its fweet feafon: so in our Work, thy first Operations before blackness seem tedious, but after blackness far more tedious, for thou wilt think there will never be an end of it; fo variety of colours brings delight in its 0 3

Forth from the East into the South ascend, And set thee down there in a Chair of Fire, For there is Harvest, that is to say, an end Of all this Work after thine own defire, There shineth the Sun up in his Hemisphere. After the Eclipses in redness with glory, As King to reign over all Metals and Mercury.

HEre thou mayst light and bait, and enjoy the glory of thy white *Elixir*, but do not, for thou hadst better wait the end. Proceed then with a Fire a little more increased unto the Summer or South quarter, where after some colours, as green, yellow, azure, and the like, thou shalt have a sparkling red, like unto the flaming Fire. Then thou art come indeed to thy Harvest, and to the end of all thy Operations; for now thou beginness by apparent colours the uprising of the Sun, after it hath been so long beclouded and eclipsed; now hast thou mourned long enough, now the time is come Sir G. Ripley's fecond Gate. 213 come that thou fhalt need no more to mourn, for the Bridegroom is now come forth out of his Chamber, and the Sun comes forth as a valiant Champion to win a prize : now is the time come in which that of the Poet is fulfilled;

IS

Ne te pæniteat faciem fuligine pingi, Adferet hæc Phæbi nigra favilla jubar.

Now hath our King of Peace attained his Kingdom, whole Government is, parcere fubjectis & debellare fuperbos; for whatever is infected our King will cure, what is lame he will heal, and what is rebellious he will fuppress and fubdue. Sic Regis ad exemplum totus componitur orbis.

And in one Glass must be done all this thing, Like to an Egg in shape, and closed well.

Now all these our Operations, as the Philosopher faith, are done in our fecret Fire, hidden Furnace, and in one Veffel; for if thou thinkest to make any of these Operations with thy hand, thou art in a certain way of errour. Our Veffel Q 4 them

then, which for fimilitudes fake we call an Egg, must be fo closed when our Materials are fet in it, that the Spirits cannot poffibly get out, nor the Air get in, elfe our Work were spoiled.

Then must thou know the measure of Firing, The which unknown thy Work is lost each deal.

Let never thy Glass be hotter then thon, mayst feel,

And Suffer still in thy bare hand to hold, For fear of losing, as Philosophers have told.

T His done, we then fet our Veffel and Matter to the Fire, and let it ftand untouched till the Work be done : fo that the Philosopher hath nothing then to do but behold his Glass, and the Operation in it, and to govern his Fire artificially.

So then when once the Stone is fet to work, the whole Maftery is to govern the external Fire, which as the Philosopher doth either perfect or destroy all : if thy Fire be too flow for want of motion, thou wilt hardly ever see an end; and if too

3

Be not therefore immoderate in governing; and for better fecurity, let not your Glass neck be under a span in length, but as much longer as you shall fee good ; the longer for a Tyro, the better he shall work, and with the more fecurity. But the usual length which we use, is about 12 or 14 inches high ; this height being fo allowed, order fo your Furnace as to let out about 3 or 4 inches of the top of your Glass, which may come forth through the cover of your Athanor, and if you can without hurt feel or fuffer any part of that neck, fear not your Fire, but ftew him without fear, your Glass being strong, and the quicker Fire the better: hus whitheroon .

Yet know, that your Furnace mult be answerable, for do not believe that Philosophers did formerly use our Art of Furnaces, but made them of Brick, or Earth, with Earthen Covers, which had holes for letting out part of the necks of their Glass, over which if they put a Cover, which they could remove and set on

on again at their pleasure; this Earthen Cover was not to reflective of heat, as our Iron Covers are, but that end of the Glass which came out at the hole of the Cover, they could feel without any damage, and by their being able to fuffer that in their hand, they judged the temperament of their heat. Therefore in thy Furnace let thy Cover or Top be luted with good Loam every-where, at the least half an inch thick, fo shalt thou be fure not to have too fealding a heat in the concavity of thy Neft, which otherwife thou would thave, fo may thou govern thy Fire at thy pleasure; the necks of thy Glaffes which come forth, thou needeft not cover : fo shalt thou fee this of Ripley verified, thy Work will go on very fuccessfully, and thou wilt ever be able to endure thy Glass in thy hand; and this is the true meaning of all Philofophers, to give a certain rule by which thou shalt never exceed, and that is fo long as you can endure to feel any part of thy Glass, provided thy Neft be covered, and the ends of thy Glass necks come forthouse blace variations are

Tet

BE

1

. Sir G. Ripley's Second Gate. 217

Tet to my Doctrine furthermore attend, Beware thy Glass thon never open ne meeve, From the beginning till thou have made an end;

If thou do otherwise thy Work may never cheeve.

Thus in this Chapter which is but brief, &c.

A Nd that this is according to the fence of all Wife men, is evident by their, testimony in general, and the following, words of Ripley; See (faith he) that thon open not thy Glass, nor move it, from the beginning to the end of the Work. So then this feeling of the Glass, it must be such as may be without opening or moving of the seed be diffurb'd in its beginning to vegetate, the Work is undoubtedly spoiled, or at least it will be so notably weakned, that it will hardly afford thee thy true Signs in thy due time.

Therefore when thou fetteft in thy Egg in thy Neft, take heed of meddling with it until the Mastery be attain'd, but with a Wyre or some such thing, or with

3

a hole in thy Cover, ftay the neck of thy Glass from jogging this way or that, which otherwise it will be very fubject to.

Thus have I briefly run through this fecond Gate of Diffolution, which is indeed one with Calcination and Separation; for by a constant Sublimation, is made a Solution of the Body, and at length a Congelation of Spirits, for they by oft alcending, come to that pals that they will afcend no more, but remain at the bottom of the Veffel together. which is Conjunction : in which Conjunction they fwell, bubble and boil, till they calcine and putrefie. The black Earth, impalpable like Atoms of the Sun, being the highest degree of Putrefaction: and this is a fecret not fo clearly difcovered by any before.

THe Sun is fet, no wonder darkeft Night Doth veil the Crystal Skie : The Moon's cclips'd, no marvel that her light Doth from us hidden lie. The Sun's declined to the Northern Pole, And O the change that's made ! The

Sir G. Ripley's second Gate. 219

The pearly drops are turned to a Coal, All brightness quite doth fade. Is this Apollo bright, whose glory did A Instre great difplay? Is this fair Phoebe, who ere light was hid, Did shine as bright as day? Is this the King whose glory and renown Through all the World did ring ? Is this the Queen who far and near was Ob'tis a wondrous thing, (known? Such glory and such beauty thus should fade ! That what before did shine More bright then Tagus, should so foon be More foul then ere'twas fine! (made The Earth doth melt, the Heavens drop down The Rocks which do relent, (rain. They seem like Water, then condense again Till all their moisture's spent. To Ashes they return, for Dust they were, This Dust from Water springs; Therefore at length they melt to Water clear, Which all to Spirits brings. The Neft is Earth, therefore they will congeal To sparkling pearly dem,

Shining like tender Pearl, on which doth A Body dry and new. (fteal

And

220 An Exposition, &c.

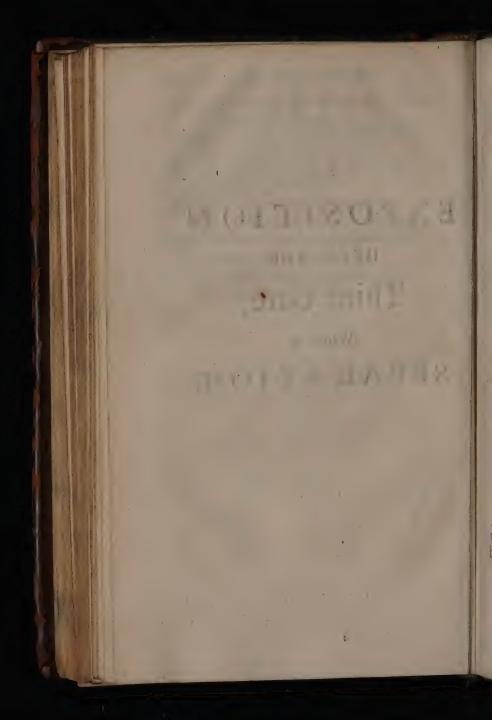

And then the parts like Atoms of the Sun For finenels do appear: Rejoyce, for now thou half thy course hast run, Nor hast thou cause to fear. Proceed until thou see the sparkling red, Oh happy fight to see ! By which unto the Royal Palace led, Thou shalt aye happy be. Happy are they who shall not miss to find The new uprising Sun : More happy they who with renewed mind, In God find rest alone.

A N

AN EXPOSITION UPON THE Third Gate,

Which is

SEPARATION.

The Third Gate Opened, Which is SEPARATION.

223

Separation doth each part from other divide, The subtle from the gross, the thick from the thin;

But manual Separation fee thou fet afide, For that pertains to Fools, which little fruit doth win.

But in our Separation Nature doth not blin, Making division of qualities Elemental, Into a fifth degree till they be turned all.

H Aving now run through two of the twelve Gates, I am come to the third, which is Separation, which begins fo foon as the Matters have been fo long circulated, as to begin to hold one of another. This Operation the Ancient Sages have denominated Divifion of Elements, which afterwards they fay mult be joyned with a perpetual union. This P Sepa-

224

Separation is by others called Extraction of Natures, and the parts feparated are compared to two Dragons, the one winged, and the other without wings.

(HI

Artephius, who for Age and Candor was next to Hermes the most eminent, calls this Separation the Key of the Work, which according to him is a Sublimation in a continual Vapour, that what is Heavenly and fubtile, may afcend aloft, that is, to the upper part of the Veffel, and there take the nature of a Body Heavenly, or Spirit; and what is groß may remain below, in the nature of a Body Earthly, which is the end of our Mattery, to bring the Bodies which are compact and dry, to become a Spiritual fume, which is only to be done by Sublimation, and Division or Separation.

So then our Separation is not to be underftood, as many foolifh Alchymifts do interpret it, who have their Elements of which they boaft much, which are indeed manual, done by handy-work, the Glafs being removed, altered or renewed every

Sir G. Ripley's third Gate. 225 every time. Nor are our Separations

made by filter, or per tritorium, as many imagine, who know not the nature of our Work, and therefore run into fuch foolifh fancies.

Nature then in our Work doth all in all, who as a curious Artificer maketh no confuled mixtures, but first of all causeth the moisture to ascend, which because it cannot get out, it doth therefore condense in drops, and descends to long till at length it begin to be acuated from the Body, which is below ; for naturally all homogeneal moisture, cohobated on a bodily substance, with which it hath affinity, is acuated by it. Gold then is a Body in which the active qualities of heat and driness, are more than in the Mercury, and the Mercury being cohobated on it, begins to be a little more Fiery or hot, and then the Exhalations are more Aërial, which before were more Watry, and by continued Cohobation the Water partakes yet more and more of the Solary nature, until at length this heat or Sulphur impregnating the Mercury, caufe it to congeal into a new Body P 2 or

or quinteffence, which is after the corruption of the old Body, which is called the Earth, or Afhes of Hermes's Tree.

Earth is turned into Water under black and

And Water after into Air under very white, Then Air into Fire, Flements there be no

Moe, Of these is made our Stone of great delight. But of this Separation much more I must write 5000

And Separation is called by Philosophers definition, Of several qualities a Tetraptive dispersion.

SO then this is the method of our Operation, Earth, that is Sol, is boiled in our Mercury, in fuch a heat in which the Mercury may afcend conftantly in a inioak, and defeend in drops, and the Body below ftand liquid and boil: theo fhall the Water dry up, under which is blacknefs hidden, which when the Water is dryed up thall appear like the Crows Bill.

Then

Then shall this Powder again relent, and after 40 days rotting without fumes, shall fend up a smoak again, which shall afcend and defcend for long, till the whole be made volatile and Aerial; then shall the black colour vanish, and the white appear.

This white Argent vive, or Mercury animated, which appears after blackness, fhall then totally congeal, and fhall be then Fire, whole Nurle is the Earth; then hast thou the four Elements, that is, cohobated thy Natures to the highest degree of perfection of the white Stone, then canft thou go no further, but go back and turn the fame Wheel till thou haft attained the red Stone. Thus haft thou the true Principles and Operation of our great Elixirs both red and white, which if thou once haft, thou haft Riches enough, and needeft no more in this life.

Of this Separation I find a like figure thus fpoken : So out of our Stone precious if thou be witty, Oyl incombustible and Water thou shalt draw, And thereabout thou needest not at the Coles to blow.

Thefe Philosophical Operations some have had the fancy to compare with some passages of Scripture, but I had rather bound Philosophy within its own Pale, and not allegorize the Holy Scripture thereto, where Philosophy is not understood there.

To the thing in hand; by continual decoction our Work will fhew, as in Circulation,

Sir G. Ripley's third Gate. 229 culation, a real change of the afcending Humidity; the first will be white, and to continue a long time, which is called Water or Phlegm, and after it the Water will be coloured, and after it the Water will be coloured, and after do on the fides of the Veffel, which is called Oyl; and this Oyl is not combustible, for it is the true Sulphur of Gold, and therefore as permanent as the Mercury.

ĩ

ļ

4

ş

e

ŀ

A

}-

Yet be not miftaken, nor do not imagine that becaufe we fpeak of incombuftible Oyl, that our Work is to be performed with the Fire of a Wind, Oven, or of Bellows, (as fome foolifhly imagine) to burn up what is combuftible, until the very incombuftible Oyl be left, for all our volatile fubject is turned into incombuftible fixity, with a moderate decoction in our fecret Athanor, whofe heat in its higheft vigoration is but very obfcurely red, hardly perceptible, and in its loweft degree is not full half fo ftrong, or half at the moft.

P4

Do

Do this with heat eafie and nonrishing, First with moist Fire, and after that with dry.

The Flegm with patience out-drawing, And after that the other Natures wittily: Dry up thine Earth until it be thirfty, By Calcination, elfe laboureft thou in vain, And then make it drink up the moifture again.

a second and a second second

pi

Ve

This is a heat which is friendly to the Bodies, for it caufeth the Spirit to afcend, and yet fuffers it to return, and by reafon of its afcending and returning, the Matter below ftands continually moift, and boileth with a perpetual motion and exhalation, which afcends and returns day and night every hour and minute without intermiffion.

This moift Air, or liquid form at bottom, with Ebullition and fending forth a fpiritual fmoak or Vapour, (in which, faith Artephins, the whole Mattery confifts) continues about fix weeks, or thereabouts, and then the boiling will turn to a Pitchy fwelling, and putting up like Leavened Sir G. Ripley's third Gate. 231 Leavened Dough; and from that time the Compound shall grow dryer and dryer, coming at length to Pitch-black Atoms, or Powder impalpable, and the fumes shall cease for fix weeks.

Be patient therefore in decoflion, and wait with a great deal of confidence, until thou feeft thy Water, which at firft afcends white and flegmatick, to begin to change colour, and the Exhalations to arife difcoloured within the Glafs. Then continue your decoftion till the Cloud which is conceived be brought forth: for in this Operation be fure that the Seeds begin to mingle, and will give you a fign of the beginning of the Conjunction of Natures, and that is the gilding of the Glafs about the fides within the Concave, as if it were overfpread with leaves of pure Gold.

Continue ftill your decoction, till the Earth at the bottom begin to appear, and the moifture of the Compound begin to be terminated in Drinefs, in colour Black, which is a fure fign of your right progrefs, and without which you can never attain the Maftery.

Remem-

Remember that in this Calcination thou haft a portion of Water in the upper part of thy Veffel, which did not defcend; and in the time of the ceafing of the fumes, the Body grows very dry, even to Calcination, which when it is intirely perfected, the Water is as it were by a Magnetical virtue drawn down, and then follows a fecond Liquefaction.

Separation thus must thou oftentimes make, Thy Waters dividing into parts two, So that the fubtle from the großs thou take, Till the Earth remain below in colours bloe 5 That Earth is fixed to abide all woe. The other part is spiritual and flying, But thou must turn them all into one thing.

B^{Ut} to return to our Work of Sublimation, which is as was touched before, the Key of the whole Work, by which Separation is made unceffantly each day and hour.

Thus are the Waters divided from the Waters, that is, the Waters above from them which are below; for part of the Water alcends up like a fume, and congeals . Sir G. Ripley's third Gate. 233 geals and runs down the fides of the Glaf. in drops like veins, and part remains ftill below with the Body, and with it boils vifibly, and that unceffantly.

By this Work thou hast the subtle or thin parts of the Body, and the thin parts of the Water, ascend and mingle; and the gross part of the Body, and the gross part of the Water, mixt below, the one by subliming together, and the other by boiling together : thus is thy Body below compounded of two even the most fixed parts of Sol, with the grosser parts of Lunaria; and thy Water of two parts, the Soul of Sol, and the Spirit of Lunaria, which is the true myssical ground of Fixation.

Thus by fubliming in a continual Vapour whatever is Spiritual and Heavenly, both in the Water and in the Body lightly afcending, and in the upper part of the Glass taking the nature of a Spirit, what is more groß, earthy and corporeal, will in the bottom take the nature of a Body, whofe colour, the Soul being feparated, will be as Black as Pitch.

This

the

This Body is a middle fubftance between the Body and the Water, a Linius, a new Body, or Adamica terra, a medium between fixed and not fixed; it is not fo fixed as to be equal to Sol, nor yet fo volatile as the Mercury, but it is fufficiently fixed to endure a Fire requifite for this Work, and to fuffer all the pain and woe of this our Purgatory, in which it abides fix weeks without fumes or vapour.

But as for the Spirit, that is a tender thing, nor is it able to endure the Fire, but flys from it, and abides in the uppermost part of the Glass; only so long as the fumes arife, the afcending do still meet with them which are above, till at last making over great drops, they fall down; and when the fumes ceafe, as much of the Spirit as the Concave of the Glass will hold without running down, stays above until intire Calcination be perfected, and then they are drawn down by a Magnetical virtue : So that here is all the mystery of the proportion of the Glass to the Matter, namely, that it be fo big, and no bigger, as in its Concave will

Sir G. Ripley's third Gate. 235 will hold up a competent quantity of Water, (after Calcination to water the dry pores) while the Body below rots into Atoms.

Then ihall you bring back the Water upon the Earth, and circulate again fo long till there be a total joyning, till the Spirit become the Body, and the Body become the Spirit, and all be made true Fire or Tincture; of which Conjunction this true Separation is the caufe, and without it it cannot be made.

Then Oyl and Water with Water shall distill, And through her help receive moving: Keep well these two, that thou not spill Thy Work for want of due closing, And make thy Stopple of Glass melting, The top of the Vessel together with it, Then Philosopher lick it is up shit:

IN this fecond Circulation, which is after Conjunction, there shall be no more the Body below and the Spirit above, but all shall be one, and the Body which is the Sulphur, shall always follow the Spirit on the Fire wherever it flys. The

Wary

326

The occasional cause of all this, is our first Water, which though vile, is therefore to be much valued, for it is very precious; through the virtue of which it comes to pais, that our Earth yields a Water, and causeth it to fly with the Spirit aloft, and is the Soul of our Sol, which at length doth allure the faid Spirit and Body to union, which elfe would never be : and then the Body beyond its own nature is lifted up, moving unceffantly with the Spirit and Soul upon the Fire, for all now are made one infeparably; and this is called the fealing the Mother in the belly of the Infant which she bore, that is, the Earth below is fo united to the Water that arole from it, that in this Operation after this true Conjunction, they are never more divided, but are together fublimed, and defcend continually, moving and altering continually until perfect Complement.

Now for as much as all the Maftery confifts in Vapour, which are called the great Winds, which are in the Veffel at the forming of this our *Embrio*, therefore Sir G. Ripley's third Gate. 237 fore great care must be had left the Spirits exhale. Which they will do, without the Glass have a strong guard; for first, they are subtle; nor that only, but ascend with a great impetus, by reason of our Fire, which must cause the inferiora ebullire & moveri continud, & inferiora circulari, quolibet momento; and thirdly, in Putrefaction the Body and Spirits have a most subtle odour, which also must be retained.

For preventing of all, thou fhalt have thy Stopple as firm as any part of thy Glafs, which let it be ftrong, as is faid, and the neck long and ftrong, and let the neck be melted up with a Lamp, or with Coals, and clofed well without much wringing, which makes the Glafs brittle; but being nipt up, and after that ftaying in the fame heat, turning it to and fro in the clear heat, the Glafs will come to as exactly clofe and fmooth a *fuperficies*, as in any other place.

This is the true and fure way which Philofophers have fecured their Glaffes by. Let it cool by degrees, and be very wary that it get no crack in cooling, which

t

fho

the

Thi

which if it do, though never fo little, you must not connive at it, less the winds within cause it there to burst, as being a weak defective place:

The Water wherewith thou mayst revive thy Stone.

Look thou distill before thou work with it. Oftentimes by it self alone, And by this sight thou shalt wit, From feculent faces when it is quit: For some men can with Saturn it multiply, And such like substance, which we defie.

Thus thou feeft how our Work must be ordered in reference to its Regimen, but the main matter is our Water. Which Water, as faith Artephius, is the Vinegar of Mountains, and it is the only Inftrument for our Work : its Preparation confists in Cohobation, which we will discover. In my little Treatife called Introitus Apertus, and in my other Tractate called Ars Metallorum Metamorphs feas, I speak as much of it as a man can speak, without giving a Receipt; but to the Ingenious, what there Sir G. Ripley's third Gate. 239 there is written is far better than any Receipt.

2

71-

he

2.

We

2.

11.

25

2

121

cre

This I fay, that it must first be cohobated in a very wonderful way, (for it is such a Cohobation that hath not its like in the World) and for several times, to a determinate number, and after it may and ought to be distilled per fe, without addition, again and again, that thou mayst have the Water clean from any Exotical mixture.

When it alcends like to the Pearled dew, thou mayst then know that it is fufficiently pure, which is not till all the filthine's be calt from the centre, and wash'd from the superficies: Thy Water then hath fo excellent a Pontick faculty, that it will diffolve Jupiter, Saturn, or Venus, into Mercury and Sulphur; for it commands Metals as their true Water Mineral, which no Mercury in the World is, but our Mercury, nor can be, for Reafons known to the Adepti, which if I fhould give, there would be none almost fo stupid but would easily apprehend them, for they are most demonstrable. This only I at present say of this Mercury, that

that it is the Mother of Metals, and therefore hath power to reduce them, by dividing their principles of Sulphur and, Mercury; but we count it a loss to imploy our Mercury to fuch fordid uses, for we spoil the goodness of it hereby. Gold only is drowned in it, that is, it is reduced without division of parts; but though the Sulphur and Mercury be for a time diftinct, yet they will joyn with the Water, and together, and fo remain perpetually; which other Metals in their diffolution will not, for their Sulphurs being not perfect, are rejected to the fuperficies, and never are received to union again, for they are Heterogeneous.

Diftill it therefore till it be clean, And thin like Water as it should be, I ike Heaven in colour bright and sheene, Keeping both figure and ponderosity: There with did Hermes moisten his Tree, In his Glass that he made it to grow upright, With Flowers discoloured beautiful to fight.

SO then to return to what we digreffed a little from, thy Water mult be fo

is wh

P

tin

m

th

Sir G. Ripley's third Gate. 241

fo long diffilled, until it be very clean; for this, faith the Philosopher, is thy first work, to make clean thy *Mercury*, and then into clean *Mercury* to put clean Bodies, for who can expect a pure Generation from that which is unclean?

The next property of thy Water is, that it must be thin, even as thin as any other *Mercury*; for if the external proportion be corrupted, it is an evident fign that the inward nature is confused.

It must also be of a very bright colour, even like to fine burnished Silver, as faith Artephius. Hence faith a certain Philosopher, that our Water to fight is like to a Coelestial Body.

Our Water must not be reduced into any limpid Diaphanous liquor, as fome fondly imagine, and as I my felf in my time of errours did conceit, but it must keep its *Mercurial* form pure and incorrupted. It is also very ponderous, so ponderous that it is somewhat more weighty then any other *Mercury* in the World.

This is the only one Mercury, and there is none in the whole World befides it which can do our Work : with this Q 2 Hermes

tal,

By means of this Water the Body shall be brought to have a vegetative Soul, for it will shoot forth as with Sprigs, and Leaves, and Branches, and after it will resolve into Powder like Atoms.

In the time of this process many colours shall come and go, rife and set, which will be a pleasant spectacle to the beholder, and shorten the time wonderfully, which else would seem very tedious.

This Water is like to the venomous Tyre, And with it the mighty Triacle is wrought; It is a poifon most ftrong of ire, A ftronger poifon cannot be thought, Oft times therefore at the Pothecaries it is No fought. But no man shall thereby be intoxicate, From time it is to Medicine Flixerate.

This Water is by Philosophers called their Venom, and indeed it is a very strong poison, to wit, to the Body of Sol, to which it is mixed: but what it is to the

Sir G. Ripley's third Gate. 242 the Body of Man, I never tried my felf, nor gave it to another, nor do I believe did any of they. But as concerning the Medicine that is made by it, and out of it, it is certain, that of all Medicines in the World it is the highest, for it is the true Arbor vite, which doth answer the universal defires of them who have it in this kind; for belides its virtue Curative, which it hath in a wonderful miraculous way, it can penetrate even to our Constitutive principles, which no other Mineral Medicine can do. Though Paracelfus glory much of his Renovantia & Restaurantia, (which we have known, as being Masters of his secret Alcahest, of which if I live I will write a particular Treatife) yet it is not his Hamatina. nor yet his Arcana, nor his Elixiria, nor his Estentia, nor any of his fecrets, which are furely noble Medicines, that can reach the root of Life, which this can and will; for it performs all, only it cannot prevail against the appointment of God, otherwise were it not for that decree it could really keep a man immortal, for it renews Youth, retards Age, Q 3 and

and reftores to most exquisite and compleat health; encreaseth strength wonderfully; yea it will not only renew Hair to those from whom it is fallen, but it will change the hoary head into a youthful colour, which will not grow hoary again for many years, nor ever, if the use of it were fully known, and it were used as it ought to be.

Hereupon in respect of its wonderful virtue, after it is made into Medicine, Philosophers have by Analogy concluded, that it was before the greatest poison, for they have a Maxim (ex fummo veneno, fumma Medicina) which as I do not always hold true, so I shall not here dispute. But he who thinks, because Philosophers say it is such a deadly poison, that it is to be bought at the Apothecaries, or Druggists, he is missaken; for as it is first bought, I confess it is very venomous, but this malignity I conceive and know is fully taken away, before it become the Philosophers Mercury.

But whatever it be in its Grudity, I am fure it is not fo in its Perfection, for he who fhall take of it then, fhall be fo far from

Sir G. Ripley's third Gate. 245 from receiving any damage by it, that he shall find it to be a soveraign Medicine, which hath not its like in the whole Universe.

For then as is the Triacle true, And in its working doth marvels shew, Restoring many from death to life; But fee thou mingle it with no Corrofive, But choose it pure and quick running, If thon thereby wilt have winning.

IT is not the Triacle of Galen, nor yet of *Hippocrates*, (which yet if right made are of great efficacy) that can compare to it; for first, it kills all the venom of any difease or malady, so that those difeases which do astonish the beholders, are by this overcome even ad miraculum: for suppose a man dying with the Tokens of the Plague, fo that he is upon the very point of departure, (and the decree be not past, for then there is no recovery) if he have but a drop of this Elixir poured down, fo that he fwallow it, he shall immediately recover, and in fhort time he will be reftored to his former

mer health. Now that it doth immediately reach the root of Life, I shall demonstrate: Suppose one with a very languishing disease be confumed to nothing in comparison, and for want of Spirits be just going out of the World, fo the decree be not past, if he have but strength • even in the Agony of death, but to take a drop of this Elixir, he will recover and revive, and in a few days in comparison will be doubly stronger then ever he was before. Suppose one of a very weak Constitution, and fickly, and every day ill, feeble all over, if he take of this Elixir, it will in a thort time alter his Constitution fundamentally, so that he shall be far stronger then any other man ordinarily is.

A noble Philosopher (though I scarce believe him to be an Adeptus of the Stone) hath wrote of late a small Treatife of Fevers, the Lithiasis, and the Pestilence, and there he saith in one of his Tractates, That the loss of strength which is made by Venery and Bloud-letting, is wholly irrecoverable. It is true, and I verily believe that he had Medicines very noble, Sir G. Ripley's third Gate. 247 noble, and it is pity but he had this fecret to preferve his old age, for I ferioully profess, that of all the Tractates' that ever I read, they are the most Philosophical; but by this expression it is evident, that he was ignorant of this fecret.

For although by Venery, or a Tabes, or Bleeding, or by any other way a man be debilitated, he may be reftored by this Elixir, not only to perfect health, but alfo to fuch a measure of strength which he never had before. Yea and a man or woman who is born to hereditary weaknefs, may be changed into a more then ordinary frength by the use of our Medicine : or a man who by labour, fickness and years, is come to the Graves. mouth, even to drop in it, may by use hereof be reftored his hair, his teeth, and his ftrength, fo that he shall be of greater agility then in his youth, and of greater ftrength, and may live many years, provided the period of the Almighties decree be not come.

For Minerals are of all Sublunary Bodies the molt perfect, and the belt part of them

them are Metals, which when they are perfect, defend themfelves from all fear of corruption perpetually. Now the Spirit of the Metal when it is exalted to a millenary perfection, it tingeth all Metals imperfect to an incorruptible purity; but then this Spirit must be made a Body, according to the faying of Hermes, Vis ejus est integra si versa fuerit in terram.

But this transcendent Tincture may be diffolved into an Oyl, or rather a pure Liquor, which then is not proper for Metals, but is only Medicinal; for it is of the nature of Light, and therefore it doth as readily concur with our formal vital principle, as one flame will enter another.

Yea and beyond this, it may be exalted beyond the nature of man, yea and of any tangible Body, to become a moft radiant perpetual Light, which I have feen, though not my felf actually made. All this is done by the Divine virtue of our Water, which is to be prepared, as is faid, by Cohobation and Diftillation, for our Water is a living Water, and not Sir G. Ripley's third Gate. 249 not corrolive, as many do mil-interpret our Books.

These then are the circumstantial qualities of our Water, it is pure, clean, and very bright, it is quick, and very fluent, without Humectation; it is the only profitable subject that we can choose for this Art, and whatever can be taken in hand in the World besides this, is but fallacious.

It is a marvellous thing in kind, And without it can nothing be done, Therefore did Hermes call it his Wind, For it is up-flying from Sun and Moon, And maketh our Stone to fly with it foon, Reviving the dead, and giving life To Sun and Moon, Husband and Wife.

I T is of a wonderful Composition, yea fo wonderful that if thou shoulds know it by relation only, thou coulds not believe it. Study therefore only to know it, for it is the very hinge on which turns all perfection, it is that which the Wife men never revealed but only in Figures and Metaphors.

Some

Some have called it their fharp Vinegar, because of its diffolvent quality; others have called it a Bird, a Goofe, a Phefant, and many such names they have given it.

De

W

de

po ph fix

Fai

m

Bo

But becaule it arifeth in the form of a Wind or Vapour, the Philosophers have called it their Vapour, their Smoak, and their Wind; and for this cause command, that the Porter keep diligent watch, that it fly not away or exhale, for it would spoil the Work.

This Water then flyeth the more Spiritual part of it, and the Corporal part remaineth below in the form of an Humidity, which doth bubble and boil continually, and the smoak in the Head condenseth and returneth in drops upon the Body; and by this means the Body of *Sol*, which is most fixed, to the astonishment of Nature is made volatile, and fends out in the Exhalation of the Water its subtle fiery Soul.

Thus the dead Body hath infused into it a Spirit of life, and begins to be endowed with a living Soul, which moves aloft with the Spirit, and returns with the Sir G. Ripley's third Gate. 251 the fame, till the Body be wholly renewed.

And by this means the Body of the Sum retaining the more Corporeal part of the Water at the bottom, they boil together, and enter one another, and fo both by decoction become more and more Corporal, and make together one Hermaphroditical Body, of which the more fixed parts of the Sum, and the groffer parts of the Water, are the Component principals : So that being thus mixed, the more Corporal parts below, and the more Spiritual parts in Sublimation, the Bodily part is Husband and Wife to it felf, for all Conception is made at the bottom of the Veffel.

THefe Bodies do fend forth a thin fubtle fume, which may be compared to their breath; and the returning of it, and fuming continually, may be likened to the breathing in and out of Air, for faith Artephius, all things live by Air: and fo our Stone it is infpired by the Air, which Air is the fume which alcends continually, which partakes of both Natures as well as the Body below doth. Alfo this makes that below to boil and fwell continually, which it would not do, did not the Earth retain the moifture; and the Sublimation carries with it the fubtilest part, or Soul of the Body, which eafily appears by its changing of colours, for whatever coloureth is of Sulphur, which is unctuous, and therefore the

Sir G. Ripley's third Gate. 253 the Sublimation appears pinguous: the medium of this Extraction is Water, becaufe our Water and the Sulphur are Homogeneal.

Wherefore in this Circulation there are two things to be confidered, the bottom, and the top; the bottom is not only the Body of Sol, for fo it would not ftand liquid, and flow, and boil, and bubble as it doth : therefore it is certain. that the Body retains part of the Water. which is more thick, which thickness digestion and mixture hath caused; which groffer part of the Water is joyned with the Body, but not perfectly united. The uppermost part is not only from the Water, nor yet the most whole of the Water, but a certain subtle portion of your first Vinegar, which hath in it the most pure part of your Gold, which is sublimed with it, which both together make a medium of much Firiness : So then by reason of the mixture both the uppermost and the subsident part are reduced to a mean, which hold one of another; therefore our Body at this time, and in this Operation, is called the Body both of

of the Sun and Moon, and the Vapour contains both the Soul of the Sun, and the Spirit of the Mercury. Take this for your prey, for I have reveal'd what Philofophers upon penalty of an Anathema would never difclose.

³⁰⁰ If you have well attended to what I ⁵ have faid, I have faid enough, and if this do not fuffice you, I know not what will. Remember well what I have faid, if you ever expect fuccefs.

To fum up all therefore in one word, for I have been fo long that I fear I have been too prolix: Remember what you go about, and what you work on. You take in hand an Earthly Body, which you would bring to a Heavenly Tincture. This you would effect by Mercury, which is the only way or medium in the World. First then, fublime till by Mercury thou hast brought thy Body to the height of volatility, and thou thalt find that in this diffolved Body there will be fuch a ferment, which will recongeal the Spirit.

Which when they be exalted make to descend.

So shalt thou unloose that which Nature erst did bind,

Mercury essential turning into Wind; Without which natural and subtle Separation,

May never be compleat profitable Generation.

F Or the Body though in its manifesto it be Sulphur congealed, and dry, yet in its occulto it is Mercury liquid, and moist: Now the Water which thou mixest with it hath this vertue, to open its pores, and then the Water of the Body will as naturally agree and ascend with thy Water of Life, which thou didst put to it, as one Water will joyn with another.

Now as Sol hath a hidden Spirit, fo hath our Mercury, which is in it invisible; for to fight it appears as other Mercury, only a little brighter, but in effect

R. "

they

they differ wonderfully : which Spirit will as naturally unite with the Soul, or Fiery part of the Body, as Light will mix with Light, and then the gross part of the Body, and of the Water, in the bottom of the Veffel, will be brought in abfence of the Soul and Spirit to putrefie. So then these two Fiery Natures being Homogeneous, will readily mix, and will fublime together in form of a white Smoak or Vapour, as faith noble Artephins, and there condensing in the top of the Veffel, that is, about the fides, and in the Concave of the Glass, will return again and circulate up and down, till it have destroyed the folidity of the Body, making it no Body, but fubliming what is fubtle, and what is earthly and refifting turning into Ashes, or an impalpable Powder, by Calcination.

17

ENI

ł

V

K

th

And after Putrefaction is compleat by Circulation, the most fixed part which is called the Body of Fixion, the effential and most permanent part of both Body and Water, will ponderously be listed up and carried alost into the Air.

And without this Separation and Division,

Sir G. Ripley's third Gate. 257 vilion, all is nothing, for this is the very Key of the Maftery, it is the caule of Generation: therefore in vain is whatever is attempted without this, boiling the groß, and fubliming what is fubtle, that in the troubles of the ftormy Sea, which works up and down as the Sea in the mighty Winds, what is pure may afcend, and whatever is impure may remain at the bottom; and when all that is pure is afcended, that which is left is called the Earth that remains. So Artephius.

A

TFI

F

And as the Key of all our Operations is Separation, so the Key to it is our true Mercury, truly prepared and proportioned as it ought to be. Now the proportion of thy Water, is in reference to its internal additional Sulphur, which is added by the Philosopher; which is done by fucceffive Eagles, which are made by our Philosophical Arsnick, the number of which ought to be leven. The darknefs vanishing, and the light appearing, after many flowrs, before the flight of each Eagle, our Water being thus acuated, is by Acuation purged, and then it becomes powerful in diffolving the Body. which will be done with a fewer number of Eagles, or a greater, but with 7 or 9 most defiredly.

This acuated Water is also the Instrument which doth move the Gold to putrefie, which no other Agent in the World can do; for by this the Body is ground, softned and mollified, the pores of it are opened, and the Sulphur invisible Sir G. Ripley's third Gate. 259 ble is fet at liberty, which caufeth the Body to rot, change colours, and at length become black like unto melted Pitch:

But if thou omit any of the number of Eagles, or fail in the goodness of thy Arfnick, or erre in the preparation of the Water with thy Arfnick, either in Conjunction, or Purification, or Digestion, or any other errour, of which experience will warn thee, do not then expect that the most exact Regimen of heat of thy external Furnace will do the Work.

Four Fires there be, which thou must understand,

Natural, against Nature, unnatural also, And the Elemental, which doth burn the brand;

These four Fires use we and no moo, Fire against Nature must do thy Body wor. This is our Dragon as I thee tell, Fiercely burning as the Fire in Hell.

Now to give thee a touch concerning our Fire, which he that knows may R 3 well

well be accounted a Mafter of our Secrets: We have indeed four Fires, which is one more than Artephius numbred, which yet he intended to include. The most noble Fire is Natural, which is that which we feek to have multiplied, and that is the Sulphur of Gold, or rather its Fiery Tincture; it is that which we feek for, and we use Mercury for Solhis fake.

Our next Fire is our Fire against Nature, and that is the Fire of our Water which is to be corrupted, and by this corruption Multiplication is made.

The third Fire is Unnatural, which is the mixture of these two Fires, while they are in their action and passion, and neither doth actually predominate.

Now for to give you a reafon of these Fires denomination, know that Mineral Fire is Sulphur, which is hot and dry, and it is the death of the Mineral Tree, that is, it is the cause of coagulating, that is, taking away the flux of the Mercury which is cold and moiss in Gold is apparent, for it is a coagulated perfect Body, fixed and permanent in all tryals:

S:

But now our Water hath an actual and active Sulphur in it, and yet quick and fluid, a Fire in Water which yet is not burned; this Sulphur is true Gold, and yet it is volatile; this is a Riddle, the Philosophers Mystery, and yet true; this is contrary to Natures ordinary operation in Mineral Bodies.

Now Nature will always care and provide for her own Child, before a Stranger; Gold is her own Son, and is according to her own Rules: but this Mercury is the Son of the Philosopher, to whole nativity though Nature contribute her help, yet he is out of her ordinary road, and through the co-operation of Art and Nature, he is for his qualifications an astonishment to Nature, hot and dry internally, and that actually; for it is impregnated with real Sulphur, and yet not coagulated, but in one word Ignis aqua, Gold truly fo called, and that most pure, yet volatile and crude, and no abortive ; not perfect, yet left in the way to perfection, and yet its virtue active, not extin-**R**4

extinguished. This subject Nature finding mixed with her Son, the King, even Gold, by it she endeavours to mend his Constitution, and to multiply his virtue; for though living Gold be a thing of admirable force, yet being out of the ordinary channel of Natures operations, Nature doth not mind its prefervation, much less its propagation.

C

b

f

These three forenamed Fires are internal, fecret and invisible, but there is one more which we use, which is not ours properly; for every Sophister hath it and useth it as well as we, and that is Culinary Fire, which yet is so necessary that without it we can do nothing, nor yet without the true knowledge of its due proportion. So then we use no Fires of Dung, nor of the Sun, or of Baths, as some Sophisters perswade themselves and others, for these are all the Fires which we use.

With the fecret Sulphur that is in our Water, which we proportion exactly in the beginning, we open our Body, for this Fire can do and doth that which no other Fire can do, for it deftroys and conSir G. Ripley's third Gate. 263 conquers the Body, and makes it no Body but a Spirit.

Id

1-

So that whatever any Sophifters may fuggeft, our Fire is Mineral, it is Sulphur, and that pure; it is united to the Water in one form, and yet hinders not its flux, nor corrupts its form:

This is the true Jgnis Gehenne, for it Eclipseth the light of the Bodies, and makes them become black as Pitch ; which is a symbol of Hell, and for its Cimmerian darkness is by many of the Wise men called Hell.

Fire of Nature is the third Menstruat, That Fire is natural in each thing, But Fire occasionate we call unnatural, As heat of Ashes and Balnes for putrefying. Without these Fires thou mayst nought bring To Putrefaction, for to be separate, Thy Matters together proportionate.

O Ur natural Fire is, as I faid, the true Sulphur of Gold, which in the hard and dry Body is imprisoned, but by the mediation of our Water it is let loose, by rotting the moles of the Body under which

which it was detained, and after feparation of Elements, it appears vifibly in our third Menstrual.

2 1.15

P

W b

21

1

2

1

For though Gold be a compact and dry Earthy Body, none may think that it became what it is without the virtue of a Seed, which by perfection is not extinct, but fealed up only; which Seed is a Fiery form of Light, which nothing in the World wanteth, and therefore it would be a great *Anomalum* if it fhould be only defective in Metals, the choice of all fublunary Bodies.

Betwixt these two Fires, in the time of their action and passion one upon another, and from another, there is made a *medium* which is part of both, which because it is not altogether natural, nor wholly against nature, is called unnatural.

The duration of this unnatural Fire is from the time that the Body begins to open, and colours to change, that is in a word, all the time of the rule of *Saturn*, and part of the rule of *Jupiter*, the whole Regimen of Putrefaction, and fo much of Ablution until the Dove begin to prevail Sir G. Ripley's third Gate. 265 vail over the Crow; which Putrefaction as it is the turning of an intire Wheel, fo part of it is done *in ficco*, when the Body is all a difcontinuous Calx or Athes, and part *in bumido*, which is called a Bath, when the fublident part is hquid and boils, and the fuperiour part vapours aloft and defcends.

Thus you fee how many Fires we have, and how they are diffinguished: wherein I have written what I know, and as many as understand me will esteem my Writings highly; for without boafting let me affure thee, thou hast not such another Directory in the whole World: I may speak it without offence, being unknown to thee, and thou to me. This I fay not to detract from any Philofopher, for many were deeply feen in this Mastery, but almost all were envious, and the most candid would have judged my plainness deserving an Anathema maranatha. I have here laid you to plain demonstrations as I go, that you cannot mils, if God direct you; and without the knowledge of the Fires you are far wide, whatever whimfies you have in your

your head; for you shall never see the diffolution of the Body, nor shall you ever make black, and by confequence you cannot divide Elements as you ought to do, because you proportioned not your Matters wisely in the beginning of the Work; for, Dimidium fatti qui bene cepit, habet, he who makes a good beginning, hath as good as half done. Therefore make Fire thy Glass within, Which burneth the Body much more than Elemental, if thou wilt win (Fire Our secrets according to thy defire : Then shall thy Seed both rot and spire, By help of Fire occasionate, That kindly after they may be separate.

TAke then my counfel, be not fo careful of the Fire of the Athanor, as of your Internal Fire; feek it in the houfe of Aries, and draw it from the depths of Saturn; let Mercury be the Internuncio, and your fignal the Doves of Diana. By the River you shall find a Tree, in which is the Nest of 10 Eagles; take of them 7, 9, or all, but take them very white, Sir G. Ripley's third Gate. 267 white, which oft plunging in the River will cause : with these you may overcome the Lion.

The heat of their ftomachs is far more powerful than any Fire in the World; for in it Gold will be deftroyed, that thou fhalt not know what is become of it; which yet lofeth nothing from it felf, though exposed to the greatest violence of any flame.

Thus with patience thou fhalt fee thy defire fulfilled, and thy heart fhall rejoyce; for a wide door fhall be opened by which thou mayst behold the Mysteries of Nature in all her Kingdoms.

In 40 or 50 days thou thalt behold the higheft fign of most perfect corruption of thy perfect Body, which of a dead lump is thus become Seed, in which though many cannot believe that there is any active virtue, yet it is now to the astonishment of Nature made living, and by its life it kills that by which it was made alive, and both being mingled make one Bath, which by continual decoction, moving the Earth and Water below, and circulating the Air and Fire above.

above, make at last one inseparable quintessence, the Father of Wonders.

Now to God only wife, the revealer of these hidden Mysteries, be praise from all his Creatures for ever.

Of Separation the Gate must thus be won.

Thus I have run through this Gare of Separation, which might be enough, for it is all; but becaufe the Wife men have made many Operations for to hide the fecret; and have feattered their notions here and there in every Gate or Operation, fometimes being at the beginning, fometimes at the end, thereby to puzzle the unwary; I must to make this Treatife intire, run through the reft with what brevity and plainnefs I can.

CONJUNCTION.

The Fourth Gate Op

After the Chapter of Natural Separation, By which the Elements of our Stone diffevered be, The Chapter here followeth of fecret Conjunction, Which Natures repugnant joyneth to perfect unity, And fo them knitteth that none from others may flee, When they by the Fire shall be examinate, They be together fo surely conjungate.

Aving run through the Chapter of Separation with a plain ftile, we fhall now come to the life of all, which is Conjunction; for we feek not a thing which may be capable of Separation, but which may abide in all tryals, the parts being impoffible to be S 2 fepa-

276

1. C. 1.

feparated one from another, for lo our Tindute ought to be, or elfe it will be wholly unprofitable for our purpose. For Separation is but the middle motion, by which we pass from the unary simplicity of Gold, to the millenary plusquam perfection of our Stone; before which can be attained, there must be a loofing of the Compages of the Body, that fo the Spiritual Fire, or Tincture may be set loofe; which being loofed, will certainly multiply it felf with that by which it was diffolved, with which it is neceffary that it fhould Radically be mixed and united, fo as that both the diffolvent and the diffolved may make one together.

This then is the benefit of our Water, that it doth not only reduce, open and mollifie our Body, and caufe it to fend out its Seed, but it is actually recongealed with the fermental virtue of this feminal influence of Gold, that it becomes together with the Body, one new Body perpetually united.

So that although our Water be volatile when it is first taken, yet notwithstanding after it hath first made the Body

Sir G. Ripley's fourth Gate: 277 no Body, but a Spirit, in which fpiritualizing the Virtue or Tincture is augmented; after that the Body by Congelation, makes this no Spirit but a Body, by which the fixity is advanced mightily, fo that both will endure all Fire.

For it is not only an apparent union that is made, but real, fo real that the Spirit and the Body pais one into another, penetrating each others dimensions, the Spirit being one with the Body, and the Body being the Spirit, the Form swallowing up the Matter in unity, so that all becomes really Tincture.

And therefore Philosophers give this definition,

Saying this Conjunction is nothing elfe But of diffevered qualities a Copulation, Or of principles a Coequation as others tells. But fome men with Mercury that Apotheca-

ries fells, Meddleth Bodies that cannot divide Their Matter, and therefore they slip aside.

OF this Operation Philosophers make a great Mystery, and speak of it S 4 very

very hiddenly, in respect to the terminus of it, which they call the hour of the Stones Nativity, in which they say many marvels will appear, for all the colours that can be invented in the World will be then apparent.

Some fay their Conjunction is our reconciliation of Contraries, a making friendship between Enemies, because in that time the volatile is still ascending and descending upon the fixt : this is by them ascribed to Contrariety.

Others measuring all sublunary things by the rules of Symmetry and Ametry, do afcribe this Operation (which they for fimilitude fake compare to a Duel) to the over-prevailing of one principles qualities above the qualities of the other, and therefore they define Auriety to be the Anaticalness of the four Elements in mixture, each in his quality acting proportionable to the refiftance of its contrary, & vice ver/a. But this is but an Entanglement, in which the Chymifts ftumble upon School Academical Principles : I had rather embrace their Secret, as for Operation; but for Philosophy, jump 1 1.7.2

Sir G. Ripley's fourth Gate. 279 jump with that noble Bruxellian, whole promised Treatifes when the World shall enjoy, I suppose they will be the profoundeft piece of Philosophy that ever was revealed to the World: which I admire not fo much for his Experiments, of none of which I am ignorant, nor Paracelsus to boot, many, yea most of which are far harder (though fooner wrought) than the Elixir, and the Alchaheft is a hundred times more difficult ; but what I most honour in that noble Naturalist is, that he did fearch out the Occulta Natura, more accurately then ever any did in the World. So that (fetting afide the skill of this Maftery, of which I cannot find any footsteps in what of his is extant) I am confident he was without flattery Natures Privy-Counfellor, and for Philosophical verity might have commanded this Secret; but God doth not reveal all to all men, yet who knows what he may live to be Mafter of in this point too.

ľ(

To return whence I digreffed; our final fecret is first to unite the Spirit and Soul of our diffolving Water, that by the mediation of the Soul, the Spirit and Body may be conjoyned, and then after feveral Sublimations and Precipitations made for that end, that the Body may be fpiritualized, and the Spirit corporalized, fo fix together the Soul, Body and Spirit, the flying and the fixt, that all the Elements (to use Philosophers terms) may acquiesce and reft in this Nest of Earth, in which all the virtue of the superiours and inferiours is contained, both in power and act.

From what hath been faid may appear, the ftrong paffive delufion that hath taken many men of our Age, and formerly, who with the Chymift in Sendivogius, cannot

Sir G. Ripley's fourth Gate. 281

cannot dream of any other Mercury, then that Mercury which is to be bought at Druggists, which they take and sublime varioully to make it clean, and then with Hogheland mix it with Gold, applying all the words and fayings of Philosophers to this their mixture : But when the time comes that they should see the figns specified of the Philosophers, there they fail, it may be by reason of something external to the Gold, (which it gets in foliating, or the Mercury, which it gets in washing and purging, which though it be but little, yet it is enough in heat to give a light Tincture to the Superficies) they may with Hogheland, fee a discoloured outfide, which is nothing; for our Operation is not fo trivial, that a man had need of Spectacles, and a most clear light to discern it: but it is so apparent, that a half blind man would be amazed at it, for our Body, even the perfect Body is divided, which common Mercury can never do, though a man blefs himfelf never so much in his mock-purgations.

But when as fuch Work-men have waited their time out, and it may be out again,

again, and fee not blacknefs, then they run into another extreme, and fhare the fault of their errour (which was only in their Mercury, or withall in their proportion for pondus and heat of external Fire) between both principles, and then fay with Hogheland, our Mercury and our Gold are not vulgar, but they are fomething (no man knows what) which the Philofophers have called Gold and Mercury; which yet are fome ftrange thing which man never heard of, or fome common thing, or fome vile thing. Thus they vanifh into fmoak, and all for want of knowledge of our true Mercury.

For until the Soul be separate, And cleansed from its original sin With the Water, and throughly spiritualizate, The true Conjunction mayst thou never begin. Therefore the Soul sirst from the Body twine, Then of the corporal part and of the spiritual, The Soul shall cause Conjunction perpetual.

R Emember then that thou get fuch a Mercury, which may deftroy and conquer

Sir G. Ripley's fourth Gate. 283

quer thy Body; mollific it, foften it, and draw out its Seed, and fever the Soul from it, by virtue of that Spirit which is in thy diffolving Water; Spirits naturally uniting with Spirits, as one flame will mix with another.

Ĉ

The Soul being thus fevered from the Body, it will dry and rot as naturally as any other thing will, that hath its Soul feparated. And as by the Water (which extracts the Soul) it dies and grows putrid and black, fo by the fame Water it is walhed from its filthy blacknefs; then the clean Soul having cleanfed the Body, is united to it, that from that time the Body follows the Soul, and is moved always with it upon the Fire, flying and defcending in the form of a Spirit, which is a wonder to behold.

This is our Secret fo much effeemed, Conjunction, which is celebrated after the loofing, putrefying and purifying of our Body. This is the true procefs of our Work, according to the true exigency of Mature; first the Soul is to be divided from the Body, that is, grofnefs may be purged by corruption and rotting, and

the

lò

the Spirit which is a form of light, and feminal, may, being let loofe, multiply it felf by the Spirit of the Water, and fo being allied to the Body from whence it was drawn, and to the Water from whofe Spirit it receives an increase in virtue and Tincture, it may unite both the Spirit and the Body with a perpetual bond. He who works thus, shall undoubtedly attain unto perfection.

Of two Conjunctions Philosophers mention make, Grass when the Body is with Mercury reincrudute 3

But let this pass, and to the second heed take, Which is, as I faid, after Separation celebrate, In which the parties be left with least to colligate,

And so promoted anto most perfect temperance,

That never after may be repugnance.

B Ut when as the Philosophers speak of Conjunction, it is warily to be confidered of what Conjunction they do mean, for assistist a term very often used, Sir G. Ripley's fourth Gate. 285 fois it very doubtfully to be taken. One Conjunction which they speak of is gross, which is properly Amalgamation, it is the first Operation after the preparation of the Mercury.

it

It

ue

it

n

2-

23

ê,

t o

e-

ŀ

1,

But this is not the Conjunction here to be underftood, but a more fecret by far, in which man worketh nothing at all, but ftands by only and beholds Natures Operation. And this work is done without any laying on of hands, and very quickly, when the Matters are prepared and made fit. This work is therefore called a Divine work.

This Conjunction is far more intimate than the groß, for this is an union per minima, or intima, fo that the effence of the one, enters the effence of the other, fo as to make it but one fubftance.

This maketh a temper which man by no Art could make, for even as Water mixed with Water is infeparable, fo is it now with these principles. Now is concord, amity and triendship made, for now the hot and the dry, will embrace the cold and moist, and now patience is made between the Water and the Fire.

Thus

Thus causeth true Separation true Conjunction to be had,

Of Water and Air, with Earth and Fire; But that each Element into other may be led,

And so abide for ever at thy defire, Do as do Dawbers with Clay or Mire, Temper them thick, and make them not too thin,

This do up-drying the rather thou shalt win.

Thus the Proverb is verified, Amantium ir a amoris redintegratio est, for Love brought them together, Love parted them with a feeming difcontent, and at laft Love unites them with a perpetual tye, that they can no more part for ever, without a new Refolution in this diffolving Water, after they are first become perfect.

Now the fame thing is both moift and dry, hot and cold, according to the qualities of the Elements, (that I may fpeak according to the ufual voice of Philofophers) for now is of two made three, and of three made four, and of four one;

29

; ;

10

For the effence of one Element now penetrateth the effence of another, that is, the effential properties are fo throughly mixed, that all four now make but one partaking of all.

Thefe are those principles which God now hath conjoyned, and therefore nothing can separate: Rejoyce now, O Son of Art, for thou hast the Sun for thy Diadem, and the Moon Crescent for thy Garland.

That thou mays the more certainly, eafily and speedily attain to this, and that thy signs may the better and orderly appear, next to thy care of preparing true and purged *Mercury*, and pure Gold, first be sure of thy mixture, mix them like as a Potter mixeth his Loam.

Be fure you do not over-glut your Earth with Water, nor cloy your Water with Earth, but impaft them, and then grind them together as diligently as a Painter would grind his Colours; for the more exactly thou mixeft them, the T better

better and fooner will they work one upon another in hear.

Then fet thy Glass in a Furnace made for thy Work, and give a convenient Fire, in which it may boyl night and day perpetually, without a minutes ceasing; order the Fire fo that it may in 12 or 24 hours begin to boyl, and from that hour not to cease boyling, fubliming, afcending and descending, until such time as the moisture be drued up, and all remain below (at least greatest part) in form of a discontinuous Calx.

But manners there be of our Conjunction three,
The first is called by Philosophers distative,
The which between Agent and Patient must be,
Male and Female, Mercury and Sulphur vive,
Matter and Form, thin and thick to thrive.
This I esson will help thee without doubt, And our Conjunction truly bring about.

IN Cw to help thee throughly in this mystery of Philosophical Conjunction, Sir G. Ripley's fourth Gate. 289 on, I fhall particularize all our Conjunctions. We have particularly three Conjunctions, all which must be known by him who intends to compleat this Mastery.

6

T

7

12

うってき

1

ę.

S

-

1,

The first is gross, which I touched before; it is the Amalgamation of Sol with our Mercury, which because the mixture is made of two things, it is called Conjunction diptative; and the Compound is now called Rebis, that is, two things, according to the verse, Res Rebis eff Vina confecta.

In this mixture there are two Natures, the one more active, which is the Mercury, the other more paffive, which is Gold: where note, that the activity of the Mercury above the Gold, is because the moving virtue of Sol is fealed, that is, his Sulphur is imprisoned. Otherwife when Diffolution is made, Sol then is most active, and Mercury more passive; Mercury then is as it were the Feminine Sperm, which being more crude and tender, it is fooner wrought upon by the Fire, which Sol the Masculine Sperm feels not till it be penetrated by the Mercury, T 2 and

12

and then it is forced to fend forth its Seed ; for the formal principle refides mostly in the Gold, and the material chiefly in the Water; in the one, being thick of constitution, the formal part is fealed; in the other, that little which is, (in respect of the Body) is more at liberty, and fo by confequence fooner active. These two then must be mixed (ad justam exigentiam natura) as is elsewhere hinted and profecuted largely. To this if thou hast attended, thou shalt know the extent and full Latitude of this Conjunction ; this is a manual work, and the last manual work, next to the putting and fealing of it in the Egg, that thou haft, before thou haft attained the first degree of the Mastery.

The fecond manner is called Triptative, Which is a Conjunction of things three, Of Body, Soul and Spirit, that they not ftrive, Which Trinity thon must bring to Unity.

THe next Conjunction that follows this in order, is when thou haft fo administred

nistred and regulated thy Fire, that thy Spirits shall fo afcend and circulate, until they have extracted out of the fixed Body its most digested virtue, or subtle Soul, which is Sulphureous, or of great Firiness. Then shall the Spirit and Soul descend, and shall unite it felf with the Body; then shall the Air be converted into Duft, according to the process of noble Sandivogius, where they shall lye contumulate for fix weeks without breath; and after when the Spirit of life shall enter into them, the Spirit and Soul shall by their mighty force carry aloft the Body with them, fo that it shall go out and return with them, for now these three are made one.

For as the Soul to the Spirit the bond must be, Right so the Body the Soul to him must knit. Out of thy mind let not this Lesson flit.

S O then by the mediation of the Soul, the Spirit is made one, and incorporate with the Body; for the Soul being by the Spirit drawn from the Body, doth T 3 natu-

naturally defire to be united with it again, and folong as it is from it, is from home as it were in a Pilgrimage. The Body alfo naturally doth defire its Soul, and will as forcibly attract it as a Loadftone doth attract Iron: for know, that the Soul doth not afcend, but it carries with it a fermental Odour of the Body, by which it doth fo effectually affect the Spirit, that it begins to think of taking a new impreffion, and becomes daily by little and little more and more able to fuffer Fire, and by confequence draws to the nature of a Body: obferve this.

The third manner, and also the last of all, Four Elements together which joyns to abide,

Tetraptative certainly Philosophers do it call,

And specially Guido de Montanor, whose fame goeth wide,

And therefore in most landable manner this tide.

B Ut yet this Conjunction doth not retain the volatility of the Compound, though

though it is fo united that the parts afcend and defcend together; the reafon is, that though by the Soul the Spirit and Body be united, yet the Spirit fometimes doth carry the Body with it aloft, and the Body at times precipitates the Spirit, the Soul holding fait together, till at length not only these parts, but the Elemental qualities of them, are fo ftrongly permixt, that the one doth not more in acting; then the other doth in resisting, by which means they are not only united to follow one another, but fixt to abide Fire together.

This is the last and noblest Conjunction, in which all the mysteries of this Microcosm have their Consummation. This is by the Wife called their Tetraptive Conjunction, wherein the Quadrangle is reduced to a Circle, in the which there is neither beginning nor end. He who hath arrived here, may fit down at Banquet with the Sun and Meon.

This is the fo highly commended Stone of the Wife, which is without all fear of corruption; for here are by Nature all T4 Ele294 An Exposition upon Elements Anatically mixed and united, so that it cannot suffer from any, for it agrees with all.

In our Conjunction four Elements must aggregate In due proportion, which first asunder were separate.

These our Elements are not such vain trifles, which are idly imagined by Sophisters; by the primary qualities, to speak after the common phrase, though I do not think that any thing attains perfection upon an account of qualities, but so it pleased the Ancients to express themselves; only this is most certain, that what was before inconstant in the Fire, now is impatible therein, and what at first in the beginning of the Work discovered two distinct Natures, is now one intirely and inseparably.

There-

H

I,

Remember now that the more thy Water is, the more ought to be thy Internal Fire to dry it up; fo then when thou shalt make the proportion of Water to the Sun three to one, remember that thy number of Eagles, which is the proportion of thy Mercury, ought to be nine, or at most ten.

This is the highest Acuation of the Water, which is belt for luch a proportion; as for feven Eagles, two to one is a very good proportion, fo haft thou proportionably three Eagles to every one of the Water which is added to the Body. Some are fo acute as to fay, that with four Eagles well cleansed, the Work may be performed, and then the proportion must be as three of the Water to two of the Body, but the decoction must needs be longer. I never yet tryed it, knowing the forenamed proportions will do far better, and nine months time is a fufficient waiting for a Philosopher. Any fhorter way is and would be acceptable, but more tedious are very unacceptable,

Sir G. Ripley's fourth Gate. 297 ble, fince they flew nothing more than quicker ways, but protract the time of Putrefaction; for from that time the Fire of Nature is at work, and then every pondus hath the fame period, provided the Fire be accordingly, and the Matter in the Glafs not much over the other, for one ounce or two will be far fooner accomplified, than five or fix ounces; therefore we advife all rather to content themfelves with one ounce, or two at most: if an ounce fucceed, you can with no more.

This Chapter I will conclude right foan therefore,
Großs Conjunction charging thee to make but one,
For feldom have Strumpets Children ylore,
And fo shalt thou never come by our Stone,
Without thou let the Woman lig alone;
That after she have once conceived by the Man,
Her Matrix be shut up from all other than.

I Shall foon draw to an end concerning this fubject, for I trow that thou underftandeft

P

W

F

0

Th

Th

I

tie

298

ftandeft it fully; take heed then to my Doctrine, mix thy Water with thy Body in a due quantity, and grind them together diligently, and when thou haft mixed them, fhut them up in thy Glass carefully, and there let them ftand till compleat perfection.

And after thou halt mixed them, and fet them to heat, be fure thou ftir them not, much less open them, or add any thing to them, or take ought from them, whatever any Author do feem to advise : For if thou do contrary to this my Do-Arine, thou doft run an extreme hazard of losing all; for as it is with Harlots, who lying with many men, conceive rarely of any: fo if thou joyn crude Mercury after thy first Conjunction, I will not fay that it is impossible, but very unlikely that ever thou shalt attain our Maftery: And what I fay of putting in fresh Mercury, is to be underftood of the Body allo, for if thou shalt add fresh of that, thou wilt deftroy all ; for after thou fetteft them to the Fire, thou must expect Conception, that is, that the Mercury by ascending and descending will extract part

Sir G. Ripley's fourth Gate. 299

part of the feminal virtue out of the reins of the Sun, which when the hath done, there then ftands a relation between the Sun and that Mercury, as between Husband and Wife. Now other Mercury, or other Sol are not as yet fo related, and therefore they are as a third perfon, which Love abhors. Therefore mix thy Matters fo judicioufly at first, that thou need not afterwards to with for any new addition, and close your Veffel well, and decoct it carefully.

For fuch as evermore add crude to crude, Opening their Vessel, letting their Matters keel, The Sperm conceived they nourish not, but delude Themselves, and spill their Work each deal; If therefore thou have list to do weel, Close up thy Matrix, and nourish thy Seed With heat continual and temperate, if thou wilt speed.

T Hey who shall do otherwise, as they discover themselves to be too impatient, so they certainly will destroy their Opera-

Operations. For were it no other damage their this, that they cool their Seed, it is an irreparable errour; but over and belides, the crude Air, will they, nill they, will get in, and being as it is a great enemy to Generation, it deftroys the germinative and living virtue.

Then inftead of getting profit, they reap certain lofs; and inftead of attaining truth, they get a delution: for no man that understands himfelf would do it, but he that would open a womans Womb that is conceived, to make her bring forth fooner, or crack an Egg he would fet under a Hen, to make it hatch more fpeedily.

Therefore as Indvifed before, fo I do now, and fhall make it the *Fpiphonema* of this difcourfe; mix thy Seeds, and elaborate them with what pains thou canft, then fast them in a houfe of Glafs, that is to fay, an ounce in a Glafs that would hold about 16 ounces, or 20, or two ounces in a Glafs that would hold two ounces in a Glafs that would hold two ounces or the reabouts of Water difidded; fet thy Glafs in thy Neft, about a 4th part of it in Sand, which mult be fifted from Sir G. Ripley's fourth Gate. 301 from Stones. Let the Neck be falled either with a Wyre, or fet into a hole which may be in the Cover of thy Neft, the Neck about 6 inches long, or longer a little. Let thy Athanor be fo that thou mayft give in it what heat thou pleafeft, and keep it about a day, or 16 or 12 hours at leaft, without renewing, and yet no tenfible alteration in heat.

ł

8

0

In this Furnace thou shalt give thy Matter fuch a Fire, as may within the first day or two cause it to boyl, like to a Pot over the Fire, or as the ftormy Sea fwelleth in a mighty Wind; from the furface of which there will exhale a Vapour which we call the Winds, which are in the belly or womb in the forming of our Embrio, which will condense at the top, (the Glass being strong) and run down in drops, and this continually night and day without ceafing. Thus is verified the faying of the Philosopher, that our Stone retaineth life, and is perfected, that is, divided and united, and at last fixt and congealed, by continual boyling and fubliming. Thus are thy Waters divided, the uppermost part carry aloft the

the Soul with them, and the lowermost boyl and tear and soften the Body, and make it more fit for the returning Spirit and Soul to work on, in their continual descending.

Now thou haft an intimate union between the moift and the dry, that one is paffed into another, and of two there is a third made, which is a Neuter from both, and yet partakes of both ; and thefe two Natures that did feem fo oppofite, are now confpired together to make one fubftance incorruptible.

For the Water which is a Spirit, hath given such an impretion to the Earth, that it which was corporal and dry, and uncapable of communicating Tincture,

Sir G. Ripley's fourth Gate. 305 is by it become penetrative, fo that it can in the very twinkling of an eye pass to the very Centre, upon an imperfect Metal on which it is project, as I have oft with an unspeakable content obferved.

For it is not in our union of this Sulphur to its Mercury, as it is with the union of Water to Earth, though we make fuch comparifons; for though we call our Sulphur Earth, and our Mercury Water, yet our Mercury will not in the Examen of the Fire flow away as Water will exhale from Loam, how exquilitely foever it be contempered with it.

So then our Body which by our Art is renewed, is advanced into the order of Spirits, or Bodies glorified, which though they have Bodies, yet they are not fubject to those Laws of gross corporeity, which is in Bodies not regenerate : therefore our Stone is a System of Wonders, ponderous, fixt, and exquisitely compact, and yet as penetrative as hot Oyl is into foaking Paper.

So that it is not now as it was at first beginning of Operation, when the one U 2 was

206

was above, the other below, compared to two Dragons or Birds, the one winged, the other without wings; but now both are capable to refift the Fire in its utmoft fury.

Now hath the Water received a fermental impression from the Earth or Sulphur, so that it is now made Sulphur with Sulphur, as the other is made by the Water life with life.

This is the higheft perfection which any fublunary Body can be brought to, by which we know that God is one, for God is perfection; to which when ever any creature arrives, in its kind it rejoyceth in unity, in which is no division or alterity, but peace and reft without contention.

Thus in two things all our intents do hirg, In moist and dry, which be contraries two; In dry, that it the moist to fixing bring; In moist, that it give Liquefaction to the Earth also.

W Hatever then we feem to fay or write to the contrary, all our intentional Secret Sir G. Ripley's fourth Gate. 307 Secret confifts only in two things; whatever we feem to advife more, is but only to intangle the unwary:

Our first Secret is to know our true Sulphur, which many do allegorize to all the absurdities in the World : This is Gold, which is to be bought pure almost in any place.

The next is to know our Mercury, which is not common, but artificial, drawn from three heads by the mediation of one thing, which makes the two which are dry and Sulphurous, to unite with one which is moift and Mercurial. These are different in their qualities, which difference our decoction fo reconciles, as to make of them fweet Harmony. For the Sulphur in whole increase of virtue confilts our final intent, it doth give confistence to the Water, yet so as that it doth not part with it from it felf, but with its Fermentative virtue it doth fo infuse it, that of a moist Spirit tender and volatile, it becomes a fixt dry Fire-abiding substance.

But first of all the Water doth mollifie the Body, and soak into it, and search U 3 out

out its profundity; for the Sun teyneth not, till it teyned be, for hard and dry Bodies cannot enter fo as to transmute, till fuch time as themselves be first Radically entred, and changed from colour to colour, till they come to perfection; then it is fluid and penetrative, for it will enter to the root of the imperfect, and cause it to lose its imperfection, and become perfect, flowing upon it like Wax when it is heated by the Fire. 1

ít

W

A

W

al

Then of them thus a temperament may forth go, A temperament not fo thick as the Body is, Neither fo thin as Water withonten mifs."

Cherry as a start of the start of the

BEtween the dry Body and the fluid Water, we make a temperament which is called Impaftation, for it is made like unto Pafte; and Inceration, for it brings it to the temper of Wax; but most properly Amalgamation, or gross Comjunction, which is a middle confistence between Mercury, and a Metal not so hard as the one, for it may with a Knife for ones Finger be spread to and fro easily;

Sir G. Ripley's fourth Gate. 309 ly; nor yet is it fo currant as Mercury, for no Mercury will run out of it, though it be inclined one way or other. I need fay no more, for there is hardly any vul gar Chymilt who is not acquainted with the notion of an Amalgama, and knows what temper that is, when it will fpread like Butter, and yet laid declining, will let nothing run from it which is thinner then the whole Compound; for in a thm Amalgama, the Mercury if it be declined will run to the declining fide, like Hydropical intercutis Water. But ours is not fo thin, and yet fo foft that it is eafily plyable, yet fo that it may be rouled up in Balls, and no quick Mercury run down or fink to the bottom. He that can mils in this direction, would hardly find the fhining Sun at Noon-day.

upon the Fifth Gate,

Which is **PUTREFACTION**.

The Fifth Gate Opened, Which is PUTREFACTION.

Now we begin the Chapter of Putrefaction, Without which Pole no Seed can multiply, Which must be done only by continual action Of heat in the Body, moist not manually; For Bodies else may not be altered naturally.

E have already run through four Gates, the first being opened, the rest stand open at will; so that thou hast need only to enter. The course and method of Philosophers now doth lead us to the Gate of Putrefaction, a horrible Gate, whose entrance is dark with *Cimmerian* night, dreadful with many windings and turnings.

And yet it is a Gate fo neceffary, that unlefs you pass through it, you may never expect to reap fruit from your la-X 2 bour 3

: 322

bour ; for without it can be no Life nor Generation, much less defired Multiplication: therefore faith the Poet,

Felices atrum quotquot habere queant.

The cause of this death, or corruption or rottenness, proceeds from the action of continual heat, not fo much of the external Fire of the Athanor, as of the Compound within it felf; in which the Fire of the Water which is against Nature, doth open the perfect Body by continual contrition and decoction, and fo lets loofe its Sulphur that was incarcerate, which is Fire of Nature, that fo between thefe two in continual action and paffion, together with the external heat continually acting, the whole Compound is brought to corruption, being fometimes roafted with external heat, which doth fublime the moilture, which again of its own accord returns continually, and doth moisten the Earth so long, until by reason of the heat it have drunk up the . moisture wholly, and then it dyes.

And unless thou see this sign, of rotting of thy Compound, which is done

in

1

11

Sir G. Ripley's filib Gate. 323

in a black colour, a ftinking odour, and with a difcontinuity of parts, thy labour will ftill be in vain; for thou mayft never expect what thou defirett, to have a new form brought in, till the old form be corrupted and put off.

Right fo we, fo long as our Material principles continue in their own nature and form, they are but of a fingle value, for Gold and Mercury are two fuch principles, that they will for ever delude as many as proceed to work on them in a Sophiftical way; for whatever the Artift may think, they will remain the fame unto the end of the World, unless pure Sol being mixed with its own pure and appropriated Mercury, and fet in a due heat of digestion, there arise a mutual action and paffion between them, which without the laying on of the Artifts hands, will tend to a new Generation. For in a convenient Fire, in which the Compound may perpetually and unceffantly boyl, and the fubtle parts may afcend and circulate upon the groß without intermiffion, the most digested Virtue or Soul of the fixed Body, (which is his basis of Tincture) will be extracted by the Water, and this will mix it felf with

Sir G. Ripley's fifth Gate. 325

with the pure Spirit of the Water, and with this it will afcend and return, until a total separation be made of the pure from the impure, and the fubtle from the gross.

Ĉ

e

2

AL.

6

e

1.

Then shall the Body draw down its Soul again, and by the power of the most High it shall be united, and with it the Spirit of life shall be joyned alfo, so that all three shall become one with an union indiffolvable; but all this pre-fupposeth a Putrefaction, or Corruption of one form, else cannot there be an Introduction of another.

Therefore fince this mystery of Putrefaction is not more fecret then neceffary, fo neceffary that without it there is nothing can be done to purpofe, that is to fay, with profit; I shall be a little plain and full in the profecution of this mystery: For in the knowledge of this confilts all that is required to make a Philosopher. All the intentions of the Artift, must be only so to prepare and order things, that he may be fure of this terminus; and when he is there come, he is as fure a Master as if he had the Stone in X4

in his Cabinet. By the failing of this fign, the Operator is always to turn either backward to feck out fome other principles, or forward, or to the right hand, or to the left; but when he is Mafter of this, he then can fail in nothing but in the Regimen of the outward heat.

And Putrefaction may thus defined be, After Philosophers definition to be of Bodies the flaying,

And in our Compound a division of things three, the contract and the

The killed Bodies into Corruption forth leading,

And after unto Regeneration them ableing; For things being in the Earth, without doubt Be engendred of Rotation of the Heavens about.

THe definition that the Philosophers give of this Operation, is perpetually Allegorical, for this Gate they have named by all Metaphors almost in the World, especially from death, and dead men: therefore they allegorize the Vessel in this station, to Grave, or Tomb, and embleSir G. Ripley's fifth Gate. 327. emblematically difcover this Operation by the types of Skuls, dead Bones, and rotten Carcaffes; according to which Metaphors they call Putrefaction, the death of the Compound.

For when they faw the Body with the Water to melt in the Fire, to flow and to boyl, they called this Magnefia; when they faw the Water partly to alcend, and partly to defcend, and partly to remain below, fo that at once there was both a Sublimation in vapour, and a Motion of what was below, they faid that it was the Spirit of the Water that alcended, or more Airy part; and the more Fiery part, which rejoyceth most to be united to, and hidden in Earth, remained below, for that was more capable of the Fire, and did better agree with it, as with its like : which because it did so uncesfantly fwell and boyl, and rage at the bottom, and make the Body begin to change its colour, they faid it was Fire against Nature. Again, when they faw the afcending Vapour to change colour, they faid it was the Soul of the Bodies was mixed with the Spirit, which becaule İt

th

E

it was green, they faid it was a vegetative Soul, and Fire of Nature.

Now when the Body below began to thicken, they faid this was an Hermaphroditical Body, because part of the Water always remained below, and made the Body to boyl, and bubble, and flow; and therefore this they called a new Body compounded of two Bodies, the Sun and the Moon, the Man and the Wife, which because it grew to a slimy consistence, they named it Limus, or Limbus, Hyle, and a Chaos, or Terra Adamica.

When this Body began to grow very black, and to fend up foul Exhalations, yellowifh, blewifh, and black, they faid this was Death and Corruption, which followed the feparation of the Soul from the Body.

Now when they fee the Souls to be again united, and to remain below together, they knew that the Soul and Spirit were Immortal, that is, the Tincture or Vital Balfam was Incorruptible; and becaufe they fee them again unite, they knew the Soul and Spirit would renew the

Sir G. Ripley's fifth Gate. 329 the Bodies, and this feeming Corruption, was but the natural step to a glorious Regeneration ; for if the Souls be again united to the Bodies, they will furely regenerate them, and renew them, and make them incorruptible; for if the Spirits had not returned to this union. they might only have expected the Exhalation of them : for Spiritual Tinctures or Effences, cannot be deftroyed by corruption in many Vegetals, much lefs in the most perfect of Minerals and Metals. The union then of the Souls with the Bodies, argues evidently a hidden purity, under the apparent rottenness, which will after Purification be exalted to transcendent Glory.

Ve .

2-

be.

ev

W

Hereupon they faid, that the Spirit and Soul which were above, were the Heavenly Quinteffence, and the Body below was the Earth; and this Circulation of Spirits, were but as the Circulation of the Heavens round about the Earth; and the falling drops, were but as the influential dew, which did caufe the Earth to fructifie; and the blacknefs and darknefs, were but the Winter Latitude, which

which with its Clouds and droppings do mellow and fertilize the Earth, to fhoot forth with the more beautiful varieties in the Spring.

And therefore like as I have faid before, Thine Elements commixt and wifely coequate,

Thon keep in temperate heat, eschewing evermore

That they by violent heat be not incinerate, To powder dry unprofitably Rubificate : Put into powder black as the Crows Bill, With heat of our Bath, or elfe of our Dangbill."

F Or this caufe they looked upon this as a fectet, myfterious, yet very natural Operation, whereby the moft folid and perfect Minerals, are by Nature fo applied one to another, and cultivated, that the very Earth or Ground fhould be found, in which this noble Tree of the *Hefperir* des may be planted and grow; the Matrix or Womb fhould be prepared, in which this noble Off-fpring may again enter, and be born again.

There-

Sir G. Ripley's fifth Gate. 331 Therefore what by long Experience, and profound Meditation, Philosophers have found out and feen, that also they committed and communicated unto us ; fo that we also are made fellow Heirs of this great Treasure, and we shall as faithfully communicate our knowledge for thy Instruction. First then, take thy Body which is Gold, and thy Water which is Mercury, the one ready made by Nature to thy hand, the other thou must Prepare, for it is not to be found in the Land of the Living, but must be made : Nature here is at a non-plus, and fo is Art, taken afunder, but both together effect it.

•

2

Mix these together in due proportion, fo as I have often told thee; then set them to the Fire to decost, and give them a convenient heat, in which they may boyl, ascend and descend perpetually, without any intermission night or day.

But especially and before all things be careful in your Internal heat, to wit, the proportion of your Water for your Sulphur; that you must add and supply to it

it in the beginning of your Work, in its Preparation, is that which doth perform all the work within, without which your External heat is of no value, for it is of it felf uneffectual.

57

F

If then thou accend this heat fo much as that it predominate, it will not then diffolve the Bodies, as thou expecteft, but contrarywife burn the Flowers before they are extracted from the depth of their Marrow : this thou mayft eafily do, either if thy Armick be not made as it ought, or elfe the number of Eagles exceeded, or the proportion of thy Water to thy Body not agreeing to the number of Eagles, or thy Glass not well proportioned to thy Matter ; it will easily burn, if thy Glass be too big, for fo. the moisture will fo much be dispersed about the Concave, that it will not return before the Earth below be left too dry. I have given Rules eafily to avoid all these inconveniences.

And on the other hand, be fure that thou do not erre in too little heat; let thy Water have Fire enough within it, to make a true division and corruption, which Sir G. Ripley's fifth Gate. 333 which if either thy Arfnick have not fufficient Fiery virtue, or if the union of this and thy Water be not well attended, but flightly performed, or the Purgation of thy Water be not throughly made each Eagle, for fo two or three Eagles may not add the virtue of one, or if thy number of Eagles be not juft, or thy proportion of quantity be not duly obferved.

ŋ

4

Therefore follow my advice, and be careful in both thefe particulars, and then let your External heat be fo that your Compound may boyl and fublime, which for its fimilitude is called a *Bal*neum, fo long till the Vapours ceafe, and are retained within ; then will the Compound rot, which for its great likenefs is called our Dunghill.

Until the time that Nights be paffed ninety, In moist heat keep them for any thing, Soon after by blackness thou shalt espy, That they draw fast to putrefying.

F Inft then, our Operations begin in bumido, for in the beginning moisture it pre-

t

234

prevails, and is called the Phlegmatick Conftitution of our *Embrio*; and this is called the Reign of the Woman, which (according to *Flammel*) feeks to get the Domination for many months, that is to fay, for three months or thereabouts, which according to our Author is ninety days and nights, to whom many other Authors agree. This time may be longer or fhorter, according to the better or worfe preparation of the Matter, and the Regimen of the Fire.

But when thou halt fet thy Glafs once, in the first place be fure that thou give a due, yet temperate heat; govern it fo as that between the Waters above, and the Flouds beneath, the Earth may liquefie; then continue your decoction, and the Veffel shall be beclouded, and thy Compound shall with constant Circulation become black.

This colour shall be a fign unto you that you have not run your course in vain; this is the first Gate, into which and through which you must enter; now know for certain that thy Seeds begin to rot and engender. In this Putrefaction there Sir G. Ripley's fifth Gate. 335 there is life, for this Operation is nothing elfe but an extracting of Natures from their profundity or root; this is that which will make thy fixt Body to become a volatile Spirit, for Putrefaction doth loofe the bands of all the Elements.

18

10

re

Which after many colours thou mayst bring To perfect whiteness, by patience easily, And so the Seed in his nature shall multiply.

SO foon then as thou thalt have blacknefs compleat, know for certain that in this blacknefs whitenefs is really hidden, fo really as a living Plant in its Seed. But before thou attain to this whitenefs, thou mayft have patience, and pafs through many middle changable colours, which will be no fmall chearing to the Work-man, who muft wait with a great deal of Longanimity until the Earth and Heaven be united.

Then fhall thy Elements perfectly accord, and one colour fhall cover thy new-married Soul and Body, and that will be like to the most pure Lilly, or Y sub-

fublimed Salt, sparkling like to a newflipped Sword in the Sun beams.

336

In this whiteness is the Multiplicative virtue exalted, and made apparent in its first degree; by this white Soul thou mayst turn either *Mercury*, or *Saturn*, or *Jupiter*, or *Venus*, or *Mars*, into most pure refined Silver, in a short time, and that not Sophistically, to apparency, but in reality, inwardly and outwardly to abide all Essages.

Make each the other to halfe and kifs, And like as Children play them up and down, B

And when their Shirts are filled with Pifs, Then let the Woman to wash he bown, Which oft for faintness will fall in a swonn, And die at last with her Children all, And go to Purgatory to wash their filth Original.

But in thy first Operation, as is said before, first look for blackness, which will appear in the first Regimen by continual decoction, which blackness shall be an *Indicium* to you that your two Natures Sir G. Ripley's fifth Gate. 337 Natures do begin now to imbrace and kifs one another.

For so soon as they feel the Fire, they flow together within the Veffel, and boyl by continuance of decoction vilibly, and the tender Nature not enduring the heat, flyeth aloft, and being inclosed to that it cannot get out, it congeals in drops in the head of the Veffel, and about the fides, and again returns to its Body, which may well be called Childrens play, running round as it were in a Circular motion: This play continues fo long, till the Water begins to leave its thicker parts, with the thicker parts of the Body, which in the bottom of the Veffel is called Urina puerorum; and the thinner parts of the Water, mixed with the thinner parts of the Body, which is diffolved in it, flies still and circulates until it have made a more full diffolution of the Body, which here by the odour of its Sulphur doth penetrate the Spirit and Soul, and makes them faint at laft, and remain as it were breathless in the bottom of the Glass.

Then shall the Body be destroyed, and Y a both

5

both the Water and it rot into fmall Atoms, which will lie without motion, growing every day more and more black, until at length *Cimmerian* darkness cover the whole Sky.

1

e

te

S

ſ

er

This is called the North Latitude of our Stone, and it is Winter, cold and dirty; here are the Elements brought to reft for a time, until a Generation be made in the bottom of the Glass, when through the will and power of God, a clean thing shall be brought out of this uncleanness and black venenosity.

When they be there, by little & little increase Their pains with heat aye more and more, The Fire from them let never cease, And see that thy Furnace be surely apt there-Which wise men call an Athanor: (fore, Concerning heat required most temperately, By which thy Matter doth kindly putrefie.

Now thy Bath will begin to be a little more heated and ftirred up, to wash this young King, which though noble, is yet conceived in a Stable; for at this time thou hast the Sulphur of thy diffolved

Sir G. Ripley's fifth Gate. 239 ved Body let loofe, which mixing with the Sulphur of the Water, doth acuate it exceedingly; the one being a natural, the other a Fire against Nature, both together make an unnatural Fire, burning like to the Fire of Hell, comparable to nothing but the Alcaheft.

Nor must thou think that this increase of Fire confifts in the blowing of the Coal, no verily, it is a more fubtle internal Fire that we have, and yet that also must be kept constant, and in due order.

For this cause see that thy Furnace be trufty, else thou mayst and wilt fail; for though the Fire of Coals do not effect any thing, yet it excites, and the Water though it be of a wonderfull nature, yet it acts no farther then it is ftirred up, and intermiffion in this Work when it is once begun, will in the end prove fatal extinction:

Therefore the Wife men have named the Furnace in which they work their Secrets, an Athanor, that is, Immortal, fhewing that from the beginning to the end the Fire must not go out, for the ex-

¥ 2

extinction of it deftroys the Work; and as death includes all fickneffes, which are fteps to it, fo an Immortal Furnace or Athanor, must not only preferve the Fire from going out, but also from exorbitancy either on one hand or other; for whatever fwerves from the temperate mean, hinders the kind operation of the Matter, which is Putrefaction, by which means the Work is notably retarded and weakned, and by continuance of any extremity it will be destroyed, but with its due heat it doth putrefie kindly.

Of this principle speaketh sapient Guido, And saith by rotting dyeth the Compound corporal,

And then after Morien and others moe, Up rifeth again regenerate, simple and spiritual.

And were not heat and moisture continual, Sperm in the Womb might have none abiding,

And so there should no fruit thereof up spring.

THis according to the intention of all Philosophers, Guido, Turba, Arnaldus,

Sir G. Ripley's fifth Gate. 341

dus, and others, but especially noble Trevifan, whom I chiefly honour; fo Flammel, Artephius, Morien, and all Philofophers teltifie thus much, namely, that the heat must be so adequated to the Compound, as that in it the Body, through the Pontick virtue of the Water, may have its Sulphur let loofe, and fo thefe two Sulphurs mixing together, may bring the whole to rotting or Putrefaction.

By which putridness a Ferment is engendred, which as it doth volatize all things naturally, fo it doth quicken this groß dead Body, in fo much that it mounts aloft upon the Fire with the Water, and rifeth a new glorious Body mixed with the Water, fo that both being become one together, the Spirit borrows from the Body permanency, and the Body from the Spirit obtaineth penetrativeness, so that both make one cœleftial and terrestrial Compound, named the Regenerate Body and Stone of Paradife incombustible. All which is occafioned by the continuance and not failing of heat, both inwardly and outward. ly Y 4

15.

ly, by which the moifture is circulated and depurated, without which the feminal virtue would be extinct, which only vegetates by heat and moifture.

t

b

And if once the feminal virtue were kill'd, the remaining Compound would be no better then a dead unprofitable thing, which could never be recovered ; fo that if either moifture or heat within, or convenient heat without fhould fail, there is nothing to be expected, but according to the Poet, the set

Cunct a ruent, que non nlla reparaveris Arte:

Therefore at the beginning our Stone thou take,

And bury each in other with their Grave, Then equal between them a marriage make, To lig together fix weeks let them have. Their Seed conceived, kindly nourifh and fave,

From the ground of their Grave not rising the while,

Which fecret point doth many one beguile.

THis then is the process of our Work; take, at, the first our Stone, that is, the

Sir G. Ripley's fifth Gate. 343 the true Material principles thereof, which are one in kind, and two in number : mix these together in a due proportion, then shalt thou see as follows. First, thy Feminine nature will so embrace thy Masculine, as to extract from him his Seed, that is, the most digested virtue, so shall the Body dye, and the Water shall intomb it.

The Water by Cohabitation fhall contract amity and friendship with the Body, for it is nothing else but a Feminine Body of the same Stock, which when they are united and joyned, this is called the Marriage of *Gabritius* with Beya.

Then shall the Vapours cease, and all Exhalations shall be withheld from ascending or descending during the space of 40 days, or 42 at most, in which time though thou see not the former Circulation, rejoyce, for now the Body begins to retain his Soul in a black colour.

Now the Queen hath conceived the Kingly Seed, which must be nourished with gentle convenient Fire, till it wax ftrong,

e

ftrong, and become a puillant triumphant Champion, whom no Earthly force is able to withstand.

344

Thou must of neceffity then let them have this prefixed time for their folitude and retirement, in which time the fixt and the volatile, the cold and the moist, the hot and the dry, do learn to agree each with other, being reconciled in this Head of the Crow, which is the conversion of Natures into a difcontinuous Calx, finer then Atoms of the Sun-

This Operation as it is the Wyld and Labyrinth of all who feek this Art in vain, fo it is the Capo di Bona Esperanza to as many as attain to the perfect fight hereof 5 for now most of the difficulties are passed, which they are like to meet withall in this their Voyage to the Oriental Indies.

the first

Sir G. Ripley's fifth Gate. 345

This time of Conception with easile heat abide.

The blackness appearing shall tell thee when they die,

For they together like liquid Pitch that tide Shall fivell and bubble, fettle and putrefie; Shining colours therein thou fhalt effy, Like to the Rainbow, marvellous to fight, The Water then beginneth to dry upright.

T Hou must then be very carefull that thy over-heat do not now hinder their Conjunction, for now is the main fear of burning thy Flowers, which thou mayst easily do, and make these Natures become a half Red, or Orange colour, instread of the true Crows Bill.

Whereas if thy external heat be fo gentle, as not to extinguish motion, thou shalt find that in this period thy Natures shall both of them die together, for one is not killed, nor dieth without the other ; which death in its approach thou shalt discover by the appearing blackness.

And when once the Crow shall begin to shew it felf, know that thou shalt fee

L

346 An Exposition upon a terrible day, for thou must expect to be in the heat of the shore, and in the storm of the inraged Sea, which now the Winds are abated, after a long and strong blowing of them, doth arise in waves, raging and taking on, and raising the filth from the very bottom, so that all becomes like to a troubled Glass of Ink, or melting boiling Pitch.

After this blackness, which shall endure for a long and tedious time, thou fhalt fee various and glorious colours to fucceed, fuch as thou never haft feen; for all the colours that the mind of Man poffibly can imagine, shall then present themselves to view, which shall be an evident token to thee, that the moilt and dark Dominion of the Woman doth now begin to vanish, and instead thereof the Man beginneth to rule, who first dryeth up the moilture of the Woman, with which there will vanish blackness, and the changable colours, and after all shall be fixed in a sparkling dry white Powder, which is the Stone of Paradife.

Sir G. Ripley's fifth Gate. 347

For in moist Bodies heat working temperate.

10

C

16

]-

Engendreth blackness first of all, which is Of kindly Conjunction the token assignate, And of true, putrefying; remember this, For then perfectly to alter thou canst not miss. And thus by the Gate of blackness thou must come in

To the light of Paradife in whiteness, if thon wilt win.

IN the beginning therefore of our Work, through the Co-operation of heat both internal and external, and the moifture of the Matter concurring, our Body gives a blackness like unto Pitch, which for the most part happens in 40, or at the most in 50 days.

This colour difcovers plainly that the two Natures are united, and if they are united, they will certainly operate one upon another, and alter and change each other from thing to thing, and from ftate to ftate, until all come to one Nature and fubftance Regenerate, which is a new Heavenly Body.

But

But before there can be this Renovation, the Old man neceffarily must be destroyed, that is, thy first Body must rot and be corrupted, and lose its form, that it may have it repaid with a new form, which is a thousand times more noble. So then our Work is not a forced and apparent, but a natural and radical Operation, in which our Natures are altered perfectly, in so much that the one and the other having fully lost what they were before, yet without change of kind, they become a third thing, Homogeneal to both the former.

Thus they who fow in tears, shall reap in joy; and he who goeth forth mourning, and carrying precious Seed, shall return with an abundance of increase, with their hands filled with sheaves, and their mouths with the praises of the Lord : thus the chosen or redeemed of the Lord shall return with Songs, and everlass Joy shall be upon their heads, and sighing and forrows shall fly away.

On Earth which were a hundred days continuate

And fifty, away ere all these Waters goed; Right so our Waters, as Wise men understood,

Shall pass, that thou with David may say, Abicrunt in ficco flumina; bear this away.

R Emember then this Chymical Maxim, namely, that a fad cloudy morning, begins a fair day, and a chearfull noontide; for our Work is properly to be compared to a day, in which the morning is dark and cloudy, fo that the Sunappears not.

After that, the Sky is over-clouded, and the Air cold with Northerly winds, and much Kain falls, which endures for its feafon; but after that, the Sun breaks out, and fhines hotter and hotter, till all become dry, and then at Noon-day not a Cloud appearing, but all clear from one end of the Heaven to the other.

But

But our Waters may more fitly be compared to Noah's Floud, or Deluge, then to a day-fhowr, by reafon of their continuance; for before our Waters fhall all be overcome, and dried up by prevailing ficcity, it will be about 5 months, in which time the Artift fhall be held in conftant horrour, according as the Allegory of Arifleus hath it;

Sed ne pæniteat faciem fuligine pingi, Adferet hæc Phæbi nigra favilla jubar.

Wait patiently, for thou fhalt fee the Day-ftar arifing with deliverance, and thefe Waters fhall through the command of the Almighty abate; *Jupiter* then fhall rule, in whole reign all things fhall be reftored: for by conftant decoction, thy Body fhall have virtue to receive Tincture, and to retain it, and to increase it, by which it fhall be renewed, and fhall by little and little digeft all the moifture, which then fhall be unto it as nourifhment, Milk of Life, which we call Virgins Milk.

Then shalt thou have leifure to contemplate these wonders of the most High, which

Sir G. Ripley's fifth Gate. 351 which if they do not ravish and astonish thee in the beholding of them, it is because God hath not intended this Science to thee in Mercy, but in Judgment, to wit, that it should be unto thee a snare and trap, and a stumbling-block at which thou shalt stumble and fall, and never rife again. Remember then when once thou shalt see the renewing of these Natures, that with humble heart and bended knees thou praise and extoll, and magnifie that gracious God, who hath been nigh unto thee, and heard thee, and directed thine Operations, enlightned thy Judgment; for certainly flesh and bloud never taught thee this, but it was the free gift of that God who giveth to whom he pleafeth.

T

h

,

Soon after that Noah planted this Vineyard, Which Royally flourished, and brought forth Grapes anon, After which space thou shalt not be afeard:

Now as the Earth when the Waters of the Floud were abated, was as it were renewed; even fo thy Earth is Z made

made new, and the Rain-bow is to thee a fign that there shall never again happen fuch another Deluge, as thou hast now passed. Thy Earth then being renewed, behold how it is decked with an admirable green colour, which is then named the Philosophers Vineyard.

This greenness, after the perfect whiteness, is to thee a token that thy Matter hath re-attained, through the will and power of the Almighty, a new vegetative life: observe then how this Philosophical Vine doth seem to flower, and to bring forth tender green Clusters; know then that thou art now preparing for a rich Vintage.

Thy Stone hath already paffed through many hazards, and yet the danger is not quite over, although it be not great, for thy former experience may now guide thee, if rafh joy do not make thee mad.

For in like wife shall follow the flourishing of our Stone.

Onlider now that thou art in process to a new Work, and though in perfect Sir G. Ripley's fifth Gate. 353 Fect whitenefs thy Stone was incombuflible, yet in continuing it on the Fire without moving, it is now become tender again; therefore though it be not in fo great danger of Fire now as heretofore, yet immoderacy now may and will certainly fpoil all, and undo thy hopes: Govern with prudence therefore during the while that these colours fhall come and go, and be not either over-hafty, nor defpondent, but wait the end with patience.

And foon that after thirty days are gone, Thou shalt have Grapes right as Ruby red, Which is our Adrop, our Usifur, and our red Lead.

t

r

of

-

F Or in a fhort time thou fhalt find, that this green will be overcome by the Azure, and that by the pale wan colour, which will at length come to a Citrine, which Citrine fhall endure for the space of 46 days.

Then fhall the heavenly Fire defcend, and illuminate the Earth with inconceivalue Glory; the Crown of thy Labours odd \dot{Z}_2 fhall

fhall be brought unto thee, when our Sol fhall fit in the South, fhining with redness incomparable.

354

This is our Tyre, our Bafilisk, our red Poppy of the Rock, our Adrop, our Ufifur, our red Lead, our Lion devouring all things: This is our true Light, our Earth glorified; rejoyce now, for our King hath paffed from death to life, and now poffeffeth the Keys of both Death and Hell, and over him nothing now hath power.

For like as Souls after pains transitory, Be brought to Paradife where ever is jogful life;

So fhall our Stone after his darkness in Purgatory,

Be purged and joyned in Elements withouten strife.

A^S then it is with those who are Redeemed, their Old man is crucified, in which is forrow, anguish, grief, heartbreaking, and many tears; after that the New man is restored, and then is joy, shouting, clapping of hands, singing, and the Sir G. Ripley's fifth Gate. 355 the like, for the ranfomed of the Lord fhall return with Songs, and everlafting Joy fhall be on their heads : even fo it is after a fort in our Operations, for first of all our old Body dyeth, rots, and is as it were corrupted, yielding a most loathfome stink, and engendring squallid and filthy colours, and most venomous exhalations, which is as it were the Purgatory of this old Body, in which its corruption is overcome by a long and gentle decoction.

And when it once is purged, and made clean and pure, then are the Elements joyned, and are of four contraries made one perfect, perpetual, indiffolvable unity; fo that from henceforth there is nothing but concord and amity to be found in all our habitations.

8

•

And

And pass from darkness of Purgatory to light Of Paradise, in whiteness Elixir of great might.

This is a noble ftep, from Hell to Heaven; from the bottom of the Grave, to the top of Power and Glory; from obscurity in blackness, to resplendent whiteness; from the height of venenofity, to the height of Medicine. Oh Nature ! how dost thou alter things into things, casting down the high and mighty, and again exalting them being bale and lowly! Oh Death! how art thou vanquished when thy Prisoners are taken from thee, and carried to a state and place of Immortality! This is the Lords doing, and it is marvellous in our eyes.

Sir G. Ripley's fifth Gate. 357

And that thou may ft the rather to Putrefaction,

Win this example, thou take, &c. The heart of an Oak which hath of Water continual infusion ;

For though it in Water lay an hundred years and more,

1

9

D

re

16

'n

Tet shouldest thou find it sound as ever it was before.

Happy Gate of blackness, which art the paffage to this fo glorious a change! ftudy therefore, whoever applyeft thy felf to this Art, only to know this Secret; for know this, and know all, and contrarywife be ignorant of this, and be ignorant of all.

Therefore if that poffible thou mayft attain the depth of this Mystery, I shall endeavour to unfold it to thy capacity by fimilitudes and examples.

Thou knowest that if a solid piece of Wood lie in water perpetually, it will tire the patience of the most patient expecter to see it rot, for it will abide many Generations, and in the end be as Z4

found

found as when it was first laid in. Yea fome contend, that in our days Pine-Trees are dug up in their intire proportion, which have been buried ever fince the Floud, being found in fuch places in which no Histories ever mentioned that fuch Trees grew, and fo deep under ground as it is almost incredible; which certainly have layn at least many hundred years, and yet the Wood as found as any other Tree of that fort, which hath not been cut down above a year or two: fuch is the force of constant Humefaction, to prevent the ordinary corruption of Timber.

But and thou keep it fometimes wet and fometimes dry, As thou mayst fee in Timber, And so even likewise, &.c. Sometimes our Tree must with the Sun be brent.

B^{Ut} contrarywife, Timber which is kept wet fometimes, and dry fometimes, as ufually the foundations of Timber Houfes are, if not fecured by the. Mafons Sir G. Ripley's fifth Gate: 359 Mafons Art, it would tire the Houfeholders patience to fee how foon fuch Timber will rot, and molder away, and become fit for nothing; which is a thing fo well known, that the experience of every Ruftick almost can teach it him:

So refolve our Stone must be used, if thou intend to have it putrefie kindly; our Wheel for Putrefaction must go round, in a constant Elevation or Extraction of the Water or Humidity from the Body, by which Operation our Man the Sun is helped in his acting; and this Water must as constantly return to the Earth, to moisten it, by which the Woman the Moon is helped in her acting.

And then with Water we must it keel, That so to rotting we may bring it weel.

be

15

C-

For now in wet, &c.

To be shall cause it soon to putrefie, And so shall thou bring to rotting thy Gold, Intreat thy Bodies, &c. And in thy putrefying with heat be not too swift, Left in the Ashes thou seek after thy thrift.

Our Operation then, faith Morien, is nothing elfe but extracting Water from the Earth, and returning it again upon the Earth, fo long and fo often till the Earth putrefie; for by elevation of the moifture the Body is heated and dried, and by returning it again it is cooled and moiftned, by the continuation of which fucceflive Operations, it is brought to corrupt and rot, to lofe its Sir G. Ripley's fifth Gate. 361 its form, and for a feason to remain as dead.

This is the true intention and manner of our working, and there is no other manner of working that can be invented, that can give thee the effect of this our Operation; for this is the true way and means by which thy Body of Gold will be deftroyed, and no other way profitable for our Art: Proceed therefore as I have directed thee, and fwerve not either to the right hand or to the left: Take this Body which I have shewed thee, and joyn it with the Spirit which is proper to it, which the Wife men have called their Venus, or Goddels of Love. and circulate these two Natures one upon the other, until the one have conceived by the other.

But beware you urge not the Spirit too much, but remember that he is a volatile fubftance, and if he be overprovoked, he will certainly break the Veffel, and fly, and leave thee the ruines of thy Glafs for a recompence of thy over-fpeedy rafhnefs; which truft me will make thee fetch a deep Philofophical

cal figh, and fay when it is too late, I would I had been content to wait Natures time. Let the Fire then be fuch in which thy Spirit may be fo ftirred up, as to return to its Body in the Glass, and not fo irritated as to break the Veffel, and return to the Afhes or Sand of the Neft, or flick about the fides of the Cover of your Neft, or elle fly about in the Room wherein the Artift is, and lodge in his Head, and fo make it far more unconftant then it was before, by adding to his rash giddiness a Paralytical fhaking. th

the Tre

tho

me

the

ret

th

Therefore the Water out of the Earth thou draw,

And make the Soul therewith for to afcend, Then down again into the Earth it throw, That they oft-times so afcend and descend.

PRoceed therefore not as a Fool, but as a Wife man; make the Water of thy Compound to arife and circulate, fo long and often until the Soul, that is to fay, the most fubtle virtue of the Body, arife with it, circulating with the Spirit in manner of a fiery form, by which both the Sir G. Ripley's fifth Gate. 363 the Spirit and Body are enforced to change their colour and complexion: for it is this Soul of the diffolved Bodies, which is the fubject of Wonders; it is the life, and therefore quickens the dead; it is the Vegetative Soul, and therefore it makes the dead and fealed Bodies, which in their own Nature are barren, to fructifie exceedingly.

Therefore if this return unto the Earth from which it first took its flight, it will make it for to fructifie, and to increase in Tincture, and in the Earth it self will multiply as a grain of Wheat doth in the ground.

8

9

Be fure then that fo fast as thou makest thy ascension, so fast also thy descension be; this is agreeable both to Nature, and the intent of all Philosophers, especially Trevisan in his Chymical Miracle; Anthors, faith he, differ especially in the documents of the Fire, but in this all agree, that the volatile ascend not higher then it may return. This is the true temperament of the Fire.

From

From violent heat and fudden cold defend Thy Glafs, and make thy Fire fo temperate, That by the fides the Matter be not vitrificate.

T Ake diligent heed then that thou exceed not this measure, especially have a care that your Furnace be not apt to exceed, but that you may govern it at your pleasure, without uncertain increasing or flacking of heat, but that your Fire be equal and continually vaporous and boyling, for such a degree is altogether agreeable to the intention of Nature.

Whereas if thou be too hafty, with Vulcan thou art always fubject to errour 5 for even then when a different Work-man is paft fear, I mean in the fourth Operation, in which the Elements are fixed and incerated, a hafty rafh Vulcanift fhall make his Medicines to grow hard at the first, and with a stronger and continuate degree of heat, to melt into a vitrificate stubstance, without any hope of future profit.

Now

and

Sir G. Ripley's fifth Gate. 265

Now then that Vitrification is an errour which is incident in the laft Operation, as burning of the Flowers is in the firft Operation; for if in Calcination the Fire be too violent, inftead of black thou thalt have a Citrine, or half red unprofitable Calx: fo in the fourth Operation, by too violent Fire thy *Elixir* will melt being vitrified, inftead of a natural flowing or Inceration.

And be thou wife in choosing of the Matter, Meddle with no Salts, &c. But whatsoever any Worker to thee chatter, Our Sulphur and our Mercury been only in Metals, Which Oyls and Waters some men them calls, Fowls and Birds, &c. Because that Fools should never know our

j

1

ie

tĉ

2

N

Secanje that roots should never know our Stone.

IF thou hast attended well to what hath been told thee in these five Gates, thou art secure; make sure of thy true Matter, which is no small thing to know, and though we have named it, yet we have

have done it so cunningly, that if thou wilt be heedles, thou mayst sooner stumble at our Books, then at any thou ever didst read in thy life.

Meddle with nothing out of kind, whether Salts, or Sulphur, or whatever is of the like Impolition; and whatever is Alien from the perfect Metals, is reprobate in our Maftery. Be not deceived either with Receipt or Difcourfe, for we verily do not intend to deceive you, but if you will be deceived, be deceived.

Our principal know that it is but one, and that is in Metals, even those Metals which you may buy commonly, to wit, the perfectest of them : but before you can command it out of them, you must be a Master, and not a Scholar, namely as it is wisely faid in Norton;

To know to destroy their whole Composition, That some of their Components may help in conclusion.

But trult me this is not for a Tyro, nor for every one of us, unless he have the Secret from his own studies, and not

bj K is bro VO Je itr ea 15 wh is t bec WO pla

by

Sir G. Ripley's fifth Gate. 367 by Tradition from a Master or Guide. Know then that this fore-recited way is true, but involved with a thousand broileries.

y

But our way which is an easie way, and in which no man may erre, our broad way, our Linear way, we have vowed never to reveal it but in Metaphors; I being moved with pity, will hint it to you. Take that which is not yet perfect, nor yet wholly imperfect, but in a way to perfection, and out of it make what is most noble and most perfect : This you may conceive to be an easier Receipt, then to take that which is already perfect, and extract out of it what is imperfect, and then make it perfect, and after out of that perfection to draw a plusquam perfection : and yet this is true, and we have wrought it. And because it is an immense Labour for any to undertake, we describe that way; but this last discovery which I hinted in few words, is it which no man ever did for plainly lay open, nor may any make it more plain, upon pain of an Anathema.

A a

fo

In his increase shall be full opulent, And multiply his kind after thy own desire : Therefore if God vouchsafe thee to inspire, Like unto thee in Riches shall be but few.

Our Stone it is the Representative of the great World, and hath the Virtues of that great Fabrick, comprised or collected in this little System; in it is the virtue Magnetical, attractive of its like in the whole World: it is the Cœlessial Virtue, expounded universally in the whole Creation, but Epitomized in this small Map or Abridgment.

This Virtue or Power is in it felf barren, fluggifh, dead and unactive, and for this caule it remaineth without fruit; but being loofed by Art, it doth through the co-operation of Nature, produce that *Arcanum* which hath not its like in the whole World; for it doth heal the imperfections of all Creatures and Metals, taking Sir G. Ripley's fifth Gate. 369 taking away their fickness, and restoring them to perfect health.

The reward which this Maftery will bring to the Artift, is indeed ineftimable; for having it, he needs want no worldly bleffing, for wealth he need take no care, and from all frailties of Body he hath a most fure Antidote.

Pray then to God, that he would be propitious unto your studies and labours, in giving thee the true knowledge of this fecret Mystery; it is the gift of God, I have holpen thee what I can, but venture not to practife barely upon my words, for know that what I have only hinted, is far more then what I have difcovered; and what I have declared to thy first apprehension most openly, hath yet its lurking Serpent under the green Grafs, I mean some hidden thing which thou oughtest to understand, which thou being Cock-fure at first blush wilt negleft; but yet it will bite thee by the heel when thou approachest to practice, and make thee begin again, and it may be at last throw away all as a man desperate : for know that this is an Art very Cabaliffical, Aa a

Sir G. Ripley's fifth Gate. 373

Right so our Stone containeth Natures two, One hidden, subtle Soul, Heavens Pro-

geny, The other groß, compact, terrene alfo, Earth's product must to Earth by destiny; Which when resolv'd is made a seculency To sight, but the Cælestial part is still (Though over-clouded) most pure in-

wardly, And shall at last most Pearlie drops distill, Which shall the barren Earth with fruit in plenty fill.

Thus all our Secrets from the Earth do flow, "Tis Earth which for our Base at first we take.

rt

ofe

ke

ght

Our Water also unto Earth must go, And both together must a Limus make, Which we with respite by our Art must bake, Till all become a Spirit glorify'd, Whose firmness wasting, time shall never shake;

By perfect union th' are so surely ty'd, Each Element the other three within it self doth hide.

Aa4 Take

Take then that thing which Gold we pleafe " to call, ŀ

A

7

F

E I I

F

For

But 'tis not Gold, yet Gold it is in truth; Metalline 'tis, yet from a Mineral -

"It flows, which Art by Nature holp renew'th,

And to a Fool an ugly face it sheweth; Tet to a Son of Art it lovely seems, 'Tis Stellar white, and tender in his youth, And vile appears in many mens esteems, Tea the most part of men it for a trifle deems.

From it is made a subject of great price, Shew it the Goldsmith and he'l swear'tis Gold;

Fut look you fell it not, if you be mife, The Basis'tis of Secrets manifold, This for their secret main the Sages hold: The like is in Gold digged from the Mine,

But to procure it is scarce to be told, That you may understand, though every line Were plainly wrote, yet might your practice oft decline.

Sir G. Ripley's fifth Gate. 375

For 'tis a Labour hardly to be borne, So many tricks and turnings in it be, And he that tryeth it is furely forlorne.

Unlefs a crafty Master, credit me; For I have tryed both, yet could not fee How any in this way can be fecure: I therefore who have vowed fecrecy Have writ this way, which we can scarce endure For knowledge-sake to try, its ease will none

allure.

Our Kingly road I alfo hinted have, Our way in which a Fool can hardly erre, * Our fecret way, which much fad toyl will fave,

Which is so easie, that I may averr, If thou shouldst see it, thou wouldst it preferr

To any Earthly pleasure ; yet beware That yon mistake not, for I do averr, A mingled Dostrine these lines do declare, For both ways in this Book of mine do claim a share.

Learn

Learn to diftinguish every sentence well, And know to what Work it doth appertain; This is great skill, which few as I can tell By all their reading yet could ere attain, And yet of Theory this is the main: Also to know accordingly to give Due heat, which in one way thou must be fain

T' increase ten-fold, thou mayst me well believe,

For what doth one decost, t'other away will drive.

Alfo their Operations different Appear, the one thou must sublime and boyl, O tedious way ! in which much time is spent, And many errours, which the Work will spoyl :

The other filently doth make no toyl, Like the fill voice which to Eliah came, About which Work thou needest not to broyl, Nor wantst thou Fiery Vulcan's parching flame,

A far more gentle heat begins and ends this Game.

But

Sir G. Ripley's fifth Gate. 377

But if thou canft each Work perform apart, And knowst them afterward to reconcile, Then art thou Master of a Princely Art, The very fucce fs will thy hopes beguile; Thou haft all Natures Works rankt on a File,

And all her Treasures at command dost keep.

On thee the Fates shall never dare but smile,

No Mystery is now for thee too deep,

Th' art Natures Darling, whether thou dost wake or sleep.

Pardon my plainness, if the Art thou knowst,

Twas the fruit of my untame defire To profit many; and without a boaft, No man above my Candour shall aspire : My zeal was kindled with Minerva's Fire, And thou who to this Art wilt now apply, My Book in Natures way shall load thee higher,

Then ever thou alone mayst hope to fly, If only thou shalt favour'd be by Destiny.

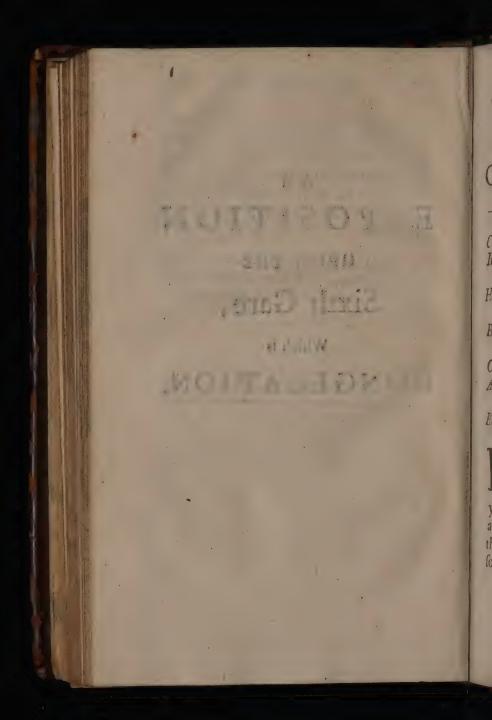

Perufe

378 An Exposition, &.c.

Peruse these lines, and being read, review And read again, and on them meditate, Each reading shall fresh Mysteries and new Discover, which are scatter d in each Gate 3 For they so linked are, that all relate To each, and we our words have woven so, That thou mayst soon erre by misleading Fate, Unless for to distinguish thou do know 3 Remember that mongst Briars thick, sweet Roses grow.

AN

AN EXPOSITION UPON THE Sixth Gate, Which is CONGELATION.

The Sixth Gate Opened, Which is CONGELATION.

281

Congelation, &c. It is of foft things in duration of colour white, &c. How to congeal he needeth not much to care for Elements: But Congelations be made in divers wife of Spirits, &c. Of Salts diffolved, &c. and then congeal'd, And fome diffolveth congealing manually, &c. But fuch congealing is not, &c.

Aving largely run through the first five Gates, in which is all the difficulty, pre-supposing now that you have passed the states of the Night, and are now come to the approaching of the Day, whose dawning is to be seen soon after the darkness of the Night, and

and is difcovered by variety of gay Clouds, which run before the Sun in its up-rifing.

282

The first remarkable way mark that you are to meet with, is the whiteness of the Compound, for the Peacocks tail though with its gayness it refresheth and delights the beholder, yet those colours are but transfert; but the white is a stable colour, and it is thy first Harvess, in which the moissure is vanquished, and volatile Natures are fixed.

The Work as it is the long-wilhed Haven, fo it is performed without any help of the Artift, any more then to continue a due degree of outward heat; for know that thou haft not fo great a defire after this fight, but Nature hath as great an appetite to obtain it, for it is the end of all her former Operations, from the attaining whereof thou canft not hinder her, if the external heat be continued as it ought.

Yet about this the whole company of Alchymifts do mightily bufie themfelves, who have nothing more in their hopes then to make our great *Elixir*; do main-

Sir G. Ripley's fixth Gate. 383

ly labour after Congelation, though in their Solution, in which the Key of our Coagulation refteth, they are as flupid as Blocks.

t

.

1-

is

Sy

1-

17

Some diffolve Metals with Corrofives, others Salts, and afterwards filter them, which they think graduates them, with which trumpery they intend no lefs a Coagulate, then the true permanent Tincture: but alas they are deceived, for they work not upon the right Matter.

Others although they happen to flumble in part upon the right Matter, yet herein they erre, that they underftand our Operations prepofteroully, and interpret our meaning contrary to our true intent; for all that they dream of, is fuch Operations which are to be performed by hand: thus they diffolve and congeal, but flumble *in operandi modo*.

For our Congelation is no fuch thing as this, but in every point it is contrary to it; for in our Operation Nature only works, who therefore doth bring forth a true, and not a Sophiftical Operation.

BB D C DOLL OUT

Our Congelation dreadeth not the Fire, For it must ever in it stand unstuous; And it is also a Tinsture so bounteous, Which in the Air, &c. Moreover congeal not, &c. But that like Wax it will melt anon withouten blast, For such congealing accordeth not, &c. Which Congelation availeth us not. 2.80

Wit

den

FOr as in our Solution we do not make our Gold volatile as to fhew, as Fools may do, but actually it is made fugitive, fo as that by no Art of man it can ever be fixe again, but only by that Nature which made it volatile; fo alfo our Fixation doth make our flying Spirits fo Fireabiding, that they by no Art of man can ever be burnt away, yet it will flow like Wax.

Nor is it fixed in manner of flying Spirits in Vegetables, which are fixed by burning into an *Alcali*, for it will never relent neither in the Air nor Water, like to a congealed Salt.

Nor yet is our Congelation a formal TranfStr G. Ripley's fixth Gate. 385 Transmutation of a thing by another seminal virtue, for then it would become of a Stony, Flinty, or Adamantine nature; but by its own internal virtue, the Mercury is changed into Sulphur incombustible, yet so as that the Mercuriality retains some of its qualities in a very noble remarkable way, furnishing the Compound with a fusible unctuosity, when at the same time the Sulphur retains that fluxibility with a most noble incombustibility.

11

1

5

2

So then take this for the Touch-Itone of all thy Alchymical endeavours, if ever thou intend any thing commendable in our Art; fee that thy Medicine be of an eafie fufion, fo that when it is caft on a plate of Metal heated, it may enter it, and flow on it like Wax or melted Pitch 5 yea let the flux be fo eafie, that it may flow upon *Mercury*, and enter it before its flight, otherwife brag not of thy skill, for thou art yet in a way of Sophiftry, out of which thou fhalt never efcape, without a more then ordinary providence of God.

SO then our Congelation is nothing elfe but the whitening of the Bodies, of which the Philosopher speaketh, when he saith, Whiten thy Body, and burn thy Books, lest our hearts be broken.

This is the Haven at which after many a nights watching, and days labour, thou mayst with Gods bleffing hope at length to arrive; but in the mean seafon be patient, and expect the Harvest in its seafon.

First thou shalt have thy Body whitened, and all become a white living Water, which being moved on the Fire con-B b 3 tinually,

tinually, will turn first into greater, and after that into smaller grains, till all at length become a Calx of an exquisite fineness, and transcendent brightness, which is our Lilly Candent, which in the end of thy Operations by continual decoction will be turned into a purple redness, which is our wonderful Secret.

2

b

fit

tr

SF

UI O

The Earthly großness therefore first mortified in moisture, &c. This principle may not be denied, &c. Which had, of whiteness thou mayst not miss, &c. And if, &c.

The caufe of all thefe ftrange alterations in one Glafs, on one fubject, with one decoction, without laying on of hands, is from the internal disposition of the Compound, which at the first is großs and Earthy, therefore in decoction it becomes very black, it being the nature of all moist groß things, by the Fire to acquire fuch a colour. And this is according to the intention of all Philosophers, that although thou seekest white and Sir G. Ripley's fixth Gate. 389 and red, yet thou must at first make black, before thou canst make white profitably.

EXPE-

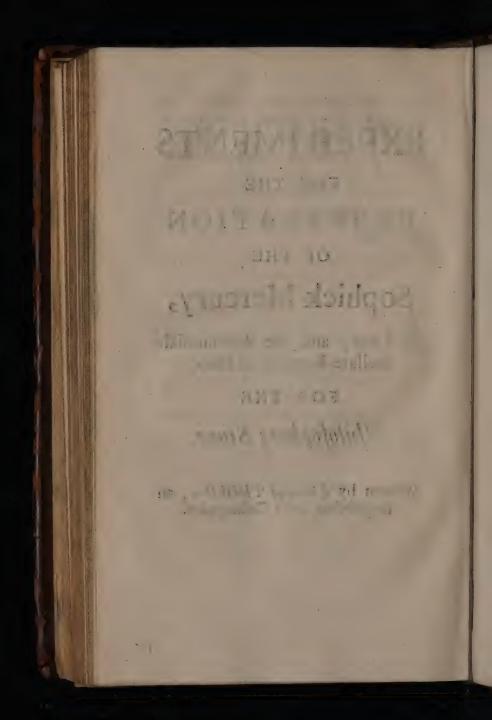

EXPERIMENTS FOR THE PREPARATION OF THE Sophick Mercury,

By Luna, and the Antimonial-Stellate-Regulus of Mars,

FOR THE

Philosophers Stone.

Written by *Eireneus Philalethes*, an Englishman, and a Cosmopolite.

EXPERIMENTS for the Preparation of the Sophick Mercury, by Luna and the Antimonial-Stellate-Regulus of Mars, for the Philosophers Stone.

1. The fecret of the Philosophick Arshick.

Took one part of the Fiery Dragon, and of the Magnetical Body two parts, I prepared them together by a ftrong Fire, and in the first fusion there was made about eight ounces of the true Arfnick.

2. The fecret of preparing the Mercury with his Arfnick, for the separating its Faces.

I Did take one part of the beft Arfnick, and I made a Marriage with two parts of the Virgin Diana into one Body; I ground it very fine, and with this I have prepared my Mercury, working them all together

2 Experiments for the Preparation

together in heat, until that they were most exquifitely incorporated : then I purged it with the Salt of Urine, that the Fæces did separate, which I put away.

3. The Purification of the Sophick Mercury.

The Mercury thus prepared, is yet infected with an external uncleanness, wherefore distill it three or four times in its proper Alembick, with its Steel Cucurbit, then wash it with the Salt of Urine, until that it be clear and bright, and in its motion leaves no tayl behind it.

4. Another most excellent Purgation.

T Ake of decrepit Salt, and of the Scoria of Mars, of each ten ounces, of prepared Mercury one ounce and an half, grind the Salt and the Scorias very fine together, in a Marble Mortar; then put in the Mercury, and grind it with Vinegar, fo long until no more of the Mercury appears:

n

B

of the Sophick Mercury.

appears : put it into a Glass Body, and distill it by Sand in a Glass *Alembick*, until all the *Mercury* be ascended, pure, clear, and splendidly bright; reiterate this three times, and you will have the *Mercury* excellently well prepared for the Magistery:

5. The fecret of the jnst Preparation of the Sophick Mercury.

Every fingle preparation of the Mercury with its Arfnick is one Eagle, the Feathers of the Eagle being purged from their Crow-like blacknefs, make it to fly the feventh flight, and it is prepared even until the tenth flight.

6. The fecret of the Sophick Mercury.

I Have taken the proper quantity of the Mercury, and I mixed it with its true Arfnick, to wit, about four ounces of Mercury, and I made a thin commixed confiftence; I purged it after a due manner, and I diftilled it, and I had a pure Body of Lune, whence I knew that I had rightly

A Experiments for the Preparation

rightly prepared it : afterwards I added to its weight of Arfnick, and I increased its former weight of Mercury, in fo much that the Mercury might prevail to a thin flux, and fo I purged it, to the wasting of the blackness almost to a Lunary whitenefs: then I took half an ounce of the Arsnick of which I made a due Marriage, I added it to this betrothed Mercury, and there was made a temperature like Potters Loam, but a little thinner; I purged it again, after a due manner, the Purgation was laborious, and a long time: I made it with the Salt of Urine. which I have found to be the best in this Work.

7. Another Purgation, but yet better.

I Have found out a better way of purging it, with Vinegar and pure Sea-Salt, fo that in the space of half a day I can prepare one Eagle: I made the first Eagle to fly, and Diana is left, with a little Tincture of Brass; I began the second Eagle by removing the superfluities, and then I made it fly, and again the

it

of the Sophick Mercury.

5

the Doves of *Diana* are left, with the Tincture of Brass; I conjoyned the third Eagle, and I purged the fuperfluities, by removing them, even to a whiteness, then I made it fly, and there was left a great part of Brass, with the Doves of *Diana*; then I made it fly twice by it felf, to the whole extraction of all the Body; then I joyned the fourth Eagle, by adding more and more of its own humour by degrees, and there was made a very temperate confistence, in which there was no *Hydrops*, (or fuperfluous moifture) as there was in the three former Eagles.

1

-

n

10

8. I have found the best way of preparing the Sophick Mercury, viz. fuch as follows.

The Amalgamated Maß, espoused or joyned very intimately by a due Marriage, I put into a Crucible, and into a Furnace of Sand for half an hour, but fo that it might not fublime; then I take it out, and strongly grind it; then I put it again in a Crucible, and in the Furnace, and after a quarter of an hour or C c there-

6 Experiments for the Preparation

thereabouts, I grind it again, and I make the Mortar hot, by this means the Amalgama begins to be clean, and to cast forth a great deal of Powder : then I put it in the Crucible again, and to the Fire as before, for a convenient time, fo that it be not fublimed, otherwife the greater the Fire is, the better it is; fo continually putting it in the Fire, and continually grinding it, till almost all the Powder doth wholly disappear, then I wash it, and the Fæces are eafily caft out, and the Amalgama becomes intire without any Heterogeneity; then I wash it with Salt, and again do heat it and grind it : this I repeat to the full cleanfing it from-all manner of Fæces. Hoidgod seit gur

9. A threefold tryal of the goodness of the Prepared Mercury.

T Ake thy Mercury prepared with its Arfnick of feven, eight, nine or ten Eagles, put it into a Phial, and thou shak lute it with the Lutum fapientia: place it in a Furnace of Sand, and let it stand in an heat of Sublimation, so that it may ascend A Catalogue of certain Books, Printed and to be fold by William Cooper at the Pellican in Little-Britain, London.

8 Experiments for the Preparation

12. The extraction of the Sulphur from the living Mercury by Separation.

T Ake thy mixed corporal and fpiritual Compound, the Body of which is coagulated of the volatile by digeftion, and feparate the Mercury from its Sulphur by a Glafs Still, and thou fhalt have a white Luna fixed and refifting Aqua fortis, and more ponderous than common Silver.

13. The Magical Sol out of this Luna.

O^{Ut} of this white Sulphur by Fire thou thalt have a yellow Sulphur, by a mapual Operation, which Sol is the red Lead of the Philosophers.

14. Out of this Sulphur, Aurum potabile.

Thou mayst turn this yellow Sulphar into an Oyl as red as Blood, by circulating it with the Volatile-Mercurial-Philosophical Menstruum, so thou shalt have an admirable Panacea, or Universal Medicine.

15. The

1

te

u t

at

ar

of the Sophick Mercury.

15. The gross conjunction of the Menstruum with its Sulphur, for the formation of the Off-spring of the Fire.

T Ake of thy purged, beft prepared and choiceft *Mercurg*, of feven, eight, nine, or at most ten Eagles, mix it with the prepared *Laton*, or its red *Sulphur*, that is to fay, two parts of the Water, or at the most three, with one of the pure *Sulphur*, ground and purged; *N.B.* but it is better that thou takest two parts to one.

16. The working of the mixture by a manual Operation.

T His thy mixture thou fhalt grind very well upon a Marble, then thou fhalt wash it with Vinegar and Sal Armoniac, until it hath put off all its black Fæces; then thou shalt wash off all its faltness and acrimony with clear Fountain-water, then shalt thou dry it upon clean white Paper, by turning of it from place to place with the point of a Knife, even unto an exquisite drynes,

17: The

Experiments, &c.

, 17. The putting in of the Foctus into the Philosophical Egg.

Now thy mixture being dryed, put it into an Oval Glass, of the best and most transparent Glass, of the bigness of an Hens Egg; in such a Glass let not thy Matter exceed two ounces, seal it Hermetically.

18. The Government of the Fire.

5

9.

1

Then you must have a Furnace built, in which you may keep an immortal Fire; in it you shall make an heat of Sand of the first degree, in which the dew of our Compound may be elevated and circulated continually day and night, without any intermission, &.c. And in such a Fire the Body will die, and the Spirit will be renewed, and at length the Soul will be glorified and united with a new immortal and incorruptible Body: Thus is made a new Heaven.

FINIS.

These Books in this Catalogue were written by Eirenaus Philalethes, whereof these 15. following are Printed.

- 1. T Ntroitus apertus ad occlusum Regis Palatium. Amft. 1667. This is Re. printed in Germany, with the Collection of Books called Mufaum Hermeticum of the Edition 1677. in 4º
- 2. --- Idem in English, called Secrets Reveal'd, Printed at London 1669, in 8°. being much more perfect than the Latine Editions.
- 3. The Marrow of Alchymy, in two Poems or Parts, in English Verse, Lond. 1654. & 1655.
- 4. Ars Metallorum Metamorphofews,) Amft. 1668.
- 5. Brevis manuductio ad Rubinum (in 8º. Thefe Cælestem. are likewise
- 6. Fons Chymica Philosophia, in the aforefaid Edition of the Museum Hermeticum.
- 7. Methodica Enarratio trium Gebri Medicinarum,
- 8. Vade-Mecum Philosophicum, five Lond. 1678. breve manuductorium ad Camin 8°. pum Sophia.
- 9. Experimenta de preparatione Mercurii Sophici,

11. --- Idem upon Sir G. Ripley's

Alchymy,

10. A Commentary or Exposition upon Sir G. Ripley's Epiftle to Edw. IV. King of England,

Lond. 1678. in 8°.

Preface to his Compound of E

12.

- 12. Idem upon the first fix Gates of his Compound of Alchymy,

> Place this at the latter end, after the Latine page.

Breviary of ALCHEMY; OR A COMMENTARY UPON Sir George Riplers RECAPITULATION: BEING

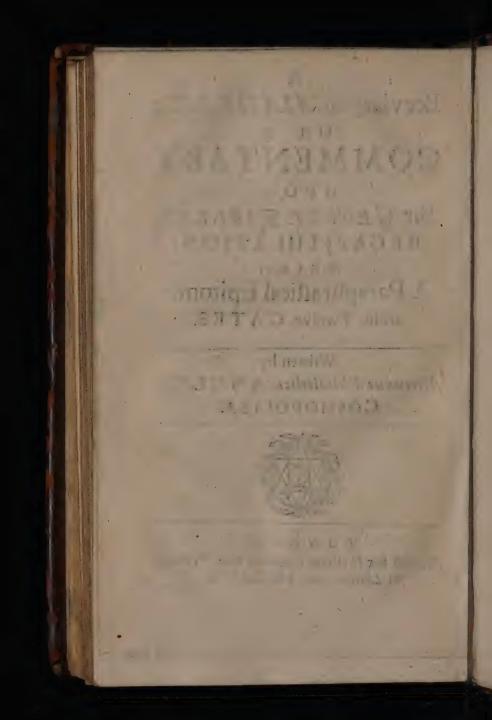

A.

A Paraphrastical Epitome of his Twelve GATES.

Written by Æyrenæns Philalethes ANGLUS, COSMOPOLITA.

LONDON, Printed for William Cooper at the Pellicans in Little Britain, MDCLXXVIII,

TATE THE TRADE

Sir George Ripley's RECAPITULATION.

FOr to bring this Treatife to a final end ; is And briefly here to conclude these secrets all : Diligently look thou, and to thy Figure attend. Which doth in it contain these secrets great and (mall : And if thou it conceive, both Theorical and Practical. By Figures and Colours, and by Scripture plain, Which wittily conceived, thou mayest not work in vain. Confider first the Latitude of this precious Stone. Beginning in the first side noted in the West, Where the red Man, and white Woman be made one,

A 2 Sponfed

Sir G.Ripley's Recapitulation.
 Spoufed with the Spirit of life to live in love and reft:
 Earth and water equally proportion'd, that

is best;

And one of the Earth is good, and of the Spirit Three,

Which Twelve to Four also of the Earth may be.

III.

Three of the Wife, and one of the Man thou must take;

And the less of the Spirit there is in this Difponsation,

The rather thy Calcination for certain shalt thou make :

Then forth into the North proceed by obscuration

Of the red man and his white Wife called Eclyplation;

Lo fing them, and altering them betwixt Winter and Vere,

1

1

F

Into Water turning Earth, dark, and nothing clear.

IV.

From thence by Colours many one into the East ascend, Then shall the Moon be full, appearing by day-light: Then Sir G.Ripley's Recapitulation. 3 Then is five paffed Purgatory, and her courfe at an end: There is the up-rifing of the Sun appearing white and bright; There is Summer after Vere, and Day after Night: Then Earth and Water which were black, be turned into Air, And Cluds of dark nefs over-blown, and all at peareth fair.

·V.

And as in the West was the beginning of thy practice.
And the North the perfect mean of profound alteration :
So in the East after them is the beginning of scientification.
But of this course up in the South the Sun maketh confummation.
There be the Elements turned into Fire by Circulation.
Then to win to thy defire, thou needst not be in doubt.
For the Wheel of our Philosophy thou hast turn'd about.

A 3

Sir G. Ripley's Recapitulation.

VI.

4

Put yet about again 2 times turn thy wheel, In which be comprehended all the fecrets of our T hilosophy
In Chapters Twelve, made plain to thee, if thou conceive them well;
And all the fecrets by and by of our lower Astronomy,
How thou shalt Calcine Bodies, perfect, difsolve, divide, and putriste,
With perfect knowledg of all the Poles which in our Heaven been
Shining with Colours inexplicable, never were gayer seen.

VII.

And this one fecret conclusion know withouten fail, Our Red Man teyneth not, nor his Wife, until they teyned be; Therefore if thou lift thy felf by this craft to avail, The Altitude of the Podies hide, and shew out their profundity, In every of thy Materials destroying the first Quality, And Sir G. Ripley's Recapitulation. 5 And fecondary Qualities more glorious in them repair anon; And in one Glass, with one Reg'ment Four Natures turn to One.

VIII

Pale and black with false Citrine, unperfect White and Red,

The Peacock's Feathers in Colours gay, the Rainbow, which shall over go

The spotted Panther, the Lyon green, the Crow's Bill blew as Lead;

These shall appear before the perfect White, and many other moe.

Colours; And after the perfect white, gray and false Citrine also:

And after these, then shall appear the bloody red invariable;

Then hast thou a Medicine of the third order of his own kind multiplicable.

IX.

Thou must divide thy white Elixir into parts Two,

Before thou Rubifie, and into Glasses Two let them be done,

If thou wilt have the Elixirs for Sun and Moon, so do,

A4 With

6 Sir G.Ripley's Recapitulation. With Mercury then them multiply unto great quantity foon: And if thou hadst not at the beginning enough to fill a Spoon,

Tet thou mayst them so multiply, both the White, and the Red,

That if thou liv St a Thousand Tears, they will stand thee in Stead.

X.

Have thou recourfe unto the Wheel therefore, I connfel thee,
And fludy him well to know in each Chapter truly;
Meddle with no Fantastical Multiplyers; but let them be,
Which will thee flatter, and falsy say they are cunning in Philosophy;
Do as I hid thee, then dissolve those foresaid Bases wittily,
And turn them into perfect Oyls with our true Water ardent
By Circulation, that must be done according to our intent.

XI.

These Oyls will fix crude Mercury, and convert Bodies all

Inta

Sir G Ripley's Recapitulation. 7

Into perfect Sol and Lune when thou shalt make Projection ;

That Oyly Substance pure & fixt, Reymond Lully did call

- His Bafilisk, of which he never made fo plain detection:
- Pray for me to God, that I may be one of his Flection;

And that he will for one of his at Doomsday me ken,

And grant me in his Bliss to Reign with him for ever, Amen.

A Breviary of Alchemy; ORA COMMENTARY UPON Sir GEORGE & IPLETS RECAPITULATION: BEINGA Paraphraftical Epitome of his XII Gates.

Stanza I. Position I. That the Art is mest certainly true.

8

Hich wittily conceiv'd, thon mayeft not Work in vain. Whence observe the Truth and Certainty of the Art; fo Father Hermes, It is true (faith he,) without falfhood,

certain, and most true; That which is above, is like that which is beneath; and that which A Brewiary of Alchemy. 9 which is beneath, is like that which is above, to bring about the Miracles of one thing. So Trevisan, Flammel, Dionys. Zachary, and others, affirm upon their own Experience: And so this our Author in his Epistle to King Fdmard; his Conclusion of the Admonition concerning erroneous Experiments, and other places of these his Twelve Gates, that I need not enlarge on this Subject.

Stanza II. Polition II. Our Work is made of Three Principles.

W Here the Red Man and the White Woman are made one, &c. Thence it is evident, that our Operations are made of Three Principles, yet of one Effence; the Red Man, the White Wife, and the Spirit of Life : By the latter, the two former are Efpoufed or made One. This is that which Trevifan calls his One Root, and Two Mercurial Substances, crude at their taking, and extracted out of their Minera's : This our Author elfe-where calls his Trinity and Unity; the Trinity respecting the Substances as they are feverall; the

12.

W

1 hy

e, at

ch

10 A Breviary of Alchemy. the Unity refpecting their Effence, which is intirely Homogenial; Therefore it is added, that they live in love and reft without repugnancy, which could not be were they not Effentially and Radically the fame; For likeness of Nature is the Cause of Love, and Oneness of Effence the true ground of Union; among different Substances can only be expected Confusion, if not Destruction.

Polition III.

Three Substances make only Two Natures, Earth and Water.

E Arth and Water equally proportion'd, that is beft. Here it is evident, that thefe Three Substances make up but Two Natures of Earth and Water : The Man and Wife are both Bodies or Earths; the one fixed and ripe; the other Volatile and unripe, and by Mixture make a brittle black Hermaphroditical Body or Earth called the Philosophers Lead, as Ripley in his Preface expressed it. The White Woman, or Female, is otherwise called the Moon by all Philosophers; and by this Author

7

1

11

Tł

RI

A Brewiary of Alchemy. 11 Author in his Doctrine of Proportions; One of the Sun, and Two of the Moon, till altogether like Pap be done.

Polition IV.

From equal Pondus of Earth and Water, Three of Water to One of the Earth is good, but equal is beft.

Then make the Mercury Four to the Sun, Two to the Moon, &c. as it should be in Figure of the Trinity. And so we come to take notice of the Doctrine of Proportion between the Earth and Water, equal that is best; the same faith our Author in his Chapter of Calcination. This is the furest and best proportion, speaking of equal Pondus of Earth and Water; and gives the Reason, because Solution will be soner made, viz.

The more thy Earth, the less thy Water be, The sooner and better Solution shalt thou see.

And here he affirms the fame of Calcination, which goes before Solution. Yet Three of the Water to One of the Earth, will do well, left the Tincture fhould not have 12 A Brewiary of Alchemy. have room to be fufficiently dilated in the Water, and the Body opened by it; and this is the Pondus of Roger Bacon, which requires a longer time before the quick be kil'd; and by confequence, the reviving of the dead muft be longer in doing; For Calcination is nothing elfe, but a killing the moift with the dry; till which be done, there is no reviving of the dry by the moift, but they have one and the fame Operation and Period of time; for one dies not, but the other revives: nor doth the Dragon die, but with its Sifter.

Polition V.

The White Wife in the first Conjunction is to be Three to Cne of the Red Man.

Three of the Wife, and one of the Man thou take, &c. From the Hondus between the Earth and Water, come we to view the Proportion between the Man and his Wife; Here the Pondus is laid down Three to One, and to there are Four parts of Farth to Four of Water, or more, until Twelve; that is, Three of Water to One of the Earth. This alfo is, clear A Brewiary of Alchemy. 13 clear from the Chapter of Conjunction, where the Woman is allow'd 15 Veins to 5 of the Man, as to the Act of their Foecundity, which is interpreted of the first Conjunction by himfelf, that the Man must have but 3 of Water, and his Wile 9, which is T2-of Water to 4 of the Farth; by which it is evident, that the Woman is to exceed her Fusband in a three-fold Proportion.

Or Two to One after Reymund : Or Four to One according to Alanus; but Three to One is beft.

2

e

h

211

be-

e to

lan.

are

10

eof

lo is . lear

However, in Reymund's Detrine of Proportions cited by our Author in his Gate of Calcination, One of the Sun is joyn'd with Two of the Moon, which make Three of the Body; and to these are added Four of Mercury, which is One more of the Spiritual than of the Corporal part; and this the Author compares to Trinity and Unity, both are good; Yea, and Alanus preferibes Four parts to One, which may be done, but Three to One is best and equal Pondus of Spirit and Life, for compleating of the Marriage between this Royal Pair, the Sun the Eusband, and the Moon the Wife : Of this speaks this Author

14 A Breviary of Alchemy. Author in his Gate of Solution; One in Gender they be, but in Number not fo; The Father is the Sun, and the Moon the Mother, the Mover is Mercury.

This Compound according to its various Confiderations, hath many Relations, and as many Denominations; Sun and Moon, Man and Wife, Body, Soul and Spirit, Earth and Water, Sifter and Brother, Mother and Son, with many others; but its Proper Name is Magnefia.

Quest, What is the Red Man? what his White Wife? What the Spirit of Life?

It may be here queftioned, what this Red Manis? what his White Wife? and what the Spirit of Life? for that is the only knot in understanding the Writings of Philosophers, whose various Expressions, and seeming Contradictions herein, do obscure the Art wonderfully: Yet however they seem to differ in their Writings, they mean all one thing, if well or rightly understood.

Answer 1st. What the Red Man is?

The Red Man betokens the perfect Body of the Sun, or his Shadow the Moon; For Lune the Body, which is one of the Seven, is a Male, and a perfect Body,

Å

A

A Breviary of Alchemy.

I.S. dy, and fixed, only wants a little Digeftion; and therefore the Red is hid under its visible White, as White is hid under the visible Red of Sol : Therefore our Author in his Work of Albification, faith, that the Sun appeareth White and Bright: And Trevifan faith, our King, who is cloathed in Garments of pure Gold, after he is once in the Bath, appears no more till after one hundred and thirty days; and then he appears White, and wonderfully bright and shining. And an old Philo-Sopher faith, Honour our King at his return; from the East in Glory and admirable bright whiteness. Therefore saith Artefins, Our Water is of kin to the perfect Bodies, to the Sun, and to the Moon; but more to the Sun then to the Moon ; (Note this well.) And in all his Books he joyns the Sun and Moon the perfect Bodies Gold and Silver for the work. So doth Ripley, and fo all Philosophers; by which it is evident, that either of the perfect Metals or Luminaries with our AquaVite, will compleat the work; as Arnold expressly faith in his Questions & Anfivers to Boniface ; and Jodocus Greverun

]-

-

3,

et

ir

if

he

ne

0.

16 A Breviary of Alchemy.

verus in his Treatife, confirms the fame in these words; If so be (faith he) thou be so poor that thou canst not take Gold, then take so much Silver; yet Gold is the better, as being nearer of kin to our Water and Mercury. Answer 2. What is the White Wife?

Secondly; The White Wife, otherwife called the Moon, is a Female ; it is a Coagulated Mercury, but not fixt : A fpiritual Body, fluxible in nature of a Body, yet Volatile, in nature of a Spirit; It is called therefore Mercury of the Philosophers ; Our Green Lyon ; Our immature or unripe Gold : It is Fontanus's Fire, Artephius's middle substance, clear like pure Silver, which ought to receive the Tin-Etures of the Sun and Moon, his fbarp Vineger, his Antimonial-Saturnine-Mercurial Argent Vive, without which Laton cannot be whitened; of which an old Philosopher faith, whiten the red I aton, by a white, tepid, and fuffocated Water; of which testimony Trevi fanus affirms, that nothing could be faid better or clearer. This is that which is intimated in the Vi-' fion of Ariflans', who found a People that were Married, yet had no Children, becaule

F

A

m

It

01

it

del

A Breviary of Alchemy. 17 Caufethey married two Males together : Such are they who mix Sol and Lune, both Corporal and fixt together, whom the Spirit will never revive, becaufe there is not conjugal Love. Joyn therefore Gabritius to his beloved Sifter Feya, which is a tender Damfel, and ftraight-way Gabritius will die; that is, will lofe what he was; and from that place where he appeared to have loft what he was, he fhall appear what he was not before.

Answ. 3. What is the Spirit of Life? Thirdly, The Spirit of Life is Mercury; The Mover faith this Author is Mercury, with which the Stone is to be multiplyed when it is made : And it must be true. Mineral Mercury, without any forreign, mixture, as Arnold refolves expressly in his Answer to Poniface : And to Ripley faith, fome can multiply Mercury with Saturn, and other fubstances, which we defie; Distil it therefore till it be clean, &c: It moreover must have all the proportions of Mercury its ponderofity, otherwife it could not be Metalline; its Humidity, otherwise the Feminine Sperm would be deficient, and its ficcity, not to wet the B 2 hand ;

i'a

Þ

10

er;

at

Vi-

hat

R.

18 A Brewiary of Alchemy.

hand; which it can no fooner lofe by Corrofives or otherwife; but it ftraightway lofeth its first Mineral Proportion, and fo is no longer an Ingredient of our true Tincture.

Polition VI.

As the West Latitude is the entrance, so in the North is the first alteration.

PRoceed then forth to the North by obfenration, &c. Loofing them, and altering them, O.c. The Materials being found, and mixt according to the Proportions taught before, is called the West Latitude; because in it the Sun sets, and afterwards appears no more in his Red Robes, till he first be cloathed with a White glittering Robe, and be Crowned with a very bright Oriental Diadem. Now the progress into the North, is a discovery of the Profundity of the Stone, and is compared to the Winter, which is in the North, (chiefly) long, tedious, cold and flabbery; fo will it be in this Work; the Signi are Capricorn, Pisces, and Aquarius; In this there 15

2

A Breviary of Alchemy. 19

is a retrogradation of *Sol* into its first matter, in which alteration the old Form dies, the Matter rots and putrifies; and is after renewed in the East.

This Operation (faith Flammel) is not perfected in lefs then Five Months; and the Colours of the Compound are dark, obscure, waterifs, and at length black like Pitch; in which blackness the Body is rotted into Atoms; which intire blackness, and height of corruption lasts but 2 or 3 days; and therefore faith Ripley in his Epistle, the third day he shall arise; the same saith Dastin in his Rofary, where he allows four days for Putrefaction : The fame faith Efferarius the Monk in his intire Treatife published with Dastin; However, the whole time of blackness, in coming, continuing, and going away, is 150 days, although the Sun begins to appear in 130 days, if you work aright. This I have added for the fake of many who expect black of the blackelt in 40 or 50 dayes, mistaking Flammel herein; who faith, the colour must be black of the blackeft, and like to the colour of the Dragons in 40 days, which Dragons were blackifh, blewifh, and yel-Ba lowifh.

10

119

1g

h

nto

in-

the

pri-

15

20 A Breviary of Alchemy.

lowith, which colours thew that the Matter begins to rot into Atoms; which rottennels is not perfected in lefs than 150 days. (fo as to let the Sun appear with its Rays;) Firft in a small Circle of Heir of a whitish Citrine; which increaseth, and changeth hue day by day, till whitenels be fully compleated.

Polition VII.

The East denoting Whiteness, is the beginning of the Stones Altitude.

Thence by Colours many into the Fast afcend, &c. In the Work are three Dimensions; Altitude, Latitude, and Profundity: The Altitude is the Persection of the Bodies which is Inchoate in Whiteness, and compleat in Redness. The Profundity is the first Matter into which they are resolved; For Multiplication and the Latitude is the means through which it passet from its Persection to be abased; and from its abasement to its Glorification.

In this paffage are infinite gay colours like

A Breviary of Alchemy. 21 like unto those as appeared before Blacknefs, but more glorious; For note, the Stone hath but three colours, Black, White and Red : In the first when compleated, it ftays three, or four days at most; in the fecond as long; in the last it reposeth it felf for ever, between these Periods as the Matter is moifter or dryer, purer or impurer, many intermediate colours appear, more then can be numbred; But Two, (viz.) Green and Yellow, are of long continuance, before the White and the Red : But many colours appear between the beginning of that Work, and the first colour of Blackness ; And although feveral colours appear, yet are they dark, foggy, and foul coloured; by which it appears, that Blackness is the predominant, which for a fpace will appear like the Ægyptian darkness, and is much about the fame continuance : fo between Blackness and the White, although infinite colours appear; yet the Basis of them being Whiteness, they are bright, and very glorious, which being only transient, pas, and go, and others come in their place, until the White be perfected.

B 4

· .

2.

IS

Polition

22 A Breviary of Alchemy.

Polition VIII.

The South or Redness is the complement of this Mastery.

OF this course in the South the Sun maketh Conjummation. After the White, the Fire being continued, the Compound will become Azure, Gray, and then Citrine, which will last a long time; and at last end in a bloody Redness.

Polition IX.

He that suppose the bis Work ended when the Stone is brought to its redness, is mistaken.

BUt yet again Two times turn about thy Wheel, &c. The Stone being by confant and long Decoction brought to this pass; he who thinketh the race quite run, reckons without his Host, and must reckon again : It is Medicine of the first Order, and must be brought to the third Order by imbibitions and Cibation, which is a fecond turning round the Wheel; and by Fermen-

A Brewiary of Alchemy.

23

Fermentation, which is a third turning round the Wheel, and brings the Medicine to the third Order, and makes it then fit for Projection, which at first it is not; For till the Medicine will flow like Wax, it cannot enter Mercury before its flight; but the Powder as it is made at first, is like Grains or Atoms, and is congealed in a far greater heat, then will make I to fume, yet it abides in its form of Dust or Powder, which must be otherwise before it be fitted for Projection; therefore the Stone tingeth Mercury into a Metalline Mals in the twinkling of an eye, as our Author faith in his Preface, even as the Bafilisk kills by fight : But the Red Sulphur converteth Mercury by a digestion of time into its own Nature, (viz.) Powder, if it be joyn'd in a due proportion, and digested in a due heat : Therefore faith our Author, if you give it too much, it must have a Vomit, or it will be fick too long, but the Stone will never part with any Mercury that is joyned to it in heat; our Sulphur then is a Royal Infant, which doth both hunger and thirst; and if you can but be a Nurse to it as you ought, it will repay

-

is

11,

)11

er,

er

2

)ÿ

24 A Breviary of Alchemy.

repay both your Pains and coft : Leave not then where you fhould begin; but go on till you bring it to the third Order, which *Reymond* calls his Oyls and Unguents; and fo our Author likewife.

Three Properties there are in which the White and Red Sulphurs of the first Order, differ from those of the third Order.

One flows as eafily as any Wax in heat, or on a hot Metal : the other in a ftrong heat abides a Powder.

The one is like to Glass, brittle, ponderous and shining; the other a powder like to Atoms.

The one enters *Mercury* like an Oyl, and Coagulates it in an inftant : the other drinks up *Mercury* only, as the Calx of a Metal would do, but will not retain it, if the Fire be increased ftrong, nor turn it into Metal 3 but if the heat and proportion be both as they ought, by a digestion of Time, it turns it into its own Nature : And so, (as *Ripley* faith truly,) you may Multiply both White and Red with *Mercury*; That if at first you had not enough to fill a spoon, yet in short time you may

ti

A Brewiary of Alchemy. 25 be ftored for your whole life, were it ten times as long as it is like to be.

Polition X.

Our Stone must have a Specification to Metals before it will Project.

OUr Red Man tevneth not until he teyned be, &c. Our hed Man or King must be teyned by Ferment, before it will tinge imperfect Metals : the Ferments are only Sol and Luna, the Proportion a fourth part to the Compound let the Sulphurs be, and three parts of Sol or Luna according as the Sulphur is : or four parts Sol and Iuna, and the Sulphur a fifth part; then with Mercury digeft and putrifie your Ferment, and congealit, and again Ferment it, till it flow like Wax or Oyl; then will that Oyl fix Mercury, and turn any Metal into Perfection; which you may then Multiply at your pleasure, or you may multiply it before Fermentation : Then take the perfect Stone for your Body, and mix him with the White Wife in proportion as at first, and add the Spirit of Life,

1

7*

e

as.

26 A Breviary of Alchemy.

as at first, and digest it till it pass the three colours, Black, White, and Red.

Thus doth our Author conclude his Erroneous Experiments alfo: I never fam true work but one, faith he. One he did, but it was after infinite Errours, and other work no Philosopher ever yet faw, which he briefly describes.

Remember Man the most Noble Creature, &c. that is Gold; It is an errour to write it, (Remember that Man is the most Noble Creature of Earthly Composition;) For Man is not of Earthly Composition, but Stones, Metals, and Clays, &.c. are. Now because we seek the Noblest of Creatures of Earthly Composition, we must be fo wife as to take it for our Principle : For as he faith elfe-where; as Fire of burning the Principle is, fo the Principle of Gilding is Gold I wis. In this nobleft Creature he faith, are the four Elements proportioned by nature, which makes it incombustible, for were any predominant, it would not abide; but as Trevisan faith, the Anatical proportioning the Elements in a metalline matter, is the very form of Gold: or that rather which gives it its form. He adds

A Breviary of Alchemy. 27 adds a natural Mercuriality, which cofteth right nought; that is a pure, fincere Mineral Water : without adulteration, not Artificial out of Saturn, Jupiter, &c. But natural not a dear Mercury : but that which is common and cheap. He adds one of his Minera's by Art is brought, that is our green Lyon, for with our first Menstrue, we Calcine ouly perfect bodies; but none which are unclean, except one, which is ufually call'd by Philosophers the Lyon-Green, into this the clearness of the Sun, or of the Moon, fecretly defcends: that is, by this the Mercuriality, or profundity of the Sun and Moon are manifested by exuberation, but is hidden from fight along time; till after putrefaction, it exuberates and appears openly, bleeding and changing colours, and at first being cloathed in a glorious Green: of which faith the Rofary, O happy Greennefs, without which nothing can fpring? This exuberate-Mercury is our hidden Stone, that is, Potentially, for when that appears; repugnant natures are tyed to Unity, that is our Green-Lyon, or Minera, or vegetable humidiry, or Mercuria-

28 A Brewiary of Alchemy.

lity natural, which cofteth right naught, or our first Menstrue, and the noblest Creature of Earthly composition, which is either the Sun, or Moon, but especially the Sun: In each of which the Mercuriality is invisible, and appears not to fight; but by effect, that is, in the quality of clearness, with Whiteness in one, and with redness in the other, these three being United, the Mercury of the Sun exuberates and appears at first green, then is the Eclipfe near, and the Northern progrefs, the process after all this is fhort; this one thing putrifies, then wash him in his own broth, till he become White, then Ferment him wifely; there is the beginning, middle and end. Glory be to God.

AN EXPOSITION UPON Sir George Ripler's VISION.

Written by Æyrenæus Philalethes, ANGLUS, COSMOPOLITA.

LONDON; Printed for William Cooper at the Pellican in Little Britain, MDCLXXVII.

- I TO DO TRUE / HIT THEM VISION S' GEORGE RIPLE Canon of Bridlington, Unfolded. WEen busie at my Book I was upon a certain Night, This Vilion here exprest appear'd unto my. dimmed sight : A Toad full Ruddy I faw, did drink the juice of Grapes to fast, Till over-charged with the broth , his Bom -els all to brast : And after that, from poylon'd Bulk he caft his Venom fell. For Grief and Pain whereof his Members. all began to swell; With drops of Poyloned Sweat approaching. thus his fecret Den, His Cave with blasts of fumous Air he all bembited then : And from the which in Space a Golden Humour did ensue, Whose falling drops from high did stain the. Soyl with ruddy bue. A 2 And

The Vision of Sir George Ripley.

And when his Corps the force of vital breath began to lack, This dying Toad became forthwith like Coal for colour Black : Thus drowned in his proper veins of poyfoned flood ; For term of Eighty days and Four he rotting flood By Tryal then this Venom to expel I did defire ; For which I did commit his Carkass to a gentle Fire : Which done, a Wonder to the fight, but more to be rehears; The Toad with Colours rare through every fide was pierc'd; And White appear'd when all the fundry hews were past : Which after being tineted Ruddy, for evermore did last. Then of the Venom handled thus a Medicine I did make; Which Venom kills, and Saveth Such as Venom chance to take : Glory be to him the granter of fuch fecret ways, Dominion, and Honour both, with Wor-

hip, and with Praise. Amen.

逸逊躗透德逊乎边愿遇透透通 THE

VISION S'GEORGE RIPLEY,

Canon of Bridlington, Unfolded.

His Vision is a Parable rather or Enigm, which the Ancient Wife Philosophers have been wont to use often in fetting out their fecrets; this Liberty is granted to all

men for to make use of Enigmatical expreffions, to decipher that which is indeed mysterious. The Ancient Egyptians taught much by Hieroglyphicks, which way many Fathers of this Science have followed; but most especially they have made use of Mystical or Cabalistical descriptions; such is this. But to the thing in hand.

A 3

A

A Toad full ruddy I faw.-

Ere we have a Toad defcribed, and in it the whole fecret of Philofophers: The Toad is Gold; fo called, becaufe it is an Earthly Body, but most especially for the black flinking venenolity which this operation comes to in the first days of its preparation, before the whiteness appear; during the Rule of Saturn, therefore it is called the ruddy Toad.

To this Authors affent with one accord : when they fay our ftone is nothing else but Gold digested unto the highest degree, to which Nature and Art, can bring it ; and again the first work, faith anotherPhilosopher, is to fublime Mercury, and then into clean Mercury to put clean bodies: many witneffes I could bring, yea the whole current of writers run this way: And what if some subtle Philosophers feem to deny this, on purpose to deceive the unwary? We shall not make it our work. to reconcile them; (though we might) for many of them wrote very envioully, on purpole to enfnare ; all of them wrote S. L .. mysteri-

the Vision of Sir G. Ripley.

mysteriously, as much as they could to darken the truth : and at the best none of them were but men, and defcribed things according to their apprehensions in Philosophy, none of them wrote in every thing the naked truth ; for then the Art would become fo eafie, that it would be contemned. But what needs words ? we know the Truth, and we know by a fecret Character, true Writers from Sophisters; and we need no Arguments being eye-witneffes our felves, and know that there is but one truth; nor but one path, even the beaten path in which all who ever have attained this Art have troden, nor can we be deceived our felves; nor would we deceive others.

Did drink the juice of Grapes.

T His Toad is faid to drink the juice of Grapes according to the Philosopher, the body, faith he, is not nobler than Gold, nor yet the water more pretious than wine. This water they call fometimes Aqua Ardens, fometimes Acetum Acerrimum, but most commonly they call it their Mercury; A 4 this

this denomination I shall not infift upon; but shall assure you that it only deciphers Mercury, even that Mercury, of which I writ in my little Latine Treatife, called NING OODIAS XEUGOTOINTINGS OF Introitus apertus ad occlusum Regis palatium; in that I discovered the whole Truth fully and nakedly, and if not too plainly, I am fure plain enough. I shall not here repeat; to that I remit the Reader.

This juice of Grapes this Toad is faid to drink; that is not only in the groß Conjunction, which is an Impaltation of the body, with the Water to the temper of Dough or Leaven, which the Water readily doth: such affinity there is between the Water and the Body; as the Philosopher saith, this Water is friendly and pleafant to the metals. But over, and befides the Water foaks Radically into our Body; being circulated upon it. according as the Philosopher faith, When its own sweat is returned to the Body, it perforates it marvelloufly. Thus the Body drinks in the Water, or Juice of Grapes, not fo much then when they are first mingled : but most especially, when by de-

the Vision of Sir G. Ripley.

decoction it pierceth radically to the very profundity of it; and makes it to alter its Form; This is the Water which teareth the Bodies, and makes them no Bodies, but flying Spirits like a Smoak, Wind or Fume, as Artephius fpeaketh plentifully.

This operation is performed in a fhort while, in comparison of Subterraneal operations of Nature, which are done in a very long time; therefore it is that fo many Philosophers fay, that it is done in a very fhort time, and yet it is not without cause, that so many of the Philosophers have complained of the length of this decoction.

Therefore the fame Artephius who had faid, that this fire of the Water of our Mercury, doth that in a fhort time above ground, that Nature was in performing a 1000 years, doth in another place fay, that the tincture doth not come out at once, but by little and little each day, and hour, till after along time the decoction be compleat, according to the faying of the Philofopher: Boyl, boyl, and again boyl, and accompt not tedious our long decoction.

So

5

So fast.

6.

S O then this expression here, that the Toad doth drink in the Juice of Grapes fo fast, doth not imply but that this work must have the true time of Nature 5 which is indeed a long time, and fo is every decoction at least: fo they will seem to the Artist who attends the fire day by day, and yet must wait for the fruit with Patience, till the Heaven have showred down upon the Earth the former and latter Rain: yet be not out of heart, but attend until the compleatment, for then a large Harvest will abundantly recompence all thy toyl.

Till over-charged with the Broth, his Bowels all to brast.

IT follows in the Vision, that at length the Toad (over-charged with the broth)did burst as funder; This broth is the fame which the fair Medea did prepare, and pour upon the two Serpents which did keep the Golden Aples, which grew in the the Vision of Sir G. Ripley. 7 the hidden Garden of the Virgins Hesperides.

For the Vinegre of the Philosophers being circulated upon the Body, doth engender a substance like unto bloudy Broth, and makes Colours of the Rainbow, to appear in the ascension and descension upon your Lyon, until the Eagles have at length devoured the Lyon, and all together being killed with the Carion of the Carcasses become a venemous Toad, creeping on the Earth, and a Crow swimming in the midst of the dead Sea.

The Juice of Grapes then, which is our Mercury, drawn from the Chameleon or Ait of our Phyfical Magnefia, and Chalybs Magical, being circulated upon our true Terra Lemnia; after it is großly mixed with it by Incorporation, and fet to our fire to digeft, doth ftill enter in and upon our Body, and fearcheth the profoundity of it; and makes the occult to become manifeft by continual afcenfion and defcenfion: till all together become a Broth; which is a mean fubftance of diffevered qualities, between the Water and the Body,

16

n e

Body, till at length the Body burft afunder and be reduced into a Powder, like to the Atoms of the Sun, black of the blackeft and of a viscous matter.

And after that, from poyfoned bulk he cast his venom fell.

His Reduction of the Body, thus in this water ingenders fo venomous a Nature, that truly in the whole World there is not a ranker Poylon, or flink, according as Philosophers witness: And therefore he is faid to caft his fell venom from his poyfoned bulk; in as much as the exhalations are compared to the Invenomed Fume of Dragons as Flamell in his Summary hath fuch an Allusion. But the Philosopher (as he adds in his Hieroglyphicks of the two Dragons,) never feels his ftink, unless he break his Vessels, but only he judgeth it by the colours proceeding from the rottenness of the Confeations.

And indeed it is a wonder to confider, (which fome Sons of Art are eye-witneffes of) that the fixed and most digested Body

8

The Vision of Sir G. Ripley. 9 Body of Gold; should so rot and putrifie, as if it were a Carcas, which is done by the admirable Divine virtue of our difsolving Water, which no Money can purchase. All these operations, which are so enlarged by variety of expressions, center in one, which is killing the quick, and reviving the dead.

For grief and pain whereof his members all began to swell.

This venemous fume of exhalations returning upon the Body, caule it to fwell all over according to the faying of the Philosopher; The Body in this Water puffeth up, fwelleth and putrifieth as a Grain of Corn, taking the nature living and vegetable, therefore for this caule this Water is in this fence called by the Philosophers their Leaven, for as Leaven cauleth Past to swell, so this fermenteth the body, and cauleth it to tumefie and puff up; it is also called venom, for as venom cauleth fwelling, so this Water by its reiteration unceffantly upon our body.

Ty

d

ly

This

This operation is unceffant from the first incitation of the matter, even until compleat putrefaction; for the Toad doth always fend forth his exhalations (being rather called the Lyon,) till he be over-come in part : and then when the Body begins a little to put on the Nature of the Water, and the Water of the Body, then it is compared to two Dragons, one winged, and the other without wings : and laftly when that ftinking Earth appears, which Hermes calls his Terra Foliata, or Earth of Leaves, then it is most properly called the Toad of the Earth; from the first excitation, even to the last of this putrefaction : which exhalations are at the beginning for a time White and afterwards become Yellowith; Blewish, and Blackish, (from the virulency of the matter) which exhalations hourly condenfing, and ever and anon running down like little veins in dtops, do enter the Body marveloufly, and the more it is entred; the more it fwells and puffs up, till at length it be compleatly putrefied. tout and and

With

the Vision of Sir G. Ripley. 11

With drops of poysoned sweat, approaching thus his secret Den.

The following two Verses then are but a more Ample description of this work; of volatization which is an alcention, and descention, or circulation of the confections within the Glass. Which Glass here called the secret Den, is else-where called by the fame Author, a little Glaffen-tun, and is an ovall Veffel; of the pureft White Glass, about the bigness of an ordinary Hen-Egg, in the which about the quantity of an ounce of 8 drachms of the confection, in all mixed is a convenient proportion to be fet, which being Seal'd up with Hermes Seal, the Glass having a neck about 6 fingers high, or thereabouts, which being thin and narrow; is melted together Artificially, that no Spirits can get out; nor no Air can come in, in which respect it is named a secret Den? With and the second states of

Alfo it is called a fecret Den, becaufe of the fecretness of Ashes or Sand, in which

12

which in a Philosophical Athanor it is fet, the doores being firmly shut up, and a prospect left to look in by a Window, either to open a little; as much as is convenient sometimes; as occasion requires, or else with Glass put into it, to admit the view of the Artift; together with a light at hand to shew the colours.

His Cave with blafts of fumous Air, he all bewhited then.

7 Hich Glass, Neft, and Furnace being thus fecretly ordered, the Artist must in the first place expect to be in Prison a long time, as Bernard Trevisan faith, for the Concave of this secret place, will be fo bewhited with the fumes which afcend, that an Artift fules his work more by skill and reason, or the eye of the mind, then of the Body, for the Spirits arifing like a fmoak or Wind, flicketh to the Concave of the Glass, which is above the Sand or Ashes, and there by degrees, there grow drops which run down and moiften the Body below, and reduce as much as they can the Vision of Sir G. Ripley. 13 of the fixed, and so the Body by the Water, and the Water by the Body alter their colours.

And from the which in space a Golden Humour did ensue.

INfo much that at length, the whole Veffel will feem as though it were all over gilded with Gold, for the exhalations will be Yellow, which is a fign of true Copulation of our Man & Woman together, but before this Yellow, and with it there will be an obfcuring of the White brightnefs of the Fume, with mixture of Colours, Dark, obfcure and Blewifh:

The space is not long, for all the feveral passages are confpicuous before 40 days; for in that space from these Colours, are demonstrating Signs of Corruption and Generation, which is given us by the biting, and fiery Nature of our pontick Waters, and the resistance of our Bodies; in which Fight the Body is over-come, and killed, and dying yields these Colours: which is a Sign that the Eagles now are getting the B Mastery,

NS W DIF

Mastery; and that our Lyon hath alo a little infected them with his Carcas, which they begin to prey upon. This Operation is by Ingenious Artists called Extraction of Natures, and Separation, for the Tincture begins now to be separated from the Body. Also Reduction to the first matter; which is Sperm or Seed, which by reason of its double Nature, is compared to two Dragons. I shall not enlarge in this Vision but briefly unfold what is briefly laid down.

Whofe falling drops from high did ftain the foyl with ruddy hue.

T Hefe colours of the Mercury, do affect the fublident fixed Body, with futable colours and the Bodies from thefe exhalations, be Tincted with a ruddy colour, which Flamel expressed with a ruddy colour, that thefe twoNatures, or Dragons do bite one another very cruelly; and never leave from the time they have feised one upon another; till by their flavering Venom, and mortal hurts, they be all of a gore bloud, and then being stewed in the Vision of Sir G. Ripley. 15 in their own Venom, are changed into a fifth Effence.

And when his Corps the force of vital breath began to lack.

B Ut before the renovation of these Natures, they must in the first place pass through the Eclipse, both of the Sun and Moon and the darkness of Purgatory, which is the Gate of Blackness, and after that they shall be renovated with the light of Paradise.

This Allegorically is called Death, for as a man will refift violence, which intrencheth upon his life as long as he can, but if his Enemies are many and mighty, at length they grow too mighty for him, and he begins to fail both in strength and courage, and fo Paleness, the Harbinger of Death, doth ftand as it were on his lips, fo our Body or Man the Sun, like a ftrong Champion, doth refift long, till he be wounded, and bleed as it were all over, and then dies, at whose death blackness doth begin to appear, as of old the Ravens were foretellers of Mans death ap-B 2 proach-

proaching : for this Reiteration of Rotation of the Influences of the Heaven of it, together with Heat still drying up and soaking in the Moissure as fast as it falls, brings it at last naturally to die and corrupt, as any other thing doth.

And then the Corps begin to lack breath; that is, the Fumes begin to ceafe: for with oft alcending and defcending the Spirits are fomewhat fixed, and turned into Powder or Duft, and are now in the bottom of the Vefiel, drawing fast to Putrefaction: Nor do they for a time alcend, but remain below.

Wherefore govern your Fire, that your Spirits be not fo exalted, and climb fo high that the Earth want them, and they return no more : For this Operation is, as *Morien* faith, a drawing out of Water from the Earth, and again a returning of the fame to the Earth, fo often and fo long till the Earth putrefie.

This.

the Vision of Sir G. Ripley. 17

This dying Toad became forthwith like Coal for colour black:

This is the final end of the Combat, for herein in this Earth of Leaves all are reconciled, and final Peace is made; and now one Nature embraceth another, in no other form but in the form of a Powder impalpable, and in no other colour but black of the blackeft.

From henceforth Natures are united, and boil and bubble together like melted Pitch, and change their forms one into another. Take heed therefore left inftead of Powder Black of the Blackeft, which is the Crows Bill, you have an unprofitable dry half red Precipitate, Orange-coloured, which is a certain fign of the Combustion of Flowers, or Vertue of the Vegetative Seed. On this very Rock I have ftumbled, and do therefore warn you,

.

It

e-

his

B 3

Thus

Thus drowned in his proper Veins of poyfoned Flood.

T appears by all that hath been faid, and by the undoubted Testimony of all Philosophers who have been Eye-witnefles to this Truth, that the work is not fo tedious, nor fo chargeable, but that in the fimple way of Nature the Mastery is to be attained: for when once the true body is Impasted with its true Leven, it doth calcine it felf, and diffolve it felf for the diffolution of the Body into a black and changeable coloured Water, which is the fign of egretfion of the Tincture, is the Congelation of the Spirits into this lowest Period of Obscurity, which is this black Powder like unto Lamp-Black, this is the Complement of Ecliplation, which Contrition begins foon after the Colours, Yellowith, Blewith, &c.

the Vision of Sir G. Ripley. 19.

For term of Eighty Days and Four he rotting stood.

THis Calcination begins with these Variations in Colour about the two and fortieth day, or fiftieth at the fartheft, in a good Regimen : After which comes putrefying Corruption, like to the Scum of boiling bloody Broath or melted Pitch ; but Blackness in part, to wit, Superficial, begins about the fortieth day after the stirring up of the matter, in cafe of right Progress and Regimen of the Fire, or about the fiftieth at farthest. But this drowning of him in his own Poyfon, and stewing him in his own Broath, is the intire Blackness and Cimmerian utter Darkness of compleat Rottenness, which according to the Author, is for the space of eighty four days. This time is not certainly agreed upon by Authors: But in this they all agree, they prescribe to long time until the Complement. One writes, That this Blackeft Black indures a long time, and is not destroyed in less than five months. Another writes, B 4

An Exposition upon

20

writes, That the King when he enters into his Bath pulls off his Robe, and gives it to Saturn, from whom he receives a Black Shirt, which he keeps forty two days : And indeed it is two and forty days before he put on this Black Shirt instead of his Golden Robe, that is, be deftroyed as touching his Solary Qualities, and become instead of Fixt, Citrine, Terrene, and Solid, a Fugitive, Black, Spiritual, Watery, and Flegmatick Subftance : But Putridness begins not till the first Forms be put off; for to long as the Body may be reduced into its former Nature, it is not yet well ground and imbibed : grind therefore and imbibe, till thou fee the Bodies to become no Bodies, but a Fume and Wind, and then cir-culating for a feason, thou shalt see them settle and putrifie.

Saturn then will hold the Earth, which is Occidental, Retentive and Autumnal, in the Weft; then proceed to the North, where Mercury holdeth the Water, where the Matter is Watery and Flegmatick, and it is Winter, and the North expul-

the Vision of Sir G. Ripley. 21 expulsive. But they who divide the Operation into Saturn's Rule, and after him succeeding Jupiter, ascribe to Saturn the whole of Putridness, and to Jupiter the time of variety of Co-After Jupiter, who holds but lours. twenty or two and twenty days, comes Luna, the third Perfon, bright and fair, and the holds twenty good days, fometimes two over and above : In this Computation it is good to count from the fortieth or fiftieth day of the first beginning of the Stone, to the fourteenth or fixteenth day of Jupiter's Reign, wherein in the washing of Laton there is still Blackness, though mixed with variety of gay Colours, which amounteth to the fum of days allowed by the Author in Putrifaction, to wit, Eighty four days. Accounting intire Blackness, with Augurellus, after four times eleven days and nights, which make four and forty : Or, arcording to another Philosopher, which laith, In the first Fifty Days there ap-pears the True Crow, and after it in Threescare and Ten Dayes the White Dove 3

h,

IT, goth

22 An Exposition upon

Dove; and after in Fourscore and Ten Days the Tyrian Colour.

By Tryal then this Venom to expel I did defire ; For which I did commit his Carcass to a gentle Fire.

Which done, a Wonder to the fight, but more to be rehearst; The Toad with Colours rare through every fide was pierc'd.

And white appear'd when all the fundry hews were past; Which after being tinsted, ruddy for evermore did last.

I Shall add my own Sentence: Mix thy two Natures well, and if thy matter be pure, both the Body, and the Water, and the internal Heat of thy Bath as it ought to be, and the external Fire gentle, and not violent; yet fo that the Matter may circulate, the Spiritual

4 An Exposition upon

Then of the Venom handled thus a Medicine I did make, Which Venom kills, and faveth fuch as Venom chance to take.

Thus onely by Decoction thefe Natures are changed and altered fo wonderfully to this blocked Tincture, which expelleth all Poylon, though it felf were a deadly Poylon before the Preparation, yet after, it is the Balfam of Nature, expelling all Difeafes, and cutting them off as it were with one Hook, all that are accidental to Humane, frail Body, which is wonderful.

Glory be to Him the Grantor of fuch fecret Ways 3 Dominion and Honour both, with Worship and with Praise. Amen.

Now GOD only is the Difpenfer of these glorious Mysteries: I have been a true Witness of Nature unto thee, and I know that I write true,

the Vision of Sir G. Ripley: 25 true, and all Sons of Art shall by my Writings know that I am a Fellow-Heir with them of this Divine Skill. To the Ignorant I have wrote fo plain as may be, and more I had written if the Creator of all things had given me larger Commission. Now to Him alone, as is due, be all Honour, and Power, and Glory, who made all things, and giveth knowledge to whom he lifteth of his Servauts, and conceals where he pleaseth : To Him be ascribed, as due is, all Service and Honour. And now, Brother, whoever enjoyeth this rare Bleffing of God, improve all thy ftrength to do him fervice with it, for he is worthy of it, who hath created all things, and for whole fake they were and are created.
